Estimating and Tendering for Construction Work Martin Brook, 2016-12-08 Estimators need to understand the consequences of entering into a contract, often defined by complex conditions and documents, as well as to appreciate the technical requirements of the project. *Estimating and Tendering for Construction Work*, 5th edition, explains the job of the estimator through every stage, from early cost studies to the creation of budgets for successful tenders. This new edition reflects recent developments in the field and covers: new tendering and procurement methods the move from basic estimating to cost-planning and the greater emphasis placed on partnering and collaborative working the New Rules of Measurement (NRM1 and 2), and examines ways in which practicing estimators are implementing the guidance emerging technologies such as BIM (Building Information Modelling) and estimating systems which can interact with 3D design models With the majority of projects procured using design-and-build contracts, this edition explains the contractor's role in setting costs, and design statements, to inform and control the development of a project's design. Clearly-written and illustrated with examples, notes and technical documentation, this book is ideal for students on construction-related courses at HNC/HND and Degree levels. It is also an important source for associated professions and estimators at the outset of their careers.

The New Building Estimator William Arthur,1913

Estimating and Tendering for Civil Engineering Works Ronald McCaffer,Andrew N. Baldwin,1991

Estimating for Building & Civil Engineering Work John Williams,Spence gedes,2013-02-01 It deals in a practical and reasonable way with many of the estimating problems which can arise where building and civil engineering works are carried out and to include comprehensive estimating data within the guidelines of good practice. The early part of the book has been

completely rewritten to contain chapters useful to students and practitioners alike for the development of the estimating process resulting in the presentation of a tender for construction works. The second and major part of the book contains estimating data fully updated for the major elements in building and civil engineering work, including a new chapter on piling, and a wealth of constants for practical use in estimating. The estimating examples are based on the current edition of the Standard Method of Measurement for Building Works (SMM7). The comprehensive information on basic principles of estimating found in 'Spence Geddes' are still as valid today as the first edition. In this edition the prevailing rates of labour and costs of materials are taken whenever possible as a round figure. Readers will appreciate in the construction industry that prices are continually changing, rise and fall, and that worked examples should therefore be used as a guide to method of calculation substituting in any specific case the current rates applicable to it. In the case of plant output dramatic increases have been experienced in productivity over recent years and again estimators with their own records should substitute values appropriate to their work.

Guide to Estimating Practice for Building Work Australian Institute of Building. Practice and Education Board, 1991

The New Building Estimator William Arthur, 2017-11-24 Excerpt from *The New Building Estimator: A Practical Guide to Estimating the Cost of Labor and Material in Building Construction, From Excavation to Finish; With Various Practical Examples of Work Presented in Detail, and With Labor Figured Chiefly in Hours and Quantities; A Handbook for Architects* The field of building is always expanding, and the author and publishers try to keep the *New Building Estimator* abreast of every progressive development. Therefore, in addition to the main part of the book dealing with the standard construction, there are detailed figures on reinforced concrete, and many chapters on Square, Cubic Foot, and Comparative Costs, on Physical Valuation, and Depreciation that serve alike 'for architects, contractors, insurance and other appraisers, and railroad engineers. Many states have already valued their railroads, and the same work has been recommended by high authority for the nation' at large, while all the buildings of great cities like Philadelphia, Cleveland, St. Paul, Denver, etc., have been assessed on a square foot basis. The figures are here put in compact form for the use of all. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
