According to researchers, the vast majority--a whopping 75-98 percent--of the illnesses that plague us today are a direct result of our thought life. What we think about truly affects us both physically and emotionally. In fact, fear alone triggers more than 1,400 known physical and chemical responses in our bodies, activating more than thirty different hormones! Today our culture is undergoing an epidemic of toxic thoughts that, left unchecked, create ideal conditions for illnesses. Supported by current scientific and medical research, Dr. Caroline Leaf gives readers a prescription for better health and wholeness through correct thinking patterns, declaring that we are not victims of our biology. She shares with readers the "switch" in our brains that enables us to live happier, healthier, more enjoyable lives where we achieve our goals, maintain our weight, and even become more intelligent. Why is it so hard to make lasting changes in our companies, in our communities, and in our own lives? The primary obstacle is a conflict that's built into our brains, say Chip and Dan Heath, authors of the critically acclaimed bestseller *Made to Stick*.

Psychologists have discovered that our minds are ruled by two different systems - the rational mind and the emotional mind—that compete for control. The rational mind wants a great beach body; the emotional mind wants that Oreo cookie. The rational mind wants to change something at work; the emotional mind loves the comfort of the existing routine. This tension can doom a change effort - but if it is overcome, change can come quickly. In *Switch*, the Heaths show how everyday people - employees and managers, parents and nurses - have united both minds and, as a result, achieved dramatic results:

- The lowly medical interns who managed to defeat an entrenched, decades-old medical practice that was endangering patients
- The home-organizing guru who developed a simple technique for overcoming the dread of housekeeping
- The manager who transformed a lackadaisical customer-support team into service zealots by removing a standard tool of customer service

In a compelling, story-driven narrative, the Heaths bring together decades of counterintuitive research in psychology, sociology, and other fields to shed new light on how we can effect transformative change. *Switch* shows that successful changes follow a pattern, a pattern you can use to make the changes that matter to you, whether your interest is in changing the world or changing your waistline.

Nowadays, billions of lines of code are in the COBOL programming language. This book is an analysis, a diagnosis, a strategy, a MDD method and a tool to

transform legacy COBOL into modernized applications that comply with Internet computing, Service-Oriented Architecture (SOA) and the Cloud. “911, what emergency situation do you wish to report, please?” “Yes, uhm—I think I need to go to a hospital to be checked out. I was just getting ready for bed, and all of a sudden I found myself waking up, on the floor.” “Do you think you had a heart attack?” “I’m not sure—I’m not having any chest pain.” “Okay, we will have an ambulance there shortly. Is the door unlocked?” “No, it’s locked. I’ll answer the door.” “You might wish to go ahead and unlock it. That way they can get in if they need to.” “Okay, will do.” The rescue personnel recommend a place called the “MAC Center” (Mercy Hospital Ambulatory Care). It is only a couple of miles away. There they can do tests and recommend an appropriate hospital. As a police scanner listener, I am familiar with the transport procedure used by rescue personnel. What I hear the ambulance personnel say over their radio mike as the ambulance starts moving therefore sounds surreal to me. “We’re en route to the MAC center with a forty-eight-year-old male patient, starting mileage is ...” I can’t believe that this time, I am the patient! Very scary thought.
