Written by one of the leading thinkers in environmentalism, Earthcare brings together Merchant's existing work on the topic of women and the environment as well as updated and new essays. Earthcare looks at age-old historical associations of women with nature, beginning with Eve and continuing through to environmental activists of today, women's commitment to environmental conservation, and the problematic assumptions of women as caregivers and men as dominating nature.

Storylistening makes the case for the urgent need to take stories seriously in order to improve public reasoning. Dillon and Craig provide a theory and practice for gathering narrative evidence that will complement and strengthen, not distort, other forms of evidence, including that from science. Focusing on the cognitive and the collective, Dillon and Craig show how stories offer alternative points of view, create and cohere collective identities, function as narrative models, and play a crucial role in anticipation. They explore these four functions in areas of

public reasoning where decisions are strongly influenced by contentious knowledge and powerful imaginings: climate change, artificial intelligence, the economy, and nuclear weapons and power. Vivid performative readings of stories from *The Ballad of Tam-Lin* to *The Terminator* demonstrate the insights that storylistening can bring and the ways it might be practised. The book provokes a reimagining of what a public humanities might look like, and shows how the structures and practices of public reasoning can evolve to better incorporate narrative evidence. Storylistening aims to create the conditions in which the important task of listening to stories is possible, expected, and becomes endemic. Taking the reader through complex ideas from different disciplines in ways that do not require any prior knowledge, this book is an essential read for policymakers, political scientists, students of literary studies, and anyone interested in the public humanities and the value, importance, and operation of narratives.

A critique of population control narratives reproduced by international development actors in the 21st century Since the turn of the millennium, American media, scientists, and environmental activists have insisted that the global population crisis is “back”—and that the only way to avoid catastrophic climate change is to ensure women’s universal access to contraception. Did the

population problem ever disappear? What is bringing it back—and why now? In *On Infertile Ground*, Jade S. Sasser explores how a small network of international development actors, including private donors, NGO program managers, scientists, and youth advocates, is bringing population back to the center of public environmental debate. While these narratives never disappeared, Sasser argues, histories of human rights abuses, racism, and a conservative backlash against abortion in the 1980s drove them underground—until now. Using interviews and case studies from a wide range of sites—from Silicon Valley foundation headquarters to youth advocacy trainings, the halls of Congress and an international climate change conference—Sasser demonstrates how population growth has been reframed as an urgent source of climate crisis and a unique opportunity to support women’s sexual and reproductive health and rights. - Although well-intentioned—promoting positive action, women’s empowerment, and moral accountability to a global community—these groups also perpetuate the same myths about the sexuality and lack of virtue and control of women and the people of global south that have been debunked for decades. Unless the development community recognizes the pervasive repackaging of failed narratives, Sasser argues, true change and development progress will not be possible. *On Infertile Ground* presents a unique critique of international

development that blends the study of feminism, environmentalism, and activism in a groundbreaking way. It will make any development professional take a second look at the ideals driving their work.

The Routledge Handbook of Political Ecology presents a comprehensive and authoritative examination of the rapidly growing field of political ecology. Located at the intersection of geography, anthropology, sociology, and environmental history, political ecology is one of the most vibrant and conceptually diverse fields of inquiry into nature-society relations within the social sciences. The Handbook serves as an essential guide to this rapidly evolving intellectual landscape. With contributions from over 50 leading authors, the Handbook presents a systematic overview of political ecology's origins, practices and core concerns, and aims to advance both ongoing and emerging debates. While there are numerous edited volumes, textbooks, and monographs under the heading 'political ecology,' these have tended to be relatively narrow in scope, either as collections of empirically based (mostly case study) research on a given theme, or broad overviews of the field aimed at undergraduate audiences. The Routledge Handbook of Political Ecology is the first systematic, comprehensive overview of the field. With authors from North and South America, Europe, Australia and elsewhere, the Handbook of Political Ecology provides a state of the art

examination of political ecology; addresses ongoing and emerging debates in this rapidly evolving field; and charts new agendas for research, policy, and activism. The Routledge Handbook of Political Ecology introduces political ecology as an interdisciplinary academic field. By presenting a 'state of the art' examination of the field, it will serve as an invaluable resource for students and scholars. It not only critically reviews the key debates in the field, but develops them. The Handbook will serve as an excellent resource for graduate and advanced undergraduate teaching, and is a key reference text for geographers, anthropologists, sociologists, environmental historians, and others working in and around political ecology.

