Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In The Psychology of Money, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most important topics.

Written by a widely respected author team, this investments text takes an empirical approach to explaining current, real-world practice. Providing the most comprehensive coverage available, the text emphasizes investment alternatives and teaches students how to analyze these choices and manage their portfolios.

Fact: Most people do not beat the market. This book was written to change that statistic and skew the odds of success in your favor. There are many reasons why most people fail to achieve their investment goals but the one common denominator is that most people follow the crowd and are doing the same thing as everyone else. This book introduces and sheds light on a new

school of thought, coined by the author, titled Psychological Analysis (PA) for investing/trading in capital markets. Conventional wisdom tells us that there are two primary schools of thought: fundamental and technical analysis. How many times have you seen a market (or stock) with "poor" fundamentals and/or technicals go up--or "great" fundamentals and/or technicals go down? Happens all the time--clearly something is missing. PA fills that void. After studying every major economic and market cycle going back to the 3rd century, Adam coined the term Psychological Analysis for capital markets. His research found that the one constant throughout every major boom and bust in history has been psychology. The truth is human nature never changes. If you walk into a crowded theater anywhere in the world (or at any point in history or in the future) and yell FIRE! The reaction will be the same--the crowd will panic and flee. The same is true for how people react to markets (stocks, bonds, currencies, commodities, real-estate, tulips, etc). Bubbles and bursts happen all over the world, they always have and always will. History is littered with countless booms/busts from different centuries, cultures, religions, race, languages, markets (tulips, real-estate, stocks, etc), just to name a few. This evidence clearly illustrates that human nature doesn't change and that there are more factors that influence price than just fundamental or technical analysis. Fear and greed are the two primary emotions that drive markets and are the primary driver for major market moves in history--up and down. Adam introduces this third school of thought and shows you what is missing in the investing world.

**YOU ARE A SMART WOMAN, BUT DO YOU STILL:** —Feel you're too busy to invest your money? —Rely on someone else to deal? —Get bored by financial talk? —Think that investing is something only men do? —Worry you're not smart enough? **THINK AGAIN.** Women have made strides in so many areas and yet we still have a blind spot when it comes to managing our money. Why? A myriad of factors cause women to earn less than men over a lifetime, making it all the more imperative that we make the money we do have work for us as much as possible. And here's a reality check: as many as nine out of ten of us will have to manage our finances and those of our family at some point in our lives. And a lot of us think that means keeping our money "safe" in savings accounts, and not investing it. But not doing so has an opportunity cost that will lead to opportunities lost—the ability to pay for a college education, own a home, change careers to pursue a dream, or retire. Alice Finn wants to change how you think about your money, no matter how much or little you have. In *Smart Women Love Money*, Finn paves the way forward by showing you that the power of investing is the last frontier of feminism. Drawing on more than twenty years of experience as a successful wealth management adviser, Finn shares five simple and proven strategies for a woman at any stage of her life, whether starting a career, home raising children, or heading up a major corporation. Finn's Five Life-changing Rules of Investing will secure your financial future: 1. Invest in Stocks for the Long Run: Get the magic of compounding working for you, starting now. 2. Allocate your Assets: Strategize your investing to get the most of your returns. 3. Implement with Index Funds: Take advantage of "passive" investing with simple, low-cost, and diverse funds. 4. Rebalance Regularly: Sell high and buy low without much effort, to keep you on track toward your goals. 5. Keep Your Fees Low: Uncover hidden fees so you don't lose half of your wealth to Wall Street. Finn will also provide the tools you need to achieve long-term success no matter what the markets are doing or what the headlines say. So even in the face of uncertainty—such as the possible dumping of the fiduciary rule (requiring financial advisers to act in their client's best interests) by the Trump administration—*Smart Women Love Money* will help you protect yourself and all of your assets for your future. Whether you have \$10, \$10,000, or more, it's time to get smart about your money.

Can a renowned mathematician successfully outwit the stock market? Not when his biggest investment is WorldCom. In *A Mathematician Plays the Stock Market*, best-selling author John Allen Paulos employs his trademark stories, vignettes, paradoxes, and puzzles to address every thinking reader's curiosity about the market -- Is it efficient? Is it random? Is there anything to technical analysis, fundamental analysis, and other supposedly time-tested methods of picking stocks? How can one quantify risk? What are the most common scams? Are there any approaches to investing that truly

outperform the major indexes? But Paulos's tour through the irrational exuberance of market mathematics doesn't end there. An unrequited (and financially disastrous) love affair with WorldCom leads Paulos to question some cherished ideas of personal finance. He explains why "data mining" is a self-fulfilling belief, why "momentum investing" is nothing more than herd behavior with a lot of mathematical jargon added, why the ever-popular Elliot Wave Theory cannot be correct, and why you should take Warren Buffet's "fundamental analysis" with a grain of salt. Like Burton Malkiel's *A Random Walk Down Wall Street*, this clever and illuminating book is for anyone, investor or not, who follows the markets -- or knows someone who does.

Drawing from his experience as a securities analyst, economist, and investor, the author explains the workings of Wall Street and offers advice on determining the value and potential of stocks

"This is that rarity, a useful book."--Warren Buffett Howard Marks, the chairman and cofounder of Oaktree Capital Management, is renowned for his insightful assessments of market opportunity and risk. After four decades spent ascending to the top of the investment management profession, he is today sought out by the world's leading value investors, and his client memos brim with insightful commentary and a time-tested, fundamental philosophy. Now for the first time, all readers can benefit from Marks's wisdom, concentrated into a single volume that speaks to both the amateur and seasoned investor. Informed by a lifetime of experience and study, *The Most Important Thing* explains the keys to successful investment and the pitfalls that can destroy capital or ruin a career. Utilizing passages from his memos to illustrate his ideas, Marks teaches by example, detailing the development of an investment philosophy that fully acknowledges the complexities of investing and the perils of the financial world. Brilliantly applying insight to today's volatile markets, Marks offers a volume that is part memoir, part creed, with a number of broad takeaways. Marks expounds on such concepts as "second-level thinking," the price/value relationship, patient opportunism, and defensive investing. Frankly and honestly assessing his own decisions--and occasional missteps--he provides valuable lessons for critical thinking, risk assessment, and investment strategy. Encouraging investors to be "contrarian," Marks wisely judges market cycles and achieves returns through aggressive yet measured action. Which element is the most essential? Successful investing requires thoughtful attention to many separate aspects, and each of Marks's subjects proves to be the most important thing.
