"One cowboy is never enough." Rebecca Montgomery never expected to leave London and go to the American West, but this was how her brother saves her an impending marriage of convenience. She also never expected her brother to marry her by proxy to a trusted friend before dying on the journey. She quickly discovers that the Montana territory is a far cry from England, and so are the expectations of a wife at Bridgewater Ranch, for she's married not just to Dashiell, but also to his friend and fellow Scot, Connor MacDonald. Dashiell McPherson never expected to find himself wed to a woman he's never met, especially not a prim lady raised to believe her sexuality is something to be repressed rather than enjoyed. Can an inhibited woman accept not just one but two husbands? It will take ample Scottish brash, a fair amount of brawn and plenty of carnal persuasion to free Rebecca of her inhibitions and show her how treasured she is. Healing practices in Mesoamerica span a wide range, from traditional folk medicine with roots reaching back into the prehispanic era to westernized biomedicine. These sometimes cooperating, sometimes competing practices have attracted attention from researchers and the public alike, as interest in alternative medicine and holistic healing continues to grow. Responding to this interest, the essays in this book offer a comprehensive, state-of-the-art survey of Mesoamerican healers and medical practices in Mexico and Guatemala. The first two

essays describe the work of prehispanic and colonial healers and show how their roles changed over time. The remaining essays look at contemporary healers, including bonesetters, curers, midwives, nurses, physicians, social workers, and spiritualists. Using a variety of theoretical approaches, the authors examine such topics as the intersection of gender and curing, the recruitment of healers and their training, healers' compensation and workload, types of illnesses treated and recommended treatments, conceptual models used in diagnosis and treatment, and the relationships among healers and between indigenous healers and medical and political authorities.

This second edition of the Nursing Outcomes Classification (NOC) contains 260 outcomes. Each outcome includes a label name; a definition; a set of indicators that describe specific patient, caregiver, family, or community states related to the outcome; a 5point Likert-type measurement scale; and selected references used in the development of the outcome. Although we encourage the use of the indicators and measurement scale associated with the outcomes, the goal of the research team is to standardize the label name and definition for each outcome, which assist nurses in evaluating and quantifying patient status in relation to a particular outcome.
