## Robert B. Brandom

Education for a Digital World David G. Harper, BC Campus, Sandy Hirtz, Commonwealth of Learning (Canada), 2008 This is a comprehensive collection of proven strategies and tools for effective online teaching, based on the principles of learning as a social process. It offers practical, contemporary guidance to support e-learning decision-making, instructional choices, as well as program and course planning, and development.

Between Saying and Doing Robert B. Brandom, 2010-04-08 Between Saying and Doing aims to reconcile pragmatism (in both its classical American and its Wittgensteinian forms) with analytic philosophy. It investigates the relations between the meaning of linguistic expressions and their use. Giving due weight both to what one has to do in order to count as saying various things and to what one needs to say in order to specify those doings, makes it possible to shed new light on the relations between semantics (the theory of the meanings of utterances and the contents of thoughts) and pragmatics (the theory of the functional relations among meaningful or contentful items). Among the vocabularies whose interrelated use and meaning are considered are: logical, indexical, modal, normative, and intentional vocabulary. As the argument proceeds, new ways of thinking about the classic analytic core programs of empiricism, naturalism, and functionalism are offered, as well as novel insights about the ideas of artificial intelligence, the nature of logic, and intentional relations between subjects and objects.

**Building a Bridge to the 18th Century** Neil Postman, 2011-06-08 At a time when we are reexamining our values, reeling from the pace of change, witnessing the clash between good instincts and pragmatism, dealing with the angst of a new millennium, Neil Postman, one of our most distinguished observers of contemporary society, provides for us a source of guidance and inspiration. In Building a Bridge to the Eighteenth Century he revisits the Enlightenment, that great flowering

of ideas that provided a humane direction for the future -- ideas that formed our nation and that we would do well to embrace anew. He turns our attention to Goethe, Voltaire, Rousseau, Diderot, Kant, Edward Gibbon, Adam Smith, Thomas Paine, Jefferson, and Franklin, and to their then-radical thinking about inductive science, religious and political freedom, popular education, rational commerce, the nation-state, progress, and happiness. Postman calls for a future connected to traditions that provide sane authority and meaningful purpose -- as opposed to an overreliance on technology and an increasing disregard for the lessons of history. And he argues passionately for specific new guidelines in the education of our children, with renewed emphasis on developing the intellect as successfully as we are developing a computer-driven world. Witty, provocative, and brilliantly reasoned, *Building a Bridge to the Eighteenth Century* is Neil Postman's most radical, and most commonsensical, book yet.

**The End of Education** Neil Postman, 2011-06-01 In this comprehensive response to the education crisis, the author of *Teaching as a Subversive Activity* returns to the subject that established his reputation as one of our most insightful social critics. Postman presents useful models with which schools can restore a sense of purpose, tolerance, and a respect for learning.

*Unauthorized Methods* Joe L. Kincheloe, Shirley R. Steinberg, 1998 *Unauthorized Methods* makes accessible some of the best theoretical innovations in critical pedagogy of the last decade. The contributors consider how an integration of popular culture and cultural studies into the lesson plan can enrich and reinvigorate the learning experience. These essays, ranging widely in topic and educational level, are grounded in theory but intended for practical application. By focusing on classroom methods, the contributors provide educators with techniques, strategies, and examples designed to transform the classroom into a truly multicultural and democratic space. *Unauthorized Methods* will be an indispensable resource for teachers, students, and policy makers.

**Teaching Digital Natives** Marc Prensky, 2010-03-29 Students today are growing up in a digital world. These digital natives learn in new and different ways, so educators need new approaches to make learning both real and relevant for today's students. Marc Prensky, who first coined the terms digital natives and digital immigrants, presents an intuitive yet highly innovative and field-tested partnership model that promotes 21st-century student learning through technology. Partnership pedagogy is a framework in which: - Digitally literate students specialize in content finding, analysis, and presentation via multiple media - Teachers specialize in guiding student learning, providing questions and context, designing instruction, and assessing quality - Administrators support, organize, and facilitate the process schoolwide - Technology becomes a tool that students use for learning essential skills and getting things done With numerous strategies, how-to's, partnering tips, and examples, *Teaching Digital Natives* is a visionary yet practical book for preparing students to live and

work in today's globalized and digitalized world.

Media Literacy in the Information Age Robert William Kubey, Examines the theory and practice of media education.

*Mathematics and Plausible Reasoning [Two Volumes in One]* George Polya, 2014-01 2014 Reprint of 1954 American Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. This two volume classic comprises two titles: Patterns of Plausible Inference and Induction and Analogy in Mathematics. This is a guide to the practical art of plausible reasoning, particularly in mathematics, but also in every field of human activity. Using mathematics as the example par excellence, Polya shows how even the most rigorous deductive discipline is heavily dependent on techniques of guessing, inductive reasoning, and reasoning by analogy. In solving a problem, the answer must be guessed at before a proof can be given, and guesses are usually made from a knowledge of facts, experience, and hunches. The truly creative mathematician must be a good guesser first and a good prover afterward; many important theorems have been guessed but not proved until much later. In the same way, solutions to problems can be guessed, and a good guesser is much more likely to find a correct solution. This work might have been called How to Become a Good Guesser.-From the Dust Jacket.
