Why did so many intelligent people—from venture capitalists to Wall Street elite—fall for the hype? And how did WeWork go so wrong? In little more than a decade, Neumann transformed himself from a struggling baby clothes salesman into the charismatic, hard-partying CEO of a company worth \$47 billion on paper. With his long hair and feel-good mantras, the six-foot-five Israeli transplant looked the part of a messianic truth teller. Investors swooned, and billions poured in. Neumann dined with the CEOs of JPMorgan and Goldman Sachs, entertaining a parade of power brokers desperate to get a slice of what he was selling: the country's most valuable startup, a once-in-a-lifetime opportunity and a generation-defining moment. Soon, however, WeWork was burning through cash faster than Neumann could bring it in. From his private jet, sometimes clouded with marijuana smoke, he scoured the globe for more capital. Then, as WeWork readied a Hail Mary IPO, it all fell apart. .

This book is both revolutionary and traditional, using primary materials rather than author narrative. By adopting this traditional approach for law and accounting, Cunningham's new book puts the subject on par with other law school courses. This traditional "cases and materials" approach underscores how accounting standards bear earmarks of functional law. To facilitate analogical and critical engagement on par with other law school teaching books, pedagogical design follows the classic casebook method of arranging cases and materials in pairs of opposites and complements. This arrangement enables conceptualizing accounting as functional law as theoretical and analytical matters as well. This original content also illuminates transaction economics, factors associated with accounting irregularities and the lawyer's role in financial reporting.

The seventh edition of International Financial Reporting and Analysis has been thoroughly updated in line with changes to the IFRS. The first parts have also been restructured to better reflect the current theoretical, market, regulatory and societal framework in which international financial reporting standards (IFRSs) are being developed and used. Several chapters have been rewritten to better promote student understanding and there are new chapters on corporate governance, business ethics, corporate social responsibility, sustainability reporting and responsible investment and the ethics of the accounting profession. In addition, all of the real world illustrations have been reviewed and many of them replaced with up to date examples to give students an insight into how the principles in the text work in practice.

This edition of 'Financial Accounting and Reporting' features chapters on foreign currency transactions and ethics for accountants. It addresses the theory and conceptual underpinnings of the topic in great depth.

The questions investors need to ask . . . The answers corporate America must give about the true facts of corporate performance and value. During the 2001 baseball season, when games were played at Enron Field in Houston, a typical reaction was: "What the hell is Enron and what do they do?" Now we know more about the executives and inner workings of today's best-known rogue company than we ever imagined. But it turns out that Enron is just the most egregious case of a disturbing trend and the seemingly unstoppable tendency of some capitalists to destroy capitalism. Something like 50 percent of American households directly support the markets by investing in stocks and mutual funds. But some of the people entrusted with the responsibility for maintaining and managing the corporation—senior executives, boards of directors, auditing firms—have become engaged in what can only be called economic terrorism. Enron, Sunbeam, Global Crossing, and Waste Management are but the tip of the iceberg. Luckily, there are ways for investors to spot corporate smoke and mirrors and challenge the players. Larry Elliott and Richard Schroth show investors the questions that need to be asked to get a handle on the performance reality of companies. The corporate world, in turn, needs a return to reality and authenticity in business operations, finance, accounting, and deal making. This need for performance reality is not an issue confined to a few companies who engage in unethical and illegal behavior. The technological pace of change, along with increasingly complicated business transactions, makes global markets more and more complex. The assumption, however, has always been that we have the management competence and rigor to ensure shareholder value. Enron is definitive proof that the way companies are run—the gap between what they say is reality and what is really the case—is frightening. And this gap has severe implications for millions of people who are employees of and investors in these companies. Using Enron as the touchstone, Larry Elliott and Richard Schroth show investors how to think about and measure the candor of corporations, the Wall Street players, and their supporters.

