Keith McCord recounts the history of automotive onboard diagnostic systems and creation of the rudimentary OBD I systems and the development as well as the evolution of OBD II. Currently, OBD-II (OnBoard Diagnostic II) is the standard of the industry, and this book provides a thorough explanation of this system. It details its main features, capabilities, and characteristics. It shows how to access the port connector on the car, the serial data protocols, and what the serial data means. To understand the diagnostic codes, the numbering system is defined and the table of common DTCs is shown. But most importantly, McCord provides a thorough process for trouble shooting problems, tracing a problem to its root, explaining why DTCs may not lead to the source of the underlying problem, and ultimately resolving the problem. A daring, deep investigation into ethnographic cinema that challenges standard ways of writing film history and breaks important new ground in understanding archives Bad Film Histories is a vital work that unsettles the authority of the archive. Katherine Groo daringly takes readers to the margins of the film record, addressing the undertheorization of film history and offering a rigorous corrective. Taking ethnographic cinema as a crucial case study, Groo challenges standard ways of thinking and writing about film history and questions widespread assumptions about what film artifacts are and what makes them meaningful. Rather than filling holes, Groo endeavors to understand the imprecisions and absences that define film history and its archives. Bad Film Histories draws on numerous works of ethnographic cinema, from Edward S. Curtis's In the Land of the Head Hunters, to a Citroën-sponsored "croisière" across Africa, to the extensive archives of the Maison Lumière and the Musée Albert-Kahn, to dozens of expedition films from the 1910s and 1920s. The project is deeply grounded in poststructural approaches to history, and throughout Groo draws on these frameworks to offer innovative and accessible readings that explain ethnographic cinema's destabilizing energies. As Groo describes, ethnographic works are mostly untitled, unauthored, seemingly infinite in number, and largely unrestored even in their digital afterlives. Her examination of ethnographic cinema provides necessary new thought for both film scholars and those who are thrilled by cinema's boundless possibilities. In so doing, she boldly reexamines what early

ethnographic cinema is and how these films produce meaning, challenging the foundations of film history and prevailing approaches to the archive.

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right. This is the third edition of CSA B335, superseding the previous editions- 2004 and 1994. This Standard specifies the key elements of a lift truck safety program and also provides recommended qualifications for lift truck trainers and maintenance technicians and personnel.
