"Every teacher, every student of history, every citizen should read this book. It is both a refreshing antidote to what has passed for history in our educational system and a one-volume education in itself." —Howard Zinn A new edition of the national bestseller and American Book Award winner, with a new preface by the author Since its first publication in 1995, *Lies My Teacher Told Me* has become one of the most important—and successful—history books of our time. Having sold nearly two million copies, the book also won an American Book Award and the Oliver Cromwell Cox Award for Distinguished Anti-Racist Scholarship and was heralded on the front page of the *New York Times*. For this new edition, Loewen has added a new preface that shows how inadequate history courses in high school help produce adult Americans who think Donald Trump can solve their problems, and calls out academic historians for abandoning the concept of truth in a misguided effort to be "objective." What started out as a survey of the twelve leading American history textbooks has ended up being what the *San Francisco Chronicle* calls "an extremely convincing plea for truth in education." In *Lies My Teacher Told Me*, James W. Loewen brings history alive in all its complexity and ambiguity. Beginning with pre-Columbian history and ranging over characters and events as diverse as Reconstruction, Helen Keller, the first Thanksgiving, the My Lai massacre, 9/11, and the Iraq War, Loewen offers an eye-opening critique of existing textbooks, and a wonderful retelling of American history as it should—and could—be taught to American students.

Why Teaching Matters is an introductory guide to core elements of teaching, getting to the heart of what teaching is, and why it matters. Paul Farber and Dini Metro-Roland introduce the following 8 elements which encompass the many issues, themes and social complexities of teaching: - Conveying Care - Enacting Authority - Cultivating Virtue - Interpreting Subject matter - Rendering Judgment - Articulating Purpose - Establishing a Sense of Place - Engaging Presence The focus on the elements of practice frames discussion of teaching as an essential human activity and highlights the kinds of significant issues that teachers face, including technology, social inequality, and the management and evaluation of their work. As a philosophical guide, it introduces and draws upon a range of thinkers, including Nel Noddings, Hannah Arendt, Hans-Georg Gadamer, Danielle Allen, and James Baldwin whose work informs a deeper understanding of teaching. The theoretical discussions are grounded with examples and anecdotes from the classroom so that theory is always connected with practice, and questions for further inquiry appear at the end of each chapter. Intended for students of education and for new and experienced teachers alike, as well as anyone interested in the impact of teaching, *Why Teaching Matters* explores the inherent complexity and challenges of teaching, offering a comprehensive account of the many ways in which teaching matters.

The account of one radically new school year for a Teacher of the Year and for his nonbinary, art-obsessed, brilliant child Seven-year-old Ollie was researching local advanced school programs—because every second grader does that, right? Ollie, who used to hate weekends because they meant no school, was crying on the way to school almost every day. Sure, there were the slings and arrows of bullies and bad teachers, but, maybe worse, Ollie, a funny, anxious, smart kid with a thing for choir and an eye for graphic art, was gravely underchallenged and also struggling with identity and how to live totally as themselves. Ollie begged to switch to a new school with "kids like me," where they

wouldn't feel so alone, or so bored, and so they made the change. Raising Ollie is dad Tom Rademacher's story (really, many stories) of that eventful and sometimes painful school year, parenting Ollie and relearning every day what it means to be a father and teacher. As Ollie—who is nonbinary and uses they/them pronouns, and prefers art to athletics, vegetables to cake, and animals to most humans—flourishes in their new school, Rademacher is making an eye-opening adjustment to a new school of his own, one that's whiter and more suburban than anywhere he has previously taught, with a history of racial tension that he tries to address and navigate. While Ollie is learning to code, 3D model, animate, speak Japanese, and finally feel comfortable at school, Rademacher increasingly sees how his own educational struggles, anxieties, and childhood upbringing are reflected in his teaching, writing, and parenting, as well as in Ollie's experience. And with this story of one anything-but-academic year of inquiry and wonder, doubt and revelation, he shows us how raising a kid changes everything—and how much raising a kid like Ollie can teach us about who we are and what we're doing in the world.

Cris describes the systems and structure she uses in her own classroom and shows teachers how to use assessments to monitor student growth and provide targeted feedback that enables students to master content goals. She also shares ways to bring students into the assessment cycle so they can monitor their own learning, maximizing motivation and engagement. *So What Do They Really Know?* includes a wealth of information: Lessons from Cris's classroom Templates showing how teachers can use the workshop model to assess and differentiate instruction Student work, including samples from linguistically diverse learners, struggling readers, and college-bound seniors Anchor charts of student thinking Ideas on how to give feedback Guidelines that explain how conferring is different from monitoring Suggestions for assessing learning and differentiating instruction during conferences Advice for managing ongoing assessment Cris's willingness to share her own struggles continues to be a hallmark of her work. Teachers will recognize their own students and the challenges they face as they join Cris on the journey to figure out how to raise student achievement.

