In the wake of the financial crises of the late 1990s, there was a surge of interest in the systematic assessment of financial sectors, with a view to identifying vulnerabilities and evaluating the sector's developmental needs. Consequently, there has been an increased demand from financial sector authorities in many countries for information on key issues and sound practices in the assessment of financial systems and the appropriate design of policy responses. In response, Financial Sector Assessments presents a general analytical framework and broad guidance on approaches, methodologies and key techniques for assessing the stability and development needs of financial systems. It synthesizes current global sound practices in financial sector assessment.

The central theme of this collection is the epistemological status of constraints and preferences in linguistics. The contributions focus mainly on phonology; one article deals explicitly with morphology. The approaches to phonology represented in the volume are those of Natural Phonology, Government Phonology, Optimality Theory, autosegmental phonology, and computational phonology. Constraints are juxtaposed either to rules or to preferences in the discussion of constraint-based vs. preference-based theories.

The originator of the Gaia theory offers the vision of a future epoch in which humans and artificial intelligence together will help the Earth survive. James Lovelock, creator of the Gaia hypothesis and the greatest environmental thinker of our time, has produced an astounding new theory about future of life on Earth. He argues that the Anthropocene—the age in which humans acquired planetary-scale technologies—is, after 300 years, coming to an end. A new age—the Novacene—has already begun. In the Novacene, new beings will emerge from existing artificial intelligence systems. They will think 10,000 times faster than we do and they will regard us as we now regard plants. But this will not be the cruel, violent machine takeover of the planet imagined by science fiction. These hyperintelligent beings will be as dependent on the health of the planet as we are. They will need the planetary cooling system of Gaia to defend them from the increasing heat of the sun as much as we do. And Gaia depends on organic life. We will be partners in this project. It is crucial, Lovelock argues, that the intelligence of Earth survives and prospers. He does not think there are intelligent aliens, so we are the only beings capable of understanding the cosmos. Perhaps, he speculates, the Novacene could even be the beginning of a process that will finally lead to intelligence suffusing the entire cosmos. At the age of 100, James Lovelock has produced the most important and compelling work of his life. Becoming operational in 2007, the Basel Capital Accord initiative is an effort to bring order to international capital markets and level the playing field for banks. Bottom line, officials hope to align capital with the risks faced by banks. However, despite the worldwide endorsements by regulators, the Accord may not be the "sure thing" everyone hopes it will be. It is very costly to implement and is not suitable for all banks. The question remains, though: Will it succeed? Gathering perspectives from the top minds in the field of international banking and finance, Gup's intriguing book *The New Basel Capital Accord* offers authoritative, provocative, and practical discussion and analysis of the impact of the Accord and discusses new opportunities for regulatory arbitrage.

This is the first volume in a new series on 'Great Minds in Regional Science,' which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science. It presents, among others, Walter Isard, Martin Beckmann and Gunnar Myrdal. Each contribution combines factual biographical information, a description of their major contributions, and a discussion of the broader context of the work, as well as an assessment of its current relevance, scientific recognition and policy impact. The book attempts to fill a gap in our knowledge, and to respond to the growing interest in the formation and development of the field of regional science and its key influential figures.

A Tax Control Framework (TCF) is the part of the system of internal control that assures the accuracy and completeness of the tax returns and disclosures made by an enterprise. The TCF plays a central part in bringing rigour to the co-operative compliance concept. The objective of this report is to provide guidance that is meant to be helpful for businesses to design and operate their TCFs and for revenue bodies to adjust the risk management strategy for an individual large business in the context of a (voluntary) co-operative compliance relationship as laid out in the FTA report Study into the Role of Tax Intermediaries (OECD, 2008), the 2013 report, and the September 2013 BIAC Statement of Tax Principles for International Business (see Annex A). The broad conclusions of this report are that when the tax control framework of a multinational enterprise participating in cooperative compliance programme is determined to be effective, and when the enterprise provides complete disclosures that include relevant information and tax risks and is transparent to the revenue body, the extent of reviews and audits of the returns submitted to it can be reduced significantly. In these circumstances, the revenue body may rely on the returns submitted to it and trust that uncertain tax positions and other problematic tax positions taken in that return will be brought to its attention.

