In publishing the history of combat operations the Department of the Army has three objectives. The first is to provide the Army itself with an accurate and timely account of its varied activities in directing, organizing, and employing its forces for the conduct of war-an account which will be available to the service schools and to individual members of the Armed Services who wish to extend their professional reading. The second objective is to offer the thoughtful citizen material for a better understanding of the basic problems of war and the manner in which these problems were met, thus augmenting his understanding of national security. The third objective is to accord a well-earned recognition to the devoted work and grim sacrifices of those who served. "The successes of the South Pacific Force," wrote Admiral Halsey in 1944, "were not the achievements of separate services or individuals but the result of whole-hearted subordination of self-interest by all in order that one successful 'fighting team' could be created."\* The history of any South Pacific campaign must deal with this "fighting team," with all United States and Allied services. The victory on Guadalcanal can be understood only by an appreciation of the contribution of each service. No one service won the battle. The most decisive engagement of the campaign was the

air and naval Battle of Guadalcanal in mid-November 1942, an engagement in which neither Army nor Marine Corps ground troops took any direct part. This volume attempts to show the contribution of all services to the first victory on the long road to Tokyo.

On 3 September 1939, Amy Browning decided to start writing a diary. It was a momentous day for so many reasons: it was Amy's eighteenth birthday; her sister had just given birth to a baby boy; and on the radio it was announced that Great Britain was now at war with Germany. For a while, life didn't change very much for Amy. Living with her family in Opal Street, Liverpool, Amy and her friend both got jobs at a factory and spent their free time looking round the shops, or watching the ships being loaded at the docks. But as the months went by, things began to change. The bombing started, and Amy's fears grew for her brother, fighting in France, and her boyfriend Ian, in the RAF...

To help assess proposals for further changes in federal truck weight limits, Congress requested this study through Section 158 of the Surface Transportation and Uniform Relocation Assistance Act of 1987. To conduct the study, the National Research Council convened a special Transportation Research Board committee with experts in pavements, bridges, highway safety, freight transportation economics, motor vehicle design, highway administration, motor carrier operations, and enforcement of motor vehicle regulations. The study focused on four issues identified in the study request that involve potential changes to federal weight limits for Interstate highways: (1) Elimination of existing grandfather provisions; (2) Alternative methods for determining gross vehicle weight and axle loadings; (3) Adequacy of the current federal bridge formula; and (4)

Treatment of specialized hauling vehicles--garbage trucks, dump trucks, and other trucks with short wheel bases that have difficulty complying with the current federal bridge formula. For each of these issues, the study committee estimated the nationwide effects of changes in federal limits proposed by the trucking industry, highway agencies, and other groups. Projections of heavy-truck miles by type of truck, region of the country, highway functional class, and operating weight were developed for a base case and alternative truck weight regulatory scenarios. These projections were then used to estimate impacts on truck costs, pavements, bridges, and safety.
