Topical Antimicrobial Testing and Evaluation Daryl S. Paulson,1999-04-27 Providing industry and academia with the ways of getting products approved by the FDA and the means of servicing expanding markets, this work presents and reviews techniques for testing antibacterial compounds. It discusses and illustrates the most effective methods for testing efficacy and safety of preinjection and preoperative washes, healthcare and food service workers' handwashes, and surgical scrubs.

WHO Guidelines on Hand Hygiene in Health Care World Health Organization,2009 The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.

Antibacterial Efficacy of 0.12-percent and 2.0-percent Chlorhexidine Gluconate at 37° C and 46° C Against Enterococcus Faecalis Craig B. D. Thiessen,2010 The purpose of this study was to investigate the antibacterial efficacy of 0.12-percent and 2.0-percent chlorhexidine gluconate (CHX) on eliminating *Enterococcus faecalis* from dentinal tubules, and whether this antibacterial effect was enhanced by heat. To date there have been no published articles that describe the heating of 2.0-percent CHX and its antimicrobial efficacy and clinical relevance towards *E. faecalis* within dentinal tubules in

root canal systems. Ninety-five human extracted, single rooted, maxillary, anterior teeth were used to prepare dentin disk specimens. After proper sterilization, a 2.5-mm ISO-sized diameter lumen was prepared, and then the canals were filled with brain-heart infusion (BHI) broth infected with *E. faecalis*. The BHI was removed and the specimens in equally divided groups were rinsed with sterile saline and filled with saline, or 0.12 percent CHX or 2.0 percent CHX at ambient temperature (24°C) or experimental temperature (46°C) and incubated at oral temperature (37°C) or the experimental temperature (46°C), respectively. The specimens were frozen to -70°C and pulverized in liquid nitrogen. Serial dilutions were prepared of 1:100 and 1:1000 and spiral plated on BHI agar plates in duplicate. They were incubated, and the number of bacterial colonies was recorded 24 hours later for data analysis. A two-way analysis of variance (ANOVA), with factors for solution, solution temperature, and the solution-by-temperature interaction was used to determine antibacterial efficacy. Pair-wise comparisons between groups were examined for significance using the Fisher's Protected Least Significant Differences Method. The *E. faecalis* CFU were log-transformed to satisfy the assumptions required for the ANOVA. The results of this investigation demonstrated no statistically significant difference with the addition of heat to either test irrigation solution regarding the elimination of *E. faecalis* from dentinal tubules within the root canal system. There was a statistically significant difference in the antibacterial efficacy of CHX against *E. faecalis* in comparison with the concentration tested. A higher concentration of 2.0-percent CHX demonstrated a significantly higher antibacterial efficacy against *E. faecalis* compared with 0.12-percent CHX, and likewise with the saline control. It can be concluded that the use of a higher concentration of 2.0-percent CHX is advantageous as a final irrigation solution after copious amounts of NaOCl and EDTA have been utilized for effective antimicrobial efficacy and substantivity.

Science and Technology Against Microbial Pathogens A. Mñndez-Vilas, 2011 The aim of this book is to disseminate the most recent research in science and technology against microbial pathogens presented at the first edition of the ICAR Conference Series (ICAR2010) held in Valladolid, Spain, in November 2010. This volume is a compilation of 86 chapters written by active researchers that offer information and experiences and afford critical insights into anti-microbe strategies in a general context marked by the threat posed by the increasing antimicrobial resistance of pathogenic microorganisms. Anti is here taken in a wide sense as against cell cycle, adhesion, or communication, and when harmful for the human health (infectious diseases, chemotherapy etc.) and industry or economy (food, agriculture, water systems etc.) The book examines this interesting subject area from antimicrobial resistance (superbugs, emerging and re-emerging pathogens etc.), to the use of natural products or microbes against microbial pathogens, not forgetting antimicrobial chemistry, physics and material

science. Readers will find in a single volume, up-to-date information of the current knowledge in antimicrobial research. The book is recommended for researchers from a broad range of academic disciplines that are contributing in the battle against harmful microorganisms, not only those more traditionally involved in this research area (microbiologists, biochemists, geneticists, clinicians etc.), but also experimental and theoretical/computational chemists, physicists or engineers.

Skin Microbiology H.I. Maibach, R. Aly, 2012-12-06 Not since the 1965 publication of *Skin Bacteria and Their Role in Infection* has our knowledge of clinical skin microbiology been reviewed and summarized. In the more than a decade and a half since that publication, we have seen a careful reevaluation of the ideas and information current in 1965 and the development of important new discoveries and information. This volume, *Skin Microbiology: Relevance to Clinical Infection*, reviews developments in the field since 1965 and summarizes the current state of the art in thirty-six carefully prepared chapters. Emphasis is on the clinical perspective rather than straight microbiology, although we include enough of the latter to put the clinical aspects in a proper scientific context. The authors contributing to this volume represent a cross section of authorities in the many specialty areas that contribute to our knowledge of skin microbiology. They include investigators in microbiology, infectious disease, epidemiology, surgery, pediatrics, and dermatology. Significant efforts have been made to minimize repetition and overlap in the various chapters. In some cases, however, information is deliberately repeated in order to provide for the reader a necessary frame of reference. We hope that this volume will be of value to dermatologists, microbiologists, pediatricians, surgeons, public health workers, nurses, and others involved in the diagnosis and treatment of dermatologic problems caused by bacteria. The editors acknowledge with appreciation the assistance of Drs. A. Allen, F. Marzulli, F. Engley, G. Hildick-Smith, A. Kligman, M. Bruch, H. Eiermann, and D. Taplin.