In works by filmmakers from Bertolucci to Spielberg, debauched images of nazi and fascist eroticism, symbols of violence and immorality, often bear an uncanny resemblance to the images and symbols once used by the fascists themselves to demarcate racial, sexual, and political others. This book exposes the "madness" inherent in such a course, which attests to the impossibility of disengaging visual and rhetorical constructions from political, ideological, and moral codes. Kriss Ravetto argues that contemporary discourses using such devices actually continue unacknowledged rhetorical, moral, and visual analogies of the past. Against postwar fictional and historical accounts of World War II in which generic images of evil characterize the nazi and the fascist, Ravetto sets the more complex approach of such filmmakers as Pier Paolo Pasolini, Liliana Cavani, and Lina Wertmuller. Her book asks us to think deeply about what it means to say that we have conquered fascism, when the aesthetics of fascism still describe and determine how we look at political figures and global events. John Maynard Keynes (1883-1946) was the most influential economist of the first half of the twentieth century. During both world wars he was an adviser to the British treasury, and his theory of government

stimulation of the economy through deficit spending influenced Franklin D. Roosevelt's "New Deal" administration. The mass unemployment caused by the Great Depression inspired his most famous work, *General Theory of Employment, Interest and Money* (1935-36). Keynes first gained widespread prominence immediately following World War I, when he attended the Versailles peace conference as an economic adviser to British Prime Minister David Lloyd George. Disgusted with the harshly punitive and unrealistic provisions of the Versailles Treaty, as well as the political chicanery and general incompetence of the chief participants, he published *The Economic Consequences of the Peace* in 1919. This book gained a good deal of notoriety because of its withering portraits of both French premier Georges Clemenceau and U.S. President Woodrow Wilson. Keynes described Clemenceau as motivated only by shortsighted nationalistic goals and vindictiveness, which aimed at crippling Germany for generations no matter what the consequences to the rest of Europe. He found fault with Wilson for his ivory tower idealism, lack of diplomatic savvy, and unfamiliarity with the political realities of Europe. This ineffectual combination ultimately dashed his best hopes for a League of Nations and a just resolution to the war in Europe. In a point-by-point analysis Keynes makes clear the ruinous consequences of the treaty to all of Europe and proposes substantial modifications. Unfortunately, few appreciated Keynes's prescience, and he saw his worst fears realized in the rise of Hitler and the devastation of World War II. In *The End of Laissez-Faire* (1926) he presents a brief historical review of laissez-faire economic policy. Though he agrees in principle that a marketplace of free individuals pursuing their own self-interest without government interference has a better chance of improving society's economic situation than socialist alternatives, he suggests that government can play a constructive role in protecting individuals from the worst harms of capitalism's cycles, especially as concerns unemployment. Other useful government functions are the dissemination of information relating to business conditions, encouraging savings and investment along "nationally productive channels," and forming a national policy about the size of population. Keynes's brilliant mind and lucid writing are evident on every page. Both of these works are still well worth reading for his many stimulating ideas and profound knowledge of economics.

