*Research into Design for a Connected World* Amaresh Chakrabarti,2019-01-08 This book showcases cutting-edge research papers from the 7th International Conference on Research into Design (ICoRD 2019) – the largest in India in this area – written by eminent researchers from across the world on design processes, technologies, methods and tools, and their impact on innovation, for supporting design for a connected world. The theme of ICoRD'19 has been “Design for a Connected World”. While Design traditionally focused on developing products that worked on their own, an emerging trend is to have products with a smart layer that makes them context aware and responsive, individually and collectively, through collaboration with other physical and digital objects with which these are connected. The papers in this volume explore these themes, and their key focus is connectivity: how do products and their development change in a connected world? The volume will be of interest to researchers, professionals and entrepreneurs working in the areas on industrial design, manufacturing, consumer goods, and industrial management who are interested in the use of emerging technologies such as

IOT, IIOT, Digital Twins, I4.0 etc. as well as new and emerging methods and tools to design new products, systems and services.

**Street Smart** Samuel I Schwartz,2015-08-18 On a Saturday morning in December 1973, a section of New York's West Side Highway collapsed under the weight of a truck full of asphalt. The road was closed, seemingly for good, and the 80,000 cars that traveled it each day had to find a new way to their destinations. It ought to have produced traffic chaos, but it didn't. The cars simply vanished. It was a moment of revelation: the highway had induced the demand for car travel. It was a classic case of build it and they will come, but for the first time the opposite had been shown to be true: knock it down and they will go away. Samuel I. Schwartz was inspired by the lesson. He started to reimagine cities, most of all his beloved New York, freed from their obligation to cars. Eventually, he found, he was not alone. Since the turn of the twenty-first century, a surreptitious revolution has taken place: every year Americans are driving fewer miles. And the generation named for this new century -- the Millennials -- are driving least of all. Not because they can't afford to; they don't want to. They have better ideas for how to use their streets. An urban transformation is underway, and smart streets are at the heart of it. They will boost property prices and personal fitness, roll back years of congestion and smog, and offer a transformative experience of American urban life. From San Francisco to Salt Lake, Charleston to Houston, the American city is becoming a better and better place to be. Schwartz's Street Smart is a dazzling and affectionate history of the struggle for control of American cities, and an inspiring off-road map to a more vibrant, active, and vigorous urban future.
