Central counterparties (CCPs) can offer significant benefits to a market. However, CCPs are also highly interconnected with financial institutions and markets and therefore too important to fail. The increased volumes cleared through CCPs and their increasing global scope, in particular in the OTC derivatives market, make it even more important that systemic risks related to CCPs are managed. This paper argues that the current set of international policy measures does partly address these risks, but that alternative policy measures are needed to reduce remaining systemic risks. For example, the paper recommends network analysis to be conducted by CCPs and authorities to gauge potential losses and suggests a common international approach to central bank services to help reduce the dependency of CCPs on services provided by commercial banks.

"The last 30 years have been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets, as well as strategies that can be adopted for controlling and better managing these risks. Special emphasis is also put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and globalization of financial services"--

The fifth report in this series focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. In the recent stock market collapse, confidence in the financial industry was shaken by numerous scandals. Beginning with Enron in 2001, scandals brought about the demise of prominent financial figures, damaged the reputation of premiere firms and destroyed the global accounting giant Arthur Andersen. Central to this crisis was the exploitation of conflicts of interest. Research analysts at investment banks were found to be distorting information at the behest of underwriting departments eager to promote new issues. Auditors appeared to sanction misleading accounting in order to gain business for the consulting side of their firms. Policy response in the United States was quick. Large fines were levied and regulators compelled the separation of financial security function, constraining financial conglomerates. But are these new regulations and safeguards adequate protection? What costs do they impose on the industry? This fifth title in the ICMP/CEPR series of Geneva Reports on the World Economy examines the problem of conflicts of interest in the financial system. Conflicts of interest lead to a decrease in information that makes it harder for the system to provide savers with the accurate, essential information that induces them to provide credit to borrowers. This study focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. Determining the appropriate remedy for a conflict is a challenge because the elimination of conflicts may also eliminate benefits from economies of scope. This study examines five generic remedies: market discipline, regulation for increased transparency, supervisory oversight, separation of financial activities by function, and socialization of the collection and distribution of information. The authors apply this framework to assess critically the Sarbanes-Oxley Act and the Global Settlement between American regulators and investment banks.
