The financialization, globalization and industrialization of our food systems make it increasingly difficult to access quality fresh food. In fact, the industrialized global food system is creating products that are less food-like, engendering growing questions about the health and safety of our food supply. In addition, the bio-engineering of food commodities is another factor influencing the growth of industrial farming for an increasingly homogenized, globalized market. This book describes the financialization process in commodity futures markets which transformed commodities into an asset class. Incorporated into the portfolio decisions of investors, commodity prices now behave like all asset prices, becoming more volatile and subject to periodic bubbles. As commodity prices were driven higher in the 2000s, farmland became more valuable, setting off a global land grab by investors, nations, and corporations. More recently, under the financialization food regime, slow growth and low returns encouraged merger activity driven by private equity firms, with food industry corporations as prime targets, leading to increased industry concentration. With government policy focused on supporting corporate interests, there has been a global reaction to the current food system. The food sovereignty movement is taking on the interests behind the global land grab, and the regional food movement in cities across the U.S. is hitting corporations at the bottom line. Food corporations are listening. Is the food movement winning? This book is of interest to those who study political economy, financialization and agriculture and related studies, as well as food systems and commodity future markets.

Accelerate your journey to financial freedom with the tools, strategies, and mindset of money mastery. Regardless of your stage of life and your current financial picture, the quest for financial freedom can indeed be conquered. The journey will demand the right tools and strategies along with the mindset of money mastery. Now you can offer your students a structured, applied approach to behavioral finance with the first academic text of its kind--Ackert/Deaves' BEHAVIORAL FINANCE: PSYCHOLOGY, DECISION MAKING, AND MARKETS. This comprehensive text--ideal for your behavioral finance elective-- links finance theory and practice to human behavior. The book begins by building upon the established, conventional principles of finance that students have already learned in their principles course. The authors then move into psychological principles of behavioral finance, including heuristics and biases, overconfidence, emotion and social forces. Students learn how human behavior influences the decisions of individual investors and professional finance practitioners, managers, and markets. Your students gain a strong understanding of how social forces impact people's choices. The book clearly explains what behavioral finance indicates about observed market outcomes as well as how psychological biases potentially impact the behavior of managers. Students learn the implications of behavioral finance on retirement, pensions, education, debiasing, and client management. This book is unique as it spends a significant amount of time examining how behavioral finance can be used effectively by practitioners today. The book's solid academic approach provides opportunities for students to utilize theory and complete applications in every chapter. A wide variety of end-of-chapter exercises, discussion questions, simulations and experiments reinforce the book's applied approach, while useful instructor supplements ensure you have the resources to clearly present theories of behavioral finance and their applications.