This book envisages a different form of our economies where care work and care-full relationships are central to social and cultural life. It sets out a feminist vision of a caring economy and asks what needs to change economically and ecologically in our conceptual approaches and our daily lives as we learn to care for each other and non-human others. Bringing together authors from 11 countries (also representing institutions from 8 countries), this edited collection sets out the challenges for gender aware economies based on an ethics of care for people and the environment in an original and engaging way. The book aims to break down the assumed inseparability of economic growth and social

prosperity, and natural resource exploitation, while not romanticising social-material relations to nature. The authors explore diverse understandings of care through a range of analytical approaches, contexts and case studies and pays particular attention to the complicated nexus between re/productivity, nature, womanhood and care. It includes strong contributions on community economies, everyday practices of care, the politics of place and care of non-human others, as well as an engagement on concepts such as wealth, sustainability, food sovereignty, body politics, naturecultures and technoscience. *Feminist Political Ecology and the Economics of Care* is aimed at all those interested in what feminist theory and practice brings to today's major political economic and environmental debates around sustainability, alternatives to economic development and gender power relations.

This essential new book gives the reader an introduction to the fundamental concepts of gestalt therapy in a stimulating and accessible style. It supports the study and practice of gestalt therapy for clinicians of all backgrounds, reflecting a practice-based pedagogy that emphasises experiential learning. The content in this book builds on the curriculum taught at the Norwegian Gestalt Institute University College (NGI). The material is divided into four main sections. In the first section, the theoretical basis for gestalt therapy is presented with references

to gestalt psychology, field theory, phenomenology, and existential philosophy. In the later parts, central theoretical terms and practical models are discussed, such as the paradoxical theory of change, creative adjustment, self, contact, contact forms, awareness, polarities, and process models. Clinical examples illustrate the therapy form's emphasis on the relational meeting between therapist and client. Detailed description of gestalt therapy theory from the time of the gestalt psychologists to today, with abundant examples from clinical practice, distinguishes this book from other texts. It will be of great value to therapists, coaches, and students of gestalt therapy.

Destined to transform its field, this volume features some of the most exciting feminist scholars and activists working within feminist political ecology, including Giovanna Di Chiro, Dianne Rocheleau, Catherine Walsh and Christa Wichterich. Offering a collective critique of the 'green economy', it features the latest analyses of the post-Rio+20 debates alongside a nuanced reading of the impact of the current ecological and economic crises on women as well as their communities and ecologies. This new, politically timely and engaging text puts feminist political ecology back on the map.

coercively discipline the poor and marginalized sectors of the population throughout the history of capitalism. Roberts argues that capitalism has always been underpinned by the use of state power to discursively construct and materially manage those sectors of the population who are most resistant to and marginalized by the instantiation and deepening of capitalism. The book reveals that the law, along with social welfare regimes, have operated in ways that are highly gendered, as gender – along with race – has been a key axis along which difference has been constructed and regulated. It offers an important theoretical and empirical contribution that disrupts the tendency for mainstream and critical work within IPE to view capitalism primarily as an economic relation. Roberts also provides a feminist critique of the failure of mainstream and critical scholars to analyse the gendered nature of capitalist social relations of production and social reproduction. Exploring a range of issues related to the nature of the capitalist state, the creation and protection of private property, the governance of poverty, the structural compulsions underpinning waged work and the place of women in paid and unpaid labour, this book is of great use to students and scholars of IPE, gender studies, social work, law, sociology, criminology, global development studies, political science and history.

