In a world increasingly plagued by pollution, where limited availability of fossil fuels creates international tensions, and where global disaster from proliferating technology lurks on the horizon, the search for alternative synthetic fuels is no longer an idle scientist's dream—it is necessity. Hydrogen—with its vast and ready availability from water, its nearly universal utility, and its inherently benign characteristics—is one of several attractive synthetic fuels being considered for a "post-fossil-fuel" world, and it may well be the miracle fuel of the future. It is of special interest because, technically at least, it is so easily produced and because it produces simple water vapor in the combustion process rather than loading an already burdened environment with more hydrocarbons, carbon dioxide and monoxide, sulfur, particulate matter, and even more exotic pollutants. Journalist Peter Hoffmann describes worldwide scientific work toward a future hydrogen economy, looking at the auspicious prospects of this potential fuel, at its applicability to powering everything from automobiles to airplanes, and at the principles and technologies involved in making hydrogen a viable energy alternative. He examines how—and how soon—nature's simplest element may become available as an energy carrier, as well as the economic conditions that will accompany its introduction and the social impact of "clean" hydrogen energy. The picture he paints of the fuel future is a welcome alternative to the now-common prognostications of impending doom. Many businesses fail today, but not because of poor financing, outdated technology, or lack of qualified employees. They fail because they lack the very basic elements that are characteristic of all successful businesses. They have become reliant on high priced consultants, to advise them on a course of action, to make their companies profitable, without looking internally for the answers that are already there. Businesses look to technology as the answer for many of all of their financial shortcomings. Rather

than increasing revenues through aggressive and creative sales programs, they opt for the short-sighted approach of cutting expenses and dispensing with valuable experienced employees. But, there is another option. As a struggling golfer must step back and reexamine his setup, approach, and follow through, so too, must company owners step back and reexamine the mechanics of their business. They do not need to reinvent the wheel, they need to use the wheel. It is time for businesses to concentrate on The Bottom Line and get Back to Basics.
