This book provides primary care clinicians, researchers, and educators with a guide that helps facilitate comprehensive, evidenced-based healthcare of women and gender diverse populations. Many primary care training programs in the United States lack formalized training in women's health, or if they do, the allotted time for teaching is sparse. This book addresses this learning gap with a solid framework for any program or individual interested in learning about or teaching women's health. It can serve as a quick in-the-clinic reference between patients, or be used to steer curricular efforts in medical training programs, particularly tailored to internal medicine, family medicine, gynecology, nursing, and advanced practice provider programs. Organized to cover essential topics in women's health and gender based care, this text is divided into eight sections:

Foundations of Women's Health and Gender Based Medicine, Gynecologic Health and Disease, Breast Health and Disease, Common Medical Conditions,

Chronic Pain Disorders, Mental Health and Trauma, Care of Selected Populations (care of female veterans and gender diverse patients), and Obstetric Medicine. Using the Maintenance of Certification (MOC) and American Board of Internal Medicine blueprints for examination development, authors provide evidence-based reviews with several challenge questions and annotated answers at the end of each chapter. The epidemiology, pathophysiology, evaluation, diagnosis, treatment, and prognosis of all disease processes are detailed in each chapter. Learning objectives, summary points, certain exam techniques, clinical pearls, diagrams, and images are added to enhance reader's engagement and understanding of the material. Written by experts in the field, *Sex and Gender-Based Women's Health* is designed to guide all providers, regardless of training discipline or seniority, through comprehensive outpatient women's health and gender diverse care.

This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges but few medical students or residents enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in

aging patients and translates approaches to those conditions for physicians across specialties. Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of *Geriatrics for Specialists* expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field.

Medical professionalism faces distinctive challenges in the 21st century. In this chapter, we review the history of professionalism, address specific challenges physicians face today, and provide an overview of efforts to address these issues, including behavioral and virtue ethics approaches. First, we discuss core features professions share and the development of codes of medical ethics that guide the practice of western medicine. Second, we address challenges related to the doctor–patient relationship, continuity of care, cultural competence, conflicts of interest, and the regulation of quality of care through maintenance of certification. We then explore three cultural trajectories that have deeply influenced medical practice: the technologic imperative, physicians' collective neglect of structural factors impacting medicine, and the rise of commercialism. Finally, we describe efforts to address these challenges, focusing on the Physician Charter developed by the American Board of Internal Medicine and

widely endorsed by medical boards and societies internationally.

Hepatology is an expanding field – it's hard to keep up. The liver has been sitting there the whole time, but the knowledge surrounding this perplexing organ is exploding; this makes it hard to prepare for board and recertification exams, where 1 in every 4 questions pertains to hepatology. Until now, there has been no single, slim, but high-yield volume that summarizes the hepatology you need to know for the boards. This book has it nailed. The authors have collected every pearl of wisdom, high-yield factlet, liver "board buzzword," hepatic micrograph, and classic liver imaging study they could muster, all while keeping the book a manageable size - because who has time for more than manageable when you're busy? The answer to your study questions (and study time!) can be found inside: *Acing the Hepatology Questions on the GI Board Exam: The Ultimate Crunch-Time Resource*. Traditional textbooks usually feature long and detailed discussions that are not directly related to Board and recertification exams. On the flip side, many Board review manuals provide lists and bullet points lacking sufficient background and context. Inside *Acing the Hepatology Questions on the GI Board Exam*, Drs. Brennan Spiegel and Hetal Karsan present time-tested and high-yield information in a rational, useful, and contextually appealing format. Why You Will Need to Read *Acing the Hepatology Questions on the GI Board*

Exam: Focuses exclusively on Hepatology review – an area that comprises 25% of the Board exam Carefully vetted board-style vignettes with color images Comprehensive yet succinct answers using a high-yield format Emphasis on key clinical pearls and “board buzzwords” Answers to classic board “threshold values” questions that you need to know but always seem to forget: If an echinococcal liver cyst exceeds XX cm, then the risk of rupture is clinically significant and surgery is warranted Rapid fire crunch-time exam with 135 classic one-liners such as: Spider web collaterals + caudate lobe hypertrophy = Diagnosis Stepwise fever + temperature-pulse dissociation + rose spots + hepatitis = Diagnosis With its focus on pearl after pearl, emphasis on images, and attention to high-yield “tough stuff” vignettes you don’t know the answers to (yet), *Acing the Hepatology Questions on the GI Board Exam* is truly the ultimate crunch-time resource for acing often vexing liver section of the examination, taking recertifying examinations, looking good on clerkship rounds, or for just challenging yourself with interesting and entertaining vignettes.

In *By the Bedside of the Patient*, Nortin Hadler places current efforts to reform medical education--from the undergraduate level through residency programs and on to continuing medical education--in historical context. In doing so, he traces the evolution of medical school curricula, residency and fellowship programs, and the clinical practices they promoted. Hadler examines crucial junctures in history to locate the seeds for reform. Some believe that medical education and training should highlight literature, ethics, and culture, while others emphasize science and efficiency to abbreviate the time from entry to licensure. Neither of these approaches, Hadler argues, maintains or improves patient care, which should be at the core of medical education and practice. Hadler contends that most reform attempted thus far constitutes, at best, little more than a reshuffling of the basic curriculum and, at worst, an augmenting of medicine's predilection to measure, grade, and record. Examining generational changes in medical education, Hadler mines sixty years of training and practice to identify mistaken approaches and best practices. Ultimately, in the contemporary era of managed care, Hadler argues for a clinical practice that draws on

the best available scientific knowledge, transmits the wisdom of experienced clinicians, reforges an empathetic relationship between physician and patient, and treats each patient as an individual--all centered on restoring the mandate to care.

Each year, *Advances in Surgery* reviews the most current practices in general surgery. A distinguished editorial board, headed by Dr. John Cameron, identifies key areas of major progress and controversy and invites preeminent specialists to contribute original articles devoted to these topics. These insightful overviews in general surgery bring concepts to a clinical level and explore their everyday impact on patient care.

Value driven healthcare is the lasting legacy of the Affordable Care Act, which had three goals: to improve access to healthcare by increasing healthcare insurance coverage, to improve the patient's experience and quality of care, and to slow the rate of increase in healthcare costs. Regardless of changes to the financing of healthcare or changes in policy, value-based purchasing for healthcare is to remain a constant feature of the healthcare horizon. Value-based purchasing is a demand side strategy to reward quality in health care delivery. Value-based purchasing involves cost considerations and includes the actions of employers, the

public sector, health plans, and individual consumers in making healthcare decisions. Effective health care services and high performing health care providers are incentivized to provide quality outcomes and to control cost. Value-based purchasing drives quality metrics which are publicly reported and serve as important levers for changes in healthcare delivery. Geriatric patients consume a disproportionate share of healthcare resources, so CMS directs Medicare and drives geriatric healthcare models. All other insurers generally model CMS/Medicare guidelines. Innovative geriatric care models which demonstrate improved outcomes and cost moderation are scaled and lessons learned used to create new healthcare models. The best data for broader value driven healthcare comes from the geriatric models, which currently have the best data available. This book traces the origins of value-based purchasing and current geriatric care models and synthesizes their implications for today's changing health system. It also discusses healthcare accountability and risk sharing. The audience includes geriatric healthcare professionals, but also a wider audience interested in broader healthcare models and value driven healthcare from a policy, economic, and ethical perspective. These include primary care physicians, specialists who work with aging patients, hospital administrators, healthcare educators, healthcare organizations, and all medical professionals working with aging patients and patients affected by healthcare reform.

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging

loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use *Retooling for an Aging America* to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.