the key advantage of efficient use of feed that allows farmed fish to be competitively priced compared with terrestrial proteins. *Sustainable Aquafeeds: Technological Innovation and Novel Ingredients* explores the present and future evolution of feeds, explains the current challenges for aquaculture, and considers how advances in technologies and ingredients can produce aquafoods for the increasing world population. International contributors to this book provide state-of-the-art information on the profile of the aquafeed industry, including factors affecting supplies and prices of key ingredients for aquafeed production. An entire set of chapters covers the scientific advances and feed industry initiatives in accordance with modern consumer trends, updating readers on the most promising strategies. These include the use of novel ingredients for nutrient supplementation and the enhancement of their use by genetic selection. The authors hope to inspire a collaboration of NGOs, researchers, and private partnerships to replace wild-caught ingredients by accelerating and supporting the scaling of innovative, alternative, aquaculture feed ingredients, including bacterial meals, plant-based proteins, algae, and yeast.

The world is caught in the mesh of a series of environmental crises. So far attempts at resolving the deep basis of these have been superficial and disorganized. *Global Political Ecology* links the political economy of global capitalism with the political ecology of a series of environmental disasters and failed attempts at environmental policies. This critical volume draws together contributions from twenty-five leading intellectuals in the field. It begins with an introductory chapter that introduces the readers to political ecology and summarizes the books main findings. The following seven sections cover topics on the political ecology of war and the disaster state; fuelling capitalism: energy scarcity and abundance; global governance of health,

bodies, and genomics; the contradictions of global food; capital's marginal product: effluents, waste, and garbage; water as a commodity, a human right, and power; the functions and dysfunctions of the global green economy; political ecology of the global climate, and carbon emissions. This book contains accounts of the main currents of thought in each area that bring the topics completely up-to-date. The individual chapters contain a theoretical introduction linking in with the main themes of political ecology, as well as empirical information and case material. Global Political Ecology serves as a valuable reference for students interested in political ecology, environmental justice, and geography.

Feminist Political Ecology explores the gendered relations of ecologies, economies and politics in communities as diverse as the rubber tappers in the rainforests of Brazil to activist groups fighting racism in New York City. Women are often at the centre of these struggles, struggles which concern local knowledge, everyday practice, rights to resources, sustainable development, environmental quality, and social justice. The book bridges the gap between the academic and rural orientation of political ecology and the largely activist and urban focus of environmental justice movements.

The Oxford Handbook of Transnational Feminist Movements explores the historical, political, economic and social contexts in which transnational feminist movements have emerged and spread, and the contributions they have made to global knowledge, power and social change over the past half century. The publication of the handbook in 2015 marks the fortieth anniversary of the United Nations International Women's Year, the thirtieth anniversary of the Third World Conference on Women held in Nairobi, the twentieth anniversary of the Beijing Declaration and Platform for Action, and the fifteenth anniversaries of the Millennium

Development Goals and of UN Security Council Resolution 1325 on 'women, peace and security'. The editors and contributors critically interrogate transnational feminist movements from a broad spectrum of locations in the global South and North: feminist organizations and networks at all levels (local, national, regional, global and 'glocal'); wider civil society organizations and networks; governmental and multilateral agencies; and academic and research institutions, among others. The handbook reflects candidly on what we have learned about transnational feminist movements. What are the different spaces from which transnational feminisms have operated and in what ways? How have they contributed to our understanding of the myriad formal and informal ways in which gendered power relations define and inform everyday life? To what extent have they destabilized or transformed the global hegemonic systems that constitute patriarchy? From a position of fifty years of knowledge production, activism, working with institutions, and critical reflection, the handbook recognizes that transnational feminist movements form a key epistemic community that can inspire and provide leadership in shaping political spaces and institutions at all levels, and transforming international political economy, development and peace processes. The handbook is organized into ten sections, each beginning with an introduction by the editors. The sections explore the main themes that have emerged from transnational feminist movements: knowledge, theory and praxis; organizing for change; body politics, health and well-being; human rights and human security; economic and social justice; citizenship and statebuilding; militarism and religious fundamentalisms; peace movements, UNSCR 1325 and postconflict rebuilding; feminist political ecology; and digital-age transformations and future trajectories.

