The Critical Path to Corporate Renewal is a practical and effective agenda for revitalizing the corporation. Through an in depth analysis of six companies that have undergone fundamental changes, the authors describe what works and what doesn't in corporate renewal. Describes the many common errors companies make in getting started. The human sources of competitive advantage--coordination, commitment, and competence--cannot be enhanced through programs. Successful corporate renewal occurs only when plants, divisions, and departments involve employees. That must be done through a carefully designed series of steps--the critical path--led by unit general managers. Companies that have followed this strategy have flatter and less hierarchical organizations, employees who take initiative to reduce costs and improve quality, and enhanced teamwork at all levels.

The thought of G. W. F. Hegel (1770 -1831) has had a deep and lasting influence on a wide range of philosophical, political, religious, aesthetic, cultural and scientific movements. But, despite the far-reaching importance of Hegel's thought, there is often a great deal of confusion about what he actually said or believed. G. W. F. Hegel: Key Concepts provides an accessible introduction to both Hegel's thought and Hegel-inspired philosophy in general, demonstrating how his concepts were understood, adopted and critically transformed by later thinkers. The first section of the book covers the principal philosophical themes in Hegel's system: epistemology, metaphysics, philosophy of mind, ethical theory, political philosophy, philosophy of nature, philosophy of art, philosophy of religion, philosophy of history and theory of the history of philosophy. The second section covers the main post-Hegelian movements in philosophy: Marxism, existentialism, pragmatism, analytic philosophy, hermeneutics and French poststructuralism. The breadth and depth of G. W. F. Hegel: Key Concepts makes it an invaluable introduction for philosophical beginners and a useful reference source for more advanced scholars and researchers.

It addresses social injustices in the field of education, while at the same time questioning traditional standards of critical theory. Drawing on recent social and literary criticism, this collection identifies conversations across disciplines that address the theoretical and methodological challenges in educational debate. "*Critical Theories in Education*" offers a rethinking of Marxist theories of education, joining issues of teaching and pedagogy with issues of the state and economy, social movements, literary criticism, pragmatism and postcolonialism.

This book describes lessons learned from the implementation of research based learning at Maastricht University. Well-known for its problem based learning (PBL) educational model, Maastricht University implemented research-based learning (RBL) as a new educational concept in addition to PBL, around 2009. The model has taken the shape of an excellence programme offering third-year bachelor students an opportunity to conduct academic research together with academic staff. The introduction of the research-based learning concept into the programmes of all Maastricht University's faculties has resulted in a range of RBL models that vary to fit the various disciplines and programmes offered by the faculties. The book first presents theoretical models and a description of the concepts of research-based learning and undergraduate research (UGR). Next, by means of case studies, it describes the formulas developed to suit the various programmes, the challenges encountered, the initial reservations on the part of the staff, the limitations caused by regulations and demands of the curricula, as well as the successes and results of the excellence programme. The disciplines described in the case studies include psychology and neuroscience, knowledge engineering, social and cultural sciences, law, and business and economics.

Islam is considered by many observers to be the fastest growing religion in the world, yet it is the most misunderstood of the world's major faiths. Islamic culture, whose roots plunge deep into the past but which is still alive today, simultaneously developed a conception of the individual and the universe, a philosophy of life and an art of living still attested in the prestigious vestiges of its heritage, which form an integral part of the heritage of humanity. Some misconceptions about Islam stem from calculated propaganda against Islam, but a good amount of it is attributable to the ignorance of many Muslims whose limited knowledge and practice of Islam perpetuates these misconceptions. The Islamic Culture's sociology overwhelms all socio mores of human way of living. The criterion and nature of this society is to regulate the individual's conduct both in person and with other human beings, basing on his Creator's moral fiber for ultimate success. Islamic Studies and Culture covers the classical heritage and Islamic culture, classical Arabic science and philosophy, and Muslim religious sciences, showing continuation of Greek and Persian thought as well as original Muslim contributions. This book provides a detailed and richly illustrated overview of the origins and development of Islam, focusing on its culture throughout history. The contributors to this collection examine many dimensions of life in the Diaspora and demonstrate that identity is always constructed in relation to others. Neither a learned compilation nor an attempt at popularization, this volume focuses on the various aspects of Islamic culture, intended to be a work of a high scientific standard with contributions from eminent scholars in the Islamic world.