Your graduate work was on bacterial evolution, but now you're lecturing to 200 freshmen on primate social life. In this practical and funny book, an experienced teaching consultant offers many creative strategies for dealing with typical problems. Original, useful, and hopeful, this book reminds you that teaching what you don't know, to students whom you may not understand, is not just a job. It's an adventure.

The innovative strategies presented in this volume will give you a bag of tools to help your students achieve higher-level learning.

Miriam, a freshman Calculus student at Louisiana State University, made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third—These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple, straightforward strategies to use, they can significantly increase their learning and performance. For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years, ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Sandra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

Forewords by Professor Robert Bjork and Emeritus Professor Dylan William. What would you do differently if your most cherished beliefs about education turned out to be wrong? This is a book about teaching but is not a manual on how to teach. It's a book about ideas but is not ideological. It is a book about thinking and questioning and challenging. Much of what we believe about education is unexamined. In iconoclastic style, David Didau scours current thinking on education to expose bad ideas masquerading as common sense before presenting an alternative view on how we might think about teaching. The main thing Didau believes we're wrong about is the belief that we can see learning. Like many other beliefs in education this is so deeply embedded in the way we see the world we don't even think about it: it is a self--evident truth. Pretty much every lesson taught by every teacher in every school depends on the idea that we can see learning happen. But if we're wrong about this, what else might we be wrong about? If it's true that learning is invisible, where does that leave Assessment for Learning, lesson observation and the whole concept of 'outstanding' teaching? Didau suggests an alternative to the quick fix culture so prevalent in schools: making learning deliberately difficult. He considers the perceptual and cognitive illusions that keep us in the dark. And presents an alternative understanding of learning and progress. He also introduces the science of how people really learn and suggests ways to implement this approach in schools. And examines the consequences of shifting our understanding of how learning occurs and discusses some of the mistakes we've made about marking, differentiation, motivation and creativity.

The average American high school student spends over 5000 hours in school during the four years it takes to earn a high school diploma. They interact with countless adults throughout this experience, but are they ever truly known? This question echoed through Michelle Muller's mind for weeks as she struggled to adjust to her first year teaching 10th grade English in the urban core of Kansas City, MO. On a whim one morning, she decided to make sure that every student in her class had the opportunity to be known and understood. What followed was something she never could have predicted, and it absolutely transformed the culture of her classroom. With her students' permission, she is now giving voice to the honest beauty of their work in hopes that others will be just as inspired to love their neighbor with the reckless abandon required to heal a community one life at a time.

Gabbie's story needs to be shouted from the rooftops. She very eloquently shows us why and how education needs to change...Teacher made me laugh and cry. I loved it! - Kathy Margolis, former teacher and activist. Watching children learn is a beautiful and extraordinary experience. Their bodies transform, reflecting inner changes. Teeth fall out. Knees scab. Freckles multiply. Throughout the year they grow in endless ways and I can almost see their self-esteem rising, their confidence soaring, their small bodies now empowered. Given wings. They fall in love with learning. It is a kind of magic, a kind of loving, a kind of art. It is teaching. Just teaching. Just what I do. What I did. Past tense. In 2014, Gabrielle Stroud was a very dedicated teacher with over a decade of experience. Months later, she resigned in frustration and despair when she realised that the Naplan-test education model was stopping her from doing the very thing she was best at: teaching individual children according to their needs and talents. Her ground-breaking essay 'Teaching Australia' in the Feb 2016 Griffith Review outlined her experiences and provoked a huge response from former and current teachers around the world. That essay lifted the lid on a scandal that is yet to properly break - that our education system is unfair to our children and destroying their teachers. In a powerful memoir inspired by her original essay, Gabrielle tells the full story: how she came to teaching, what makes a great teacher, what our kids need from their teachers, and what it was that finally broke her. A brilliant and heart-breaking memoir that cuts to the heart of a vital matter of national importance.

This book is designed to provide new teachers with practical, theory-based approaches to becoming professional, confident, and skilled classroom instructors, with emphasis on the social and communication skills needed to deal appropriately with students, parents, colleagues, administrators, and the public.

In addition to having my own successful yoga career I also offer mentoring to yoga teachers who are just starting out. For newly qualified teachers the transition to the world of teaching can be tricky. So it became a desire of mine to see more teachers gain classes, build a solid client base and organise successful workshops and retreats. I have seen many teachers thrive on the advice I gave them, and it inspired me to share my knowledge in this book so more people can experience this progress. In the space of a few short years, I have seen my career as a yoga teacher take off: I run fully booked classes in top yoga studios, have become a brand ambassador for international companies, been flown to exotic locations to teach workshops and privates, and I earn a passive income through online video downloads. I am not telling you this to impress you. I want you to know that if I can do it, so can you! I do not think of myself as a finished product, but what has worked for me, I want YOU to know too. In this book I share everything I did to get to where I am. I can't wait to see you happy and fulfilled in your yoga teaching career!