Global Gender Issues in the New Millennium argues that the power of gender works to help keep gender, race, class, sexual, and national divisions in place despite increasing attention to gender issues in the study and practice of world politics. Accessible and student-friendly for both undergraduate and graduate courses, authors Anne Sisson Runyan and V. Spike Peterson analyze gendered divisions of power and resources that contribute to the worldwide crises of representation, violence, and sustainability. They emphasize how hard-won attention to gender equality in world affairs can be co-opted when gender is used to justify or mystify unjust forms of global governance, international security, and global political economy. In the new and updated fourth edition, Runyan and Peterson examine the challenges of forging transnational solidarities to de-gender world politics, scholarship, and practice through renewed politics for greater representation and redistribution. Yet they see promise in coalitional struggles to re-radicalize feminist world political demands to change the downward conditions of women, men, children, and the planet. Updated to include framing questions at the opening of each chapter, discussion questions and exercises at the end of each chapter, and updated data on gender statistics and policymaking. Chapters One and Two have also been revised to provide more support to readers with less of a background in gender politics. Case studies and web resources are now also provided.

Political Ecology addresses environmental issues which Innis was concerned with, from a contemporary, political economy perspective. Women and their roles within families must be understood within the context of ethnic traditions, religion, and culture. *Women, Families, and Feminist Politics: A Global Exploration* combines all of these aspects to evaluate the similarities and differences of women around the world. Readers will learn about diverse theories relating to women and their familial roles, the different categories of feminism, and how cultures and ethnic traditions shape and sometimes restrict a woman's identity. Using feminist and sociocultural theories to critically examine the role of adult women within their families, *Women, Families, and Feminist Politics* offers ideas and suggestions on what has to be done in order for all of women's experiences and concerns to be valued and looked upon as important. In addition to providing you with an understanding of how customs and cultures contribute to societal standards set for women, *Women, Families, and Feminist Politics* discusses several factors that contribute to the formation of women's roles and identity, including: the economic situation of the family and the country in which the woman lives (a developed or developing country) cultural diversity in monogamous heterosexual marriage relations and specific marriage traditions, such as dowries family structures, such as nonnuclear, extended, polygamous, mixed religion relationships, mixed race relationships, or same-sex relationships reproduction and sexual standards in relation to religion, government policies, and world population gender equity in the workplace and programs for women in global development the health care needs of women and how they vary depending on culture, political philosophies, and resources women and violence in societal and family contexts, from war rapes, female circumcision, and footbinding to battery

Focusing on the importance of views concerning the meaning of women's social status, power, and success, Women, Families, and Feminist Politics contains case studies and statistical data that identify critical issues pertaining to you personally and to all women throughout the world. By understanding how women's families help shape their identities, you will be able to learn about the vast experiences of women and the inequalities we have yet to overcome.

"The book describes our common present with unsentimental urgency. Benjaminsen and Svarstad demonstrate the complexity of human engagement with the scarce resources of our planet, and the analytical pathways offered by political ecology. The book's many vivid examples underscore how power is always part of the equation: people + their environment." Christian Lund, University of Copenhagen, Denmark This textbook introduces political ecology as an interdisciplinary approach to critically examine land and environmental issues. Drawing on discourse and narrative analysis, Marxist political economy and insights from natural science, the book points at similarities, differences and inter-connections between environmental governance in the global North and South. A wide range of carefully curated case studies are presented, with a particular focus on Africa and Norway. Key themes of power, justice and environmental sustainability run through all chapters. The authors challenge established views and leading discourses and present research findings that may surprise readers. Chapters cover topics including wildlife conservation, climate change and conflicts, land grabbing, the effects of population growth on the environment, jihadism in the African

Sahel, bioprospecting, feminist political ecology, and struggles around carbon mitigation within a fossil fuel-based economy. This introductory text provides tools and examples for both undergraduate and postgraduate students to better understand on-going struggles about some of the world's most urgent challenges. Tor A. Benjaminsen is a human geographer and Professor of Development Studies at the Norwegian University of Life Sciences, Norway. His research is focused on environmental change and its governance within a broad and interdisciplinary political ecology perspective. He is a lead author of the 6th IPCC report and an Associate Editor of Political Geography. Hanne Svarstad is a sociologist and Professor of Development Studies at Oslo Metropolitan University, Norway. Her research is about climate change mitigation, land use conflict, bioprospecting, power, environmental justice, education and alternative sustainabilities.

