A comprehensive introduction to type systems and programming languages. A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute. The study of type systems—and of programming languages from a type-theoretic perspective—has important applications in software engineering, language design, high-performance compilers, and security. This text provides a comprehensive introduction both to type systems in computer science and to the basic theory of programming languages. The approach is pragmatic and operational; each new concept is motivated by programming examples and the more theoretical sections are driven by the needs of implementations. Each chapter is accompanied by numerous exercises and solutions, as well as a running implementation, available via the Web. Dependencies between chapters are explicitly identified, allowing readers to choose a variety of paths through the material. The core topics include the untyped lambda-calculus, simple type systems, type reconstruction, universal and existential polymorphism, subtyping, bounded quantification, recursive types, kinds, and type operators. Extended case studies develop a variety of approaches to modeling the features of object-oriented languages.

"I'm not hanging noodles on your ears." In Moscow, this curious, engagingly colorful assertion is common parlance, but unless you're Russian your reaction is probably "Say what?" The same idea in English is equally odd: "I'm not pulling your leg." Both mean: Believe me. As

author Jag Bhalla demonstrates, these amusing, often hilarious phrases provide a unique perspective on how different cultures perceive and describe the world. Organized by theme—food, love, romance, and many more—they embody cultural traditions and attitudes, capture linguistic nuance, and shed fascinating light on "the whole ball of wax." For example, when English-speakers are hard at work, we're "nose to the grindstone," but industrious Chinese toil "with liver and brains spilled on the ground" and busy Indians have "no time to die." If you're already fluent in 10 languages, you probably won't need this book, but you'll "get a kick out of it" anyhow; for the rest of us, it's a must. Either way, this surprising, often thought-provoking little tome is gift-friendly in appearance, a perfect impulse buy for word lovers, travelers, and anyone else who enjoys looking at life in a riotous, unusual way. And we're not hanging noodles from your ear.

Off-the-wall characters happening in the closest wall, One Hundred One Accounts are real life events told in exactly a word count of one hundred one. I write short stories just for entertaining and reflecting upon, both for myself as to my worldwide readers. I developed a network long-time ago, participating actively in forums which exchanged facts about our very deep existence. So here I present to you, at first hand, some of my most truly, creative, and realistic scenes of ordinary lives with flesh and blood characters who, for some odd reason ended up having extreme situations or out-of-control turn outs to happen in their day-to-day. As this book is about long stories gotten short, mostly for economic reasons, it contains exactly one hundred one words (on each one). For how many quotidian stories we may find throughout the world? That's why I wrote this book based upon the absurdity of tales that occur into routinary lives. This textbook provides students with the knowledge of basic accounting principles and practices concerned with preparing and presenting corporate accounts in a systematic manner. The unique feature of this book is the simplicity of presentation which enables students to understand the subject and solve practical problems with ease. The main strengths of the book are the plentiful illustrative examples and the end-of-chapter exercises with answers. The wide coverage and user-friendly approach makes the book to comprehensively meet the requirements of students studying Corporate Accounting as a subject at B.Com & BBA examinations of different Indian universities based on Choice Based Credit System (CBCS).

The global population is projected to reach almost 10 billion by 2050, and food and feed production will need to increase by 70%. Wheat, maize and sorghum are three key cereals which provide nutrition for the majority of the world's population. Their production is affected by various abiotic stresses which cause significant yield losses. The effects of climate change also increase the frequency and severity of such abiotic stresses. Molecular breeding technologies offer real hope for improving crop yields. Although significant progress has been made over the last few years, there is still a need to bridge the large gap between yields in the most favorable and most stressful conditions.

Financial Accounting for BBA has been written to meet the requirements of undergraduate students, particularly at the BBA level. The family has just moved to an old farmhouse in a new town, where the only good thing seems to be Miri's ten-sided attic bedroom. But when Miri gets sent to her room after accidentally bashing her big brother on the head with a shovel, she finds herself in the same room . . . only not quite. Without meaning to, she has found a way to travel back in time to 1935 where she discovers Molly, a girl her own age very much in need of a loving family. A highly satisfying classic-in-the-making full of spine-tingling moments, this is a delightful time-travel novel for the whole family.
