Just what is Islam and what does it mean to be a Muslim in the world today? Since the events of 9/11 and 7/7, Islam has become one of the most controversial and misunderstood religions in the world. Introducing Islam encourages students to put aside their preconceptions and explore this fascinating religion. William Shepard traces the history of Islam from its origins in the life and career of Mohammed, through its classical expressions, to its interactions with the West in the modern world. A chapter is devoted to each major topic, including The Quran, Islamic law, Islamic theology, and the Sufi movement, as well as community rituals and Islamic art and culture. There is a survey of modern developments and four chapters are dedicated to individual countries, Turkey, Iran, Egypt and Indonesia. Fully revised and updated, the second edition of this core textbook adds crucial material on contemporary issues such as women in Islam and democratization and human rights. Illustrated throughout, the book also includes learning objectives, a glossary of key Arabic terms, comprehensive further reading lists and critical thinking boxes, helping students to critically engage with the material in each chapter. Further teaching and learning resources are available on the companion website at www.routledge.com/cw/shepard. This book continues to be essential reading for students of Islam worldwide.

The Object Constraint Language (OCL) has proven to be a valuable ingredient for the specification of UML models. It allows to formulate logical propositions for models that typically cannot be expressed in the visual modeling paradigms of UML. A similar textual ingredient is required for the imperative specification of behavior in certain applications of UML, most prominently Executable UML models and model transformation. There is no such imperative language in the UML standard, but there are several candidates for such a language that are based on OCL for expressions. One of them is ImperativeOCL, which is part of the OMG Query, Views, Transformations (QVT) standard. However, the embedding of OCL into several of these languages is what we call a non-modular embedding. Such a non-modular embedding results in problems w. r. t. to language semantics and/or sets up obstacles for the reuse of existing OCL tools and instruments. In our work we therefore define requirements for a modular embedding of OCL into an imperative language. We introduce our language SOIL (Simple OCL-based Imperative Language) which embeds OCL in a modular way. We provide an informal description of SOIL as well as a formal definition of the language syntax and semantics, and prove its consistency and type safety. We describe applications of our approach in two fields: first, the extension of the UML-based Specification Environment (USE) by an imperative language and, second, the development of the model transformation

tool XGenerator2 that has been successfully applied in several eGovernment projects. Our work makes three major contributions. First, we provide a critical review of the embedding of OCL into existing programming languages. Second, we provide a simple but already useful OCL-based imperative language with a sound and formal semantics that can be implemented out of the box using existing OCL engines. Third, our work contributes a general guideline for a safe embedding of OCL into other languages.

The period from 1680 to about 1720 was one of the most complex and difficult in the history of British politics, to contemporaries as well as to posterity. The parameters of political obligation were decisively shifted by the Revolution of 1688; statesmen and politicians had now to accustom themselves to the novelty of a parliament in session every year; Britain was almost continuously engaged in the most ambitious and expensive wars in her history to date; political parties were slow to form, and of doubtful repute when they did. Professor Kenyon's Ford Lectures, delivered in Oxford in 1976 and now published as a paperback for the first time, remain a standard account of the period. For this reissue, Professor Kenyon has written a new preface which discusses the book in the light of recent historiography.

In the course of the 20th century, a new worldview has arisen in Western society and culture that is defined in this book as "immanent mysticism." Several major philosophers are sensitive to such a sense of immanent mysticism. The same sensitivity is noticeable in the works of poets, painters, and other artists. It expresses the desire for transforming the way to meaningful living. A Taste of God shows that theological research programs are innovated by insights from aesthetics and studies of spirituality. The book's research indicates that contemporary Western culture requires a reframing of foundational theology. (Series: Nijmegen Studies in Theology - Vol. 3)

The question on salvation with its multifarious dimensions had always been a significant subject-matter of discussion from time immemorial. All the religious traditions attempt to formulate appropriate answers to the questions related to this, one of the most crucial issues in theological reflections. Still the concept remains wide open for further research. It is St. Paul who said that, -For now we see in a mirror, dimly, but then we will see face to face. Now I know only in part; then I will know fully, even as I have been fully known.- (1 Cor. 13:13) Salvation, as St. Paul conceives it, is a face to face vision of God in perfect knowledge merited through the person of Christ and through the gratuitous gift of grace. It is a passage from ignorance to truth, from darkness to light and from death to immortality (Br. Upa. I. iii. 27). <From Darkness to Light aims at an enhanced understanding of the concept of salvation, comparing the theological and soteriological positions of Thomas Aquinas and Ankara. The author has made an admirable attempt in Comparative Theology, deciphering and clarifying all related concepts of salvation in both the thinkers."
