Democratic states guarantee free movement within their territory to all citizens, as a core right of citizenship. Similarly, the European Union guarantees EU citizens and members of their families the right to live and the right to work anywhere within EU territory. Such rights reflect the project of equality and undifferentiated individual rights for all who have the status of citizen, but they are not uncontested. Despite citizenship's promise of equality, barriers, incentives, and disincentives to free movement make some citizens more equal than others. This book challenges the normal way of thinking about freedom of movement by identifying the tensions between the formal ideals that governments, laws, and constitutions expound and actual practices, which fall short.

Engineers need to be able to test the flammability of the materials they use in buildings and other structures. However, the range of test procedures and regulations in this important area is often confusing. Flammability testing of materials used in construction, transport and mining provides an authoritative guide to current best practice in ensuring safe design. The book begins by defining flammability and the main types of test available. Building on this foundation, a group of chapters then reviews tests for key materials used in buildings and their contents. There are chapters on wood, external cladding and sandwich panels as well as the flammability of walls and ceilings. Tests for furniture fabrics, cables and electrical appliances are also reviewed. A final group of chapters discusses other types of test, particularly in the transport sector, including chapters on flammability testing for railway passenger cars, aircraft, road and rail tunnels. With its distinguished international team of contributors, Flammability testing of materials used in construction, transport and mining is a standard reference for civil and transport engineers in particular.