Nature is all around us, in the beautiful but also in the unappealing and functional, and from the awe-inspiring to the mundane. It is vital that we learn to see the agency of the natural world in all things that make our lives possible, comfortable and profitable. The Ecology of Everyday Things pulls back the veil of our familiarity on a range of 'everyday things' that surround us, and which we perhaps take too much for granted. This key into the magic world of the everyday can enable us to take better account of our common natural inheritance. Professor James Longhurst, Assistant Vice Chancellor, University of the West of England (UWE Bristol) For many people, ecosystems may be a remote concept, yet we eat, drink, breathe and interface with them in every moment of our lives. In this engaging textbook, ecosystems scientist Dr.

Mark Everard considers a diversity of 'everyday things', including fascinating facts about their ecological origins: from the tea we drink, to the things we wear, read and enjoy, to the ecology of communities and space flight, and the important roles played by germs and 'unappealing creatures' such as slugs and wasps. In today's society, we are so umbilically connected to ecosystems that we fail to notice them, and this oversight blinds us to the unsustainability of everyday life and the industries and policy environment that supports it. *The Ecology of Everyday Things* takes the reader on an enlightening, fascinating voyage of discovery, all the while soundly rooted in robust science. It will stimulate awareness about how connected we all are to the natural world and its processes, and how important it is to learn to better treat our environment. Ideal for use in undergraduate- and school-level teaching, it will also interest, educate, engage and enthuse a wide range of less technical audiences.

Using a feminist political economy approach, contributors document the impact of current socio-economic policies on states, markets, households, and communities. Relying on impressive empirical research, they argue that women bear the costs of and responsibility for care-giving and show that the theoretical framework provided by feminist analyses of social reproduction not only corrects the gender-blindness of most economic theories but suggests an alternative that places care-giving at its centre. In this illuminating study, they challenge feminist scholars to re-engage with materialism and political economy to engage with feminism.

management, Indigenous knowledge and political ecology scholarship, the text introduces legal geography's modes of analysis and critique. The book explores topics such as Indigenous environmental rights, the impacts of extractive industries, mediation of climate change, food, animal and plant patents, fossil fuels, mining and coastal environments based on empirical, jurisdictional and methodological insights from Australia, New Zealand and the Asia-Pacific to demonstrate how space and place are invoked in legal processes and contestations, and the methods that may be employed to explore these processes and contestations. This book examines the role of legal geographies in the 21st century beyond the simple "law in action", and it will thus appeal to students of socio-legal studies, human geography, environmental studies, environmental policy, as well as politics and international relations.

Two of the most important political movements of the late twentieth century are those of environmentalism and feminism. In this book, Val Plumwood argues that feminist theory has an important opportunity to make a major contribution to the debates in political ecology and environmental philosophy. *Feminism and the Mastery of Nature* explains the relation between ecofeminism, or ecological feminism, and other feminist theories including radical green theories such as deep ecology. Val Plumwood provides a philosophically informed account of the relation of women and nature, and shows how relating male domination to the domination of nature is important and yet remains a dilemma for women.

Making Political Ecology presents a comprehensive view of an important new field in human geography and interdisciplinary studies of nature-society relations. Tracing the development of political ecology from its origins in geography and ecological anthropology in the 1970s, to its current status as an established field, the book investigates how late twentieth-century developments in social and ecological theories are brought together to create a powerful framework for comprehending environmental problems. Making Political Ecology argues for an inclusionary conceptualization of the field, which absorbs empirical studies from urban, rural, First World and Third World contexts and the theoretical insights of feminism, poststructuralism, neo-Marxism and non-equilibrium ecology. Throughout the book, excerpts from the writings of key figures in political ecology provide an empirical grounding for abstract theoretical concepts. Making Political Ecology will convince readers of political ecology's particular suitability for grappling with the most difficult questions concerning social justice, environmental change and human relationships with nature.

