A breathtaking detective story, this book charts the adventure of Whitehead's ideas in a remarkably detailed and careful reconstruction of his metaphysical views. Incorporating heretofore unpublished material from students' notes and correspondence, Professor Ford analyzes the order of composition of various portions of Whitehead's books, principally *Science and the Modern World*, *Religion in the Making*, and *Process and Reality*. Ford's reconstructive method is perfectly tailored to his subject, for Whitehead revised by inserting new material rather than altering or deleting the old. Thus Ford is able to date the sequence of the composition of many passages. In distinguishing these layers of articulation, he has pushed the techniques of "higher criticism" beyond anything the French structuralists and deconstructionists have dreamed of and chronicled an extraordinary intellectual biography.

The aim of this book is to integrate geological and geophysical information to provide a better understanding of the evolution of the Weddell Sea and Gondwana, and of the processes associated with their formation. The topics addressed include: the history of floor-spreading in the Weddell Sea; the origin and nature of continent/ocean boundaries; the kinematic history of crustal shear and fault zones related to Weddell Sea evolution; Gondwana break-up processes; and the initial rifting history in the Weddell Sea area.

This work highlights how the costs and CO₂-emissions of land-based wind turbines can be reduced by means of an innovative and material efficient support structure concept. Thereby the yaw system is placed at the tower base, allowing the whole wind turbine tower to be rotated. The potential

of a rotatable inclined lattice tower concept was analysed by means of aero-servo-elastic load simulations in the FAST environment. A balance between different cost aspects revealed significant savings.

Questo testo tratta i criteri e le metodologie che presiedono alla scelta, progettazione e realizzazione degli impianti industriali, evidenziando quegli elementi fondamentali che sono comuni a tutti i sistemi produttivi, indipendentemente dal particolare processo tecnologico, che in esso si attua. Dopo lo studio di fattibilità, sviluppato nei suoi momenti fondamentali di studio del mercato e del prodotto, scelta del processo e dei servizi, scelta delle potenzialità e valutazione economica dell'iniziativa, vengono trattati con ampie esemplificazioni i passi successivi della progettazione e realizzazione dell'impianto con la determinazione delle aree di processo e del layout generale e dettagliato dell'impianto, la scelta e l'organizzazione delle attrezzature produttive, la definizione dei tempi di realizzazione con impiego di tecniche reticolari. Una sintesi sulle linee di tendenza dell'automazione nei sistemi produttivi completa il volume. L'obiettivo è quello di fornire soprattutto agli studenti dei corsi universitari dell'area di produzione o gestionale ma anche ai tecnici, operanti nella realtà industriale, una visione organica delle tematiche riguardanti la pianificazione dei sistemi produttivi, che

costituiscono la base indispensabile per affrontare correttamente anche i connessi problemi della gestione della produzione industriale. La trattazione, corredata, ovunque possibile, di approcci quantitativi supportati da idonei strumenti matematici, vuole anche costituire un punto di sintesi delle varie trattazioni esistenti sull'argomento spesso parziali e condotte a volte a livello prevalentemente qualitativo. The book presents for the first time a critical edition of all the extant fragments of the Chronographiae by Iulius Africanus. This work is the first Christian world chronicle – a wide-ranging attempt to combine Classical Hellenistic historiography with the Jewish Hebrew heritage and integrate them into a Christian world-view.

Recent Trends in Cold-Formed Steel Construction discusses advancements in an area that has become an important construction material for buildings. The book addresses cutting-edge new technologies and design methods using cold-formed steel as a main structural material, and provides technical guidance on how to design and build sustainable and energy-efficient cold-formed steel buildings. Part One of the book introduces the codes, specifications, and design methods for cold-formed steel structures, while Part Two provides computational analysis of cold-formed steel structures. Part Three examines the structural performance of cold-formed steel buildings and

reviews the thermal performance, acoustic performance, fire protection, floor vibrations, and blast resistance of these buildings, with a final section reviewing innovation and sustainability in cold-formed steel construction. Addresses building sciences issues and provides performance solutions for cold-formed buildings Provides guidance for using the next generation design method, computational tools, and technologies Edited by an experienced researcher and educator with significant knowledge on new developments in cold-formed steel construction

Antarctica is the center from which all surrounding continental bodies separated millions of years ago. Antarctica: A Keystone in a Changing World, reinforces the importance of continual changes in the country's history and the impact of these changes on global systems. The book also places emphasis on deciphering the climate records in ice cores, geologic cores, rock outcrops and those inferred from climate models. New technologies for the coming decades of geoscience data collection are also highlighted. Antarctica: A Keystone in a Changing World is a collection of papers that were presented by keynote speakers at the 10th International Symposium on Antarctic Earth Sciences. As A. Scott Berg says: 'You can't understand the United States in the twentieth century without understanding Woodrow Wilson' From Pulitzer Prize-winning author, A. Scott Berg, comes the definitive and revelatory biography of one of the greatest American figures of our time. One hundred years after his inauguration, Woodrow Wilson still stands as one of the most influential figures of the twentieth century, and one of the most enigmatic. And now, after more than a decade of research and writing, Pulitzer Prize-winning author A. Scott Berg has completed Wilson- the most personal and

penetrating biography ever written about the 28th President. In addition to the hundreds of thousands of documents in the Wilson Archives, Berg was the first biographer to gain access to two recently-discovered caches of papers belonging to those close to Wilson. From this material, Berg was able to add countless details - even several unknown events - that fill in missing pieces of Wilson's character and cast new light on his entire life. From the scholar-President who ushered the country through its first great world war to the man of intense passion and turbulence, from the idealist determined to make the world 'safe for democracy', to the stroke-crippled leader whose incapacity, and the subterfuges around it, were among the century's greatest secrets, the result is an intimate portrait written with a particularly contemporary point of view - a book at once magisterial and deeply emotional about the whole of Wilson's life, accomplishments and failings. This is not just Wilson the icon - but Wilson the man. Praise for Lindbergh: 'Berg turns that historic flight into a cogent and thoroughly gripping account that conveys all the magic, danger and courage of the young pilot's achievement' Michiko Kakutani, New York Times 'An extraordinary achievement . . . the definitive account of a dramatic and disturbing American story' Los Angeles Times Book Review 'An astonishing biography of a man who personified the future tense, no sentence is overwritten, no passage overwrought' Boston Sunday Globe

On 23 November 1943, 100 (Bomber Support) Group of RAF Bomber Command was formed. The object was to consolidate the various squadrons and units that had been fighting a secret war of electronics and radar countermeasures, attempting to reduce the losses of the heavy bombers—and their hard pressed crews—in Bomber Command. This secret war involved the use of air and ground radars, homing and jamming equipment, special radio and navigational aids, and intruding night-fighters to seek out and destroy their opposite numbers, the Ju 88s and Bf 110s of the Nachtjagdgeschwader who defended the night skies of the Third Reich with ever increasing success. The book contains many first-hand accounts from pilots and crew and provides a fascinating record of 100 Group's wartime history. Much has changed in European constitutional law after the Lisbon Treaty, not least the efforts to

increase democratic legitimacy by engaging national legislatures and introducing a stricter subsidiary review process, namely the Early Warning Mechanism (EWM). This collection looks at how national parliaments have adapted to their new roles and looks at how the new system has impacted on relations between the EU legislative bodies and national parliaments. A team of experts from across Europe explore the effect of the EWM on the national constitutional orders; analyse the regional impact of EWM and evaluate the new system of scrutiny.
