Essentials of Marketing Research: Putting Research into Practice, an exciting new practical guide by Kenneth E. Clow and Karen E. James offers a hands-on, applied approach to developing the fundamental data analysis skills necessary for making better management decisions using marketing research results. Each chapter opens by describing an actual research study related to the chapter content, with rich examples of contemporary research practices skillfully drawn from interviews with marketing research professionals and published practitioner studies. Clow and James explore the latest research techniques, including social media and other online methodologies, and they examine current statistical methods of analyzing data. With emphasis on how to interpret marketing research results and how to use those findings to make effective management decisions, the authors offer a unique learning-by-doing approach to understanding data analysis, interpreting data, and applying results to decision-making.

The world economy in which we are living poses challenges that lead to a realization that 'more of the same' will be difficult to sustain. This provides an illustration that, in order to create new or modified knowledge practices, strengthen customer relationships and thus positively influence customer satisfaction, organizations must be flexible in configuring (combining) knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning (forgetting) becomes a critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning and knowledge management. How can organizations tailor, use, and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management (KM) and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business, management and organization science as well as cognitive science. Emphasis will be put on systematic learning from experience, KM tools and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight (i.e., do not place considerable additional burden on users and KM experts), allow an incremental adoption (i.e., do not require large up-front investment before any return of investment is at least visible), and are flexible regarding frequent changes in experts and topics. Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge-intensive organizations.

Organizational Change and Global Standardization: Solutions to Standards and Norms Overwhelming Organizations takes an organizational change approach to the overflow of standards and norms, looking at how to deal effectively and ethically with four kinds of standards and norms businesses face when they go global: (1) accounting & finance (2) international & world trade, (3) social and (4) safety & quality & environment. It is part of a larger problem faced by not only business, but every sort of organization - how to live with the epidemic of standards and norms, often in conflict, many just unnecessary, and a few that are quite helpful and important. There are good reasons to have International Standards Organization (ISO), International Labor Organization (ILO), World Trade Organization (WTO), North Atlantic Treaty Association (NAFTA), International accounting Standards Boards (IASB), International Financial Reporting Standards (IFRS)), and many more standard-setting organizations issuing, auditing, proposing codes of ethics, and certifying standards and norms. However, there are important, poorly understood organizational change consequences to the contagion of standards and norms. This volume brings together a unique group of authors who are working on a pragmatic way for organizations to deal with an overflow of standards and norms that are often at heads, ambiguous, or simply created to produce more work for a burgeoning standards setting industry. The aim of Organizational Change and Global Standardization is to stimulate a critical analysis within the framework of analytical and pragmatic approach to an overwhelming bureaucratization of the managed and organized global activities.