This is a text grounded in theory and practice, and which draws on case study examples, as well as historical perspectives and coverage of contemporary issues regarding employment in the music industries. The book will be of particular interest to aspiring music professionals and all those working in the areas of Music Education, Performance Studies and Artistic Research.

Over the last several decades, scholars and practitioners have progressively acknowledged that we cannot consider cities as the place where nature stops anymore, resulting in urban environments being increasingly appreciated and theorized as hybrids between nature and culture, entities made of socio-ecological processes in constant transformation. Spanning the fields of political ecology, environmental studies, and sociology, this new direction in urban theory emerged in concert with global concern for sustainability and environmental justice. This volume explores the notion that connecting with nature holds the key to a more progressive and liberatory politics.

introduction to an exciting new research field that aims to develop an integrated understanding of the political economy of environmental change in the Third World. The authors review the historical development of the field, explain what is distinctive about Third World political ecology, and suggest areas for future development. Clarifying the essentially politicised condition of environmental change today, the authors explore the role of various actors - states, multilateral institutions, businesses, environmental non-governmental organisations, poverty-stricken farmers, shifting cultivators and other 'grassroots' actors - in the development of the Third World's politicised environment. Third World Political Ecology is the first major attempt to explain the development and characteristics of environmental problems that plague parts of Asia, Africa and Latin America. Drawing on examples from throughout the Third World, the book will be of interest to all those who wish to understand the political and economic bases of the Third World's current predicament.

This volume brings together the work of outstanding feminist scholars who reflect on the achievements of feminist political economy and the challenges it faces in the 21st century. The volume develops further some key areas of research in feminist political economy – understanding economies as gendered structures and economic crises as crises in social reproduction, as well as in finance and production; assessing economic policies through the lens of women's rights; analysing global transformations in women's work; making visible the unpaid economy in which care is provided for family and communities, and critiquing the ways in which policy makers are addressing (or failing to address) this unpaid economy.

involved in leading the way. Gender Equality and Sustainable Development calls for policies, investments and initiatives in sustainable development that recognize women's knowledge, agency and decision-making as fundamental. Four key sets of issues - work and industrial production; population and reproduction; food and agriculture, and water, sanitation and energy provide focal lenses through which these challenges are considered. Perspectives from new feminist political ecology and economy are integrated, alongside issues of rights, relations and power. The book untangles the complex interactions between different dimensions of gender relations and of sustainability, and explores how policy and activism can build synergies between them. Finally, this book demonstrates how plural pathways are possible; underpinned by different narratives about gender and sustainability, and how the choices between these are ultimately political. This timely book will be of great interest to students, scholars, practitioners and policy makers working on gender, sustainable development, development studies and ecological economics.

For the past 100 years, Hopis have had to deal with technological, economic and political changes originating from outside their society. The author documents the ways in which Hopis have used their culture and their socio-political structures to deal with change, focusing on major events in Hopi history. A study of "fourth worlders" coping with a dominant nation state, the book documents Hopi social organization, economy, religion and politics, as well as key events in the history of Hopi-US relations. Despite 100 years of contact with the dominant American culture, Hopi culture today maintains continuity with aboriginal roots while reflecting the impact of the 20th century.

Global Feminist Politics examines the changing global context for feminist political action, its meaning and forms. It acknowledges the existence of dissent and debate among feminists, asserting that such debate leads to innovation in theory and practice. This book reaches the conclusion that the future of the women's movement depends upon a dialogue which is unafraid to cut across perceived differences. Focusing on key issues raised by a feministic commitment to global political change, this book covers subjects including: * the relevance of contemporary feminist politics for younger women * gendered accounts of genocide and catastrophe * exile, migration and diaspora * gender and the internet * women and the

reconstruction; Citizenship; Art, aesthetics and emotionality; and New social media and global resistance. This text enables students to develop a sophisticated understanding of the work that gender does in policies and practices of global politics.

