

Fisiologia Humana Silverthorn

This book emphasizes the relationships and concepts that link cell and tissue structures with their functions. It begins with a description of the structure and function of cells, then presents the four basic tissues of the body, and concludes with individual chapters on each organ and organ system. Cell biology is emphasized as the most fundamental approach to the understanding of structure and function. An image library CD-ROM also includes the halftones and line art illustrations in the book. The image library would function as an atlas to the text.

Leading population biologists examine ecological and evolutionary issues in the context of space.

The days, the seasons, the years pass by... Our body can predict and prepare itself for the environmental changes. Predictability is very important to optimize its performance. However, how do our cells know when it is day, night, summer or winter? They need a signal, and that's where melatonin comes in. It is a hormone produced by a gland in the middle of our brain called pineal gland. Pineal gland only produces melatonin at night (and in the dark)! So melatonin is the sign our cells were waiting to tell them it is night. It turns out that in the modern world, we are overexposed to light. People work at night when they should be sleeping. Blue light coming from our TV, computer or smartphone can block melatonin production. Light exposure at night prevents our body to predict properly the environmental changes so it loses its rhythmicity. Disturbances of melatonin rhythms are associated with various health problems such as neurodegenerative diseases, heart disease, hypertension, and even cancer. See? Melatonin's actions go far beyond making you sleep ... and that's what I want to tell you in this book.

The development of non-invasive brain function measurement has enabled the knowledge that brain activity is the basis of human behavior and mental activity. Electroencephalography (EEG) is a method that measures the electrical nerve activity (primary signal) in the brain. EEG characteristics include high time resolution and low spatial resolution, but recently it has become possible to estimate the source of EEG signals due to advances in analysis and measurement techniques. Moreover, in the medical field, EEG is usually used as examination equipment, but it has been used as a rehabilitation tool to control human behavior and mental activity in recent years. This book outlines basic research and clinical applications of EEG.

Organized around the central theme of homeostasis, FUNDAMENTALS OF HUMAN PHYSIOLOGY is a carefully condensed version of Lauralee Sherwood's HUMAN PHYSIOLOGY: FROM CELLS TO SYSTEMS. This book came about as a result of a review I had written earlier on features of cellular changes occurring during anuran metamorphosis. Only a limited treatment of this subject was possible in such a circumscribed work and only specific examples of organic change were dealt with. Thus the sins of omission weighed heavily, for so much information could not be included to provide a more comprehensive and authenticated account of the elaborate, complex, and far-reaching changes that an aquatic larva undergoes to become a terrestrial froglet. A good deal of my working life has been spent investigating amphibians, especially their larval developmental morphology during metamorphosis, first at the level of light microscopy and in later years by electron microscopy. Initially I was particularly concerned with morphological homologies of a variety of larval structures, such as the cranial and pharyngeal skeleton and the nerves and musculature, in order to learn more about amphibian phylogeny, for during my pre- and early postgraduate years G. R. Beer and D. M. S. Watson inspired an undying interest in and respect for vertebrate comparative anatomy. However, it now seems to be that amphibian phylogenetic relationships are best dealt with by the paleontologists, so ably demonstrated by D. M. S. Watson and A. S. Romer and the contemporary enthusiasts in this field like A. L. Panchen, R. L. Carroll, E. Jarvik, and K. S. Thompson among a host of others, particularly in the USA.