Providing students with the skills to prepare and analyze company-only and consolidated financial statements, this book also looks at the theory behind asset valuation and income determination, and encourages students to develop an awareness of the limitations of conventional financial statements. teaching and learning aids, such as discussion questions, reference to source material, further reading suggestions and worked examples. students' interpretative skills and take their understanding to the next level.

Accounting for Income Taxes is the most comprehensive review of AFIT research. It is designed both to introduce new scholars to this field and to encourage active researchers to expand frontiers related to accounting for income taxes. Accounting for Income Taxes includes both a primer about the rules governing AFIT (Sections 3-4) and a review of the scholarly studies in the field (Sections 5-8). The primer uses accessible examples and clear language to express essential AFIT rules and institutional features. Section 3 reviews the basic rules and institutional details governing AFIT. Section 4 discusses ways that researchers, policymakers, and other interested parties can use the tax information in financial statements to better approximate information in the tax return. The second half of the monograph reviews the extant scholarly studies by splitting the research literature into four topics: earnings management, the association between book-tax differences and earnings characteristics, the equity market pricing of information in the tax accounts, and book-tax conformity. Section 5 focuses on the use of the tax accounts to manage earnings through the valuation allowance, the income tax contingency, and permanently reinvested foreign earnings. Section 6 discusses the association between book-tax differences and earnings characteristics, namely earnings growth and earnings persistence. Section 7 explores how tax information is reflected in share prices. Section 8 reviews the increased alignment of accounting for book purposes and tax purposes. The remainder of the paper focuses on topics of general interest in the economics and econometric literatures. Section 9 highlights some issues of general importance including a theoretical framework to interpret and guide empirical AFIT studies, the disaggregated components of book-tax differences and research opportunities as the U.S. moves toward International Financial Reporting Standards (IFRS). Section 10 discusses econometric weaknesses that are common in AFIT research and proposes ways to mitigate their deleterious effects.

This new edition of Federal Tax Accounting, part of the Graduate Tax Series, has been updated with new problems, discussions, commentary, analysis, and additional coverage of many topics. Chapters 1 and 7 have been substantially revised and reorganized. Chapters 5, 6, and 7 have expanded text with more examples and few but more focused problems. Other changes include: • Revised and expanded discussion of "taxable year" with problems, now in the first chapter; • Expanded discussion of tax accounting vs. financial accounting; • Discussion of Section 409A regulations, with a new problem; • Expanded discussion of inventories, with additional problems; • Additional commentary on accrual of income of doubtful collectability and bad debts, including *Trinity Indus. v. Commissioner* and *Rendall v. Commissioner*; • Updated discussion of Section 448(d) (5) regulations on non-accrual experience method; • New problem dealing with trade discounts, in light of *Westpac Pacific Foods v. Commissioner* and the Advance Trade Discount Method of Rev. Proc. 2007-53; • Updated material on proposed regulations on capitalization of tangible property expenditures; • Expanded treatment of advertising expenditures; • Expanded discussion of investment interest, prepaid interest and personal interest, including Chief Counsel Adv. 2009-11-007, applying qualified residence interest limitation per residence as well as per taxpayer; • Expanded explanation of original issue discount and market premium with examples; • Commentary on gifts of the use of property in light of the *Dickman* decision and the Section 7872 regulations; • Extensive additional text and explanation, with examples, of various aspects of installment reporting, with fewer, more focused problems; • A new section on installment sales coupled with a like-kind exchange with boot, with example and problem; • Expanded discussion of NOL carryovers, including the text of Rev. Rul. 81-88 and commentary; • Comment on accrual method issues similar to those in *United States v. Lewis*; and, • Expanded detailed analysis and discussion of Section 1341, with the text of Rev. Rul. 68-153, *Zadoff v. United States*, and *Barrett v. Commissioner*. The sophisticated realistic problems with a transactional focus are an integral part of Federal Tax Accounting. These problems require careful analysis and application of the code and regulation provisions, administrative pronouncements, case law, and other relevant sources. Perhaps more important for a graduate tax program, the problems not only require careful analysis, but the application requires dealing with situations in which the most careful reading of the materials does not supply the answer.