Uncertainty is interwoven into human existence. It is a powerful incentive in the search for knowledge and an inherent component of scientific research. We have developed many ways of coping with uncertainty. We make promises, manage risks and make predictions to try to clear the mists and predict ahead. But the future is inherently uncertain - and the mist that shrouds our path an inherent part of our journey. The burning question is whether our societies can face up to uncertainty, learn to embrace it and whether we can open up to a constantly evolving future. In this new book, Helga Nowotny shows how research can thrive at the cusp of uncertainty. Science, she argues, can eventually transform uncertainty into certainty, but into certainty which remains always provisional. Uncertainty is never completely static. It is constantly evolving. It encompasses geological time scales and, at the level of human experience, split-second changes as cells divide. Life and death decisions are taken in the blink of the eye, while human interactions with the natural environment may reveal their impact over millennia. Uncertainty is cunning. It appears at unexpected moments, it shuns the straight line, takes the oblique route and sometimes the unexpected short-cut. As we acknowledge the cunning of uncertainty, its threats retreat. We accept that any scientific inquiry must produce results that are provisional and uncertain. This message is vital for politicians and policy-makers: do not be tempted by small, short-term, controllable gains to the exclusion of uncertain, high-gain opportunities. Wide-ranging in its use of examples and enriched by the author's experience as President of the European Research Council, one of the world's leading funding organisations for fundamental research. *The Cunning of Uncertainty* is a must-read for students and scholars of all disciplines, politicians, policy-makers and anyone concerned with the fundamental role of knowledge and science in our societies today.

The series *UFO: Explorations of Urbanism* aims to fill a gap in the contemporary debate concerning urbanism by offering case studies that document and critically analyze a global spectrum of changing urban conditions in interaction with the continuous adaptation of urbanism and offer alternatives to contemporary mainstream urban projects. *Water and Asphalt*, the latest volume in the series, investigates the metropolitan area of Venice with regard to the increasing separation of residential and industrial neighborhoods. The densely populated region, criss-crossed by networks of roads and waterways, provides the ideal the test case for imagining the concept termed by this study as the "Project of Isotropy." The researchers argue that conditions now exist for re-devising the isotropic space in Venice with a focus on the water system, roads and public transport, alternative mobility, forms of diffused welfare, innovative agriculture, and the decentralized production of energy.

A landmark biography of the most famous Italian journalist of the twentieth century, an inspiring and often controversial woman who defied the codes of reportage. Oriana Fallaci is known for her uncompromising vision. To retrace Fallaci's life is to retrace the course of history from World War II to 9/11. As a child, Fallaci enlisted in the Italian Resistance alongside her father, and her hatred of fascism and authoritarian regimes remained strong throughout her life. Covering the entertainment industry early in her career, she created an original, abrasive interview style, focusing on her subjects' emotions, contradictions, and facial expressions more than their words. When she grew bored with movie stars and directors, she turned her attention to the international political figures of the time—Khomeini, Gaddafi, Indira Gandhi, Kissinger—always placing herself front and center in the story. Also a war reporter working wherever there was conflict, she would provoke controversies that became news themselves. With unprecedented access to personal records, Cristina De Stefano brings to life this remarkable woman whose groundbreaking work and torrid love affairs are not easily forgotten. Oriana Fallaci allows a new generation to discover her story and witness the passionate, unstinting journalism so urgently needed in these times of upheaval and uncertainty.

Music therapy is recognised as being applicable to a wide range of healthcare and social contexts. Since the first edition of Music Therapy: An art beyond words, it has extended into areas of general medicine, mainstream education and community practice. This new edition revises the historical and theoretical perspectives and recognises the growing evidence and research base in contemporary music therapy. Leslie Bunt and Brynjulf Stige document the historical evolution of music therapy and place the practice within seven current perspectives: medical, behavioural, psychoanalytical, humanistic, transpersonal, culture-centred and music-centred. No single perspective, individual or group approach is privileged, although the focus on the use of sounds and music within therapeutic relationships remains central. Four chapters relate to areas of contemporary practice across different stages of the lifespan: child health, adolescent health, adult health and older adult health. All include case narratives and detailed examples underpinned by selected theoretical and research perspectives. The final two chapters of the book reflect on the evolution of the profession as a community resource and the emergence of music therapy as an academic discipline in its own right. A concise introduction to the current practice of music therapy around the world, Music Therapy: An art beyond words is an invaluable resource for professionals in music therapy and music education, those working in the psychological therapies, social work and other caring professions, and students at all levels.
