Nursing Notes the Easy Way 100+ Common Nursing Documentation and Communication Templates

Improving Nursing Documentation and Reducing Risk Patricia A. Duclos-Miller, MSN, RN, NE-BC In the age of electronic health records (EHR) and value-based purchasing, accurate and complete nursing documentation is crucial. Proper documentation affects not only quality of care, but also facilities' costs and revenues. Redundant documentation wastes time and money, while inadequate documentation negatively affects Joint Commission core measures and can result in license suspensions or legal action against a healthcare facility--an expensive and often damaging outcome. Improving Nursing Documentation and Reducing Risk helps nurse managers create policies, processes, and ongoing auditing practices to ensure that complete and accurate documentation is implemented by their staff, without creating additional time burdens. Nurse managers, especially new nurse managers, do not clearly understand

their legal accountability for poor or inadequate documentation created by nursing staff who report to them. While each state's nurse practice act (NPA) differs, every NPA addresses nursing liability for documentation; however, many nurse managers remain unaware of these and other regulations that hold them accountable for the documentation crafted by their nurses. This book helps nurse managers protect themselves and their staff by clearly explaining to their employees the impact of documentation practices on reimbursement, educating them on the consequences of failure to document, and training them on how to document properly. This book will help you: Work directly with your staff to ensure accurate documentation Train nurses during orientation Educate your staff on the consequences of inaccurate documentation Create steps to share with your staff that will improve documentation Ensure complete comprehension of documentation issues through sample forms, auditing tools, and case studies

With all the training and education nurses receive, there is little true explanation about the importance of documentation. Even in today's litigious culture and the backlash of services no longer reimbursable -- it is crucial we as nurses understand the rationale for our documentation practices. By creating specific systems to ensure license protection, we in turn provide more effective hand- off communication. Every nurse knows it's the law and that you don't want to lose your license, but do we really know why the methods of documentation are so vital to our livelihood? Has the electronic medical record made this approach additionally arduous? Do the questions on the EMR provide an accurate picture of the actual care provided? Often times, these reports are not clear or complete. Through fictional and non-fictional stories, Rosale Lobo reveals proper nursing documentation techniques providing clarity and important best practice concepts that can be applied immediately. Extraneous situations will arise in nursing, making it imperative to develop intentional methods of documentation. By putting together an effective system you will decrease your chances of being sued. For the future of nursing documentation, the EMR is not the answer, a personal system of accountability is.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for