The Efficacy Of Herbal Mixtures On Some Bacteria. Staphylococcus aureus and Streptococcus pyogene

Bamidele Ijigbade,2023-01-26 Project Report from the year 2023 in the subject Biology - Micro- and Molecular Biology, grade: 4.27, University Of Abuja (FACULTY OF SCIENCE), course: MICROBIOLOGY, language: English, abstract: This study is on the efficacy of herbal mixtures on some selected bacteria, Staphylococcus aureus and Streptococcus pyogene was conducted. The zone diameter of inhibition in millimeter of Aqueous extracts of herbal mixture at concentration of 500 mg/ml against Staphylococcus aureus shows that Herbal mixture met the standard of the antibiotic used as the positive control (Chloramphenicol) with 25.0 ± 1.0 mm each. Meanwhile Streptococcus pyogene had significant zone diameter of inhibition (24mm against the herbal mixtures) at concentration of 500mg/ml. The extracts of the herbal mixture had the minimum inhibition concentration (MIC) of 200 mg/ml against Staphylococcus aureus and which correlate with the control (Chloramphenicol), while the MIC of 400 mg/ml against Streptococcus pyogene respectively. The Minimum bactericidal concentration of the extracts shows that the herbal mixtures have the least value of 400 mg/ml which correlates with the standard antibiotic (Chloramphenicol) used as control against Streptococcus pyogene. The Herbal mixture had MBC of 400 mg/ml which also correlates with the standard antibiotics drug (Chloramphenicol).

Spices Act as a Natural Antimicrobial in Chicken Meat System Shekhar Badhe,Fairoze Nadeem,Md. Nadeem

Fairoze,2013 Consumers generally preferred fresh meat without refrigeration. In addition, considering the prevailing conditions at the retail outlets, contamination of the meat with microbes appears unavoidable. Hence, high bacterial load is expected in the meat sold at the retail outlets mainly due to lack of awareness towards hygienic conditions and poor infrastructure in the retail outlets. Hence, practices such as incorporation of antibiotics, chemical preservatives, antimicrobial compounds have been tried. Increasing incidences of some pathogens connected to food borne illness acquiring antibiotic resistance has been a worry. This perspective has put pressure on the food industry for progressive removal of chemical preservatives and adoption of natural alternatives to achieve the goal concerning microbial food safety. Herbal spices have been added to foods since ancient times, not only as flavouring agents, but also as folk medicine and food preservatives . Scarce information is available regarding their use as antimicrobial in meat industry. Hence, this study has been designed to high light the efficacy of some of the spices as antimicrobial in chicken meat system.

clinical microbiology laboratory is often a sentinel for the detection of drug resistant strains of microorganisms. Silver in Healthcare Alan B. G. Lansdown, 2010-05-07 Silver in healthcare has many different facets and since the early concepts of microbiology of the 1880's, has been developed from usage in surgical clips, staples, foil wound dressings and surgical implants, to the widespread and clinically effective antiseptic wound dressings, sutures, catheters, bone and dental implants, and cardiovascular devices of today. From the dawn of human civilisation, silver has had a role of water purification and even now has a role in hospital water systems for control of MRSA and legionnaires disease. Biotechnological advances in recent years have extended the antimicrobial properties of silver into production of hygiene textiles and use in domestic products. Important advances have been made in understanding mechanisms of antimicrobial action of silver, the central importance of ionisation patterns in the presence of body fluids and secretion, and the genetical and molecular profiles of silver resistance. This publication is a comprehensive account of the history of silver in medicine, its clinical benefits and wide advantages as a broad spectrum antimicrobial agent. It is clear from the extensive array of publications in recognised and unofficial press, that many misconceptions and misleading conceptions have been perpetuated, leading to errors in evaluation of the safety of the metal in occupational, domestic and therapeutic situations. The book is unique in that it is the only comprehensive presentation of the toxicology of silver and it identifies the major misconceptions in the safety of silver and interpretation of argyria and argyrosis as central features of silver toxicity. In this book, Dr Lansdown reviews the literature from a clinical and experimental viewpoint, with the benefit of his many years research on silver and experience gained in working with clinicians, healthcare product manufacturers and microbiologists. There is also discussion in the book on the relevance of antimicrobial resistance to silver and deficiencies in present day clinical practice in not evaluating incidences of resistance on a routine basis. The subject matter is presented in a readable fashion and includes reference to use of the metal in such practices as acupuncture and treatment of tropical diseases as practised in some parts of the world, each of which is accompanied by special clinical risk. It is also a collation of current views on the use and efficacy of silver as a broad spectrum antibiotic. The chapters which deal specifically with toxicological aspects of silver in clinical, occupational and environmental issues are central to the book's value. The book is aimed at clinicians, research scientists and product manufacturers and will provide ideas for new research and academic endeavour. It is also essential reading for research students with an interest in metal toxicity and its management in mammalian tissues.