This edited volume explores how a feminist political ecology framework can bring fresh insights to the study of rural and urban livelihoods dependent on vulnerable rivers, lakes, watersheds, wetlands and coastal environments. Bringing together political ecologists and feminist scholars from multiple disciplines, the book develops solution-oriented advances to theory, policy and planning to tackle the complexity of these global environmental changes. Using applied research on the contemporary management of groundwater, springs, rivers, lakes, watersheds and coastal wetlands in Central and South Asia, Northern, Central and Southern Africa, and South and North America, the authors draw on a variety of methodological perspectives and new theoretical approaches to demonstrate the importance of considering multiple layers of social difference as produced by and central to the effective governance and local management of water resources. This unique collection employs a unifying feminist political ecology framework that emphasizes the ways that gender interacts with other social and geographical locations of water resource users. In doing so, the book further questions the normative gender discourses that underlie policies and practices surrounding rural and urban water management and climate change, water pollution, large-scale development and dams, water for crop and livestock production and processing, resource knowledge and expertise, and critical livelihood studies. This book will be of interest to students and scholars of environmental studies, development studies, feminist and environmental geography, anthropology, sociology, environmental philosophy, public policy, planning, media studies,

Latin American and other area studies, as well as women's and gender studies.

The Environment in Anthropology presents ecology and current environmental studies from an anthropological point of view. From the classics to the most current scholarship, this text connects the theory and practice in environment and anthropology, providing readers with a strong intellectual foundation as well as offering practical tools for solving environmental problems. Haenn, Wilk, and Harnish pose the most urgent questions of environmental protection: How are environmental problems mediated by cultural values? What are the environmental effects of urbanization? When do environmentalists' goals and actions conflict with those of indigenous peoples? How can we assess the impact of "environmentally correct" businesses? They also cover the fundamental topics of population growth, large scale development, biodiversity conservation, sustainable environmental management, indigenous groups, consumption, and globalization. This revised edition addresses new topics such as water, toxic waste, neoliberalism, environmental history, environmental activism, and REDD (Reducing Emissions from Deforestation and Forest Degradation), and it situates anthropology in the multi-disciplinary field of environmental research. It also offers readers a guide for developing their own plan for environmental action. This volume offers an introduction to the breadth of ecological and environmental anthropology as well as to its historical trends and current developments. Balancing landmark essays with cutting-edge scholarship, bridging theory and practice, and offering suggestions for further reading and new directions for research, The Environment in Anthropology continues to provide the ideal introduction to a burgeoning field.

leading figure in the field Companion to Feminist Studies provides a broad overview of the rich history and the multitude of approaches, theories, concepts, and debates central to this dynamic interdisciplinary field. Comprehensive yet accessible, this edited volume offers expert insights from contributors of diverse academic, national, and activist backgrounds—discussing contemporary research and themes while offering international, postcolonial, and intersectional perspectives on social, political, cultural, and economic institutions, social media, social justice movements, everyday discourse, and more. Organized around three different dimensions of Feminist Studies, the Companion begins by exploring ten theoretical frameworks, including feminist epistemologies examining Marxist and Socialist Feminism, the activism of radical feminists, the contributions of Black feminist thought, and interrelated approaches to the fluidity of gender and sexuality. The second section focuses on methodologies and analytical frameworks developed by feminist scholars, including empiricists, economists, ethnographers, cultural analysts, and historiographers. The volume concludes with detailed discussion of the many ways in which pedagogy, political ecology, social justice, globalization, and other areas within Feminist Studies are shaped by feminism in practice. A major contribution to scholarship on both the theoretical foundations and contemporary debates in the field, this volume:

- Provides an international and interdisciplinary range of the essays of high relevance to scholars, students, and practitioners alike
- Examines various historical and modern approaches to the analysis of gender and sexual differences
- Addresses timely issues such as the difference between radical and cultural feminism, the lack of women working as scientists in academia and other research positions, and how activism continues to reformulate feminist approaches
- Draws insight from the positionality of postcolonial, comparative and transnational
