This thesis is focusing on three little-explored contextual conditions that are important for a better understanding of digital platform ecosystems: digital platforms in a nascent stage of maturity,

digital platforms built by incumbents, and digital platforms embedded in the IoT phenomenon. Thus, the thesis contributes to the question of how established companies navigating nascent digital platform ecosystems in the IoT. The work builds and contributes to the literature on digital platform ecosystems. Three main contributions are made through explorative qualitative research in the form of Delphi and case studies as well as through systematic literature research on the above-mentioned themes: First, the thesis synthesizes important knowledge about the nascent stage of digital platform ecosystems and identifies value co-creation challenges specific to this early maturity stage. Second, given the increasing importance of established companies in the platform discourse, this thesis identifies the intra- and inter-organizational challenges that incumbent organizations face in building digital platform ecosystems, emphasizing the importance of the organizational type in building a platform ecosystem. Third, the dissertation positions platforms in the IoT as a new digital platform instantiation within the scholarly platform discourse and outlines important phoneme-related characteristics that determine value creation.

On a warm September night in 2002, former acquaintances Alexis Maybank and Alexandra Wilkis reconnected at a mixer for new students at Harvard Business School. Alexis had just ended a four-year run at eBay during the dotcom boom and bust. Alexandra had just spent three years as an investment banker at Merrill Lynch. Now they were entering the country's top training ground for future titans of Wall Street and the Fortune 500. Little did either suspect that five years later, they'd become famous not in finance or consulting or corporate management, but at the bleeding-edge intersection of fashion and technology. Gilt Groupe – launched by Alexis, Alexandra, and three colleagues in 2007 – is one of the most fascinating startups of recent years, with a valuation of more than \$1 billion. And it all began with one bold idea: to bring sample sales online and change the way millions shop. As Alexis and Alexandra write about the day Gilt.com went live: “We had created a website that could potentially change the rules of retail, for both shoppers and brands. If shopping was traditionally a slow, leisurely activity that might consume an entire day, it would now be competitive, addictive, urgent, thrilling—a rush delivered at the same time each day. Shopping would become not just easier, but so much fun.” But turning that vision into reality wasn't easy. Designers had long controlled their own sample sales by staging them in anonymous, makeshift locations and strictly limiting invitations. Those lucky enough to hear about a Marc Jacobs or Hermès sample sale would drop everything and run for dramatic, fleeting bargains. Why should elite brands support a new startup trying to replicate the experience online? And even if brands like Valentino, Christian Louboutin, and Zac Posen got on board, would shoppers embrace such a website? Would the kind of people who love high-end fashion really visit a new online sale each day? Was “accessible luxury” a breakthrough idea or an absurd oxymoron? Alexis and Alexandra share their perspective in this dramatic story of Gilt's birth, rise, and evolution. They show how they juggled the conflicting needs of their suppliers, engineers, marketers, and potential investors. They explain how they blended their individual strengths and weaknesses and managed their rapidly growing team. They cover the growing pains of expanding into new categories like housewares, travel, and menswear. And they take us through the darkest moments of the recession when Gilt might easily have died. As you'll learn from the true story of Gilt, anything is possible for those with the creativity to recognize a new opportunity and the perseverance to make it real.

The Treasury Sub-Committee calls for much greater transparency from the Treasury in accounting for the liabilities taken on by the nationalisation and part-nationalisation of financial institutions. The report recommends that these disclosures appear in the annual Treasury resource accounts. Furthermore they should be at least as comprehensive as those made by major corporations and go further than meeting the minimum acceptable accounting standards. In particular, the Report notes that the Treasury's 2007-08 Annual Report and Accounts cover the Government's financial relationship with Northern Rock but do not comment on its performance under temporary public ownership. Given the level of interest in the fully nationalised institutions of Northern Rock and Bradford & Bingley, and the Treasury's role in their governance, the report recommends that key performance information for these institutions be published in the resource accounts as well. The wholesale nationalisation of Northern Rock, and Bradford & Bingley has created governance responsibilities for the Treasury while these entities remain under public ownership. The Government's announcements of October 2008 created further responsibilities regarding the oversight of part-nationalised banks, and created a new body, UK Financial Investments (UKFI). The report calls for UKFI to report annually to Parliament and to be accountable to the Treasury Committee. The Committee wants the Government to identify and publish

performance indicators for UKFI, and to report against these measures on a six-monthly basis. All these developments are additional challenges for the Treasury and require it to act in areas its current staff base may not be fully equipped for or familiar with. The Government must ensure the Treasury is sufficiently resourced to manage the extended responsibilities arising from the economic downturn, especially those regarding financial stability.

Unprecedented consumer power, enabled by technology and globalization is driving a revolutionary transformation that will lead to the demise of retail as we know it. The authors provide a unique and essential view of the future of the industry, arguing that a new business model is necessary in these new times, one based on: Preemptive, precise and perpetual distribution; A neurological customer connection; and total control of the value chain. Some of the authors' key insights and predictions include: * The collapse of the traditional retail/wholesale business model: The more enlightened retailers and wholesalers understand they must own and control the creation, distribution and presentation of their value, directly to the consumer.* Internet retailers such as Amazon, must ultimately open bricks and mortar stores: In an over-competed marketplace, preemptive distribution of value to precisely where and how the consumer wants it is vital, meaning that retailers and wholesalers must utilize all available distribution platforms, as well as create new distribution ideas.* Successful control of the total value chain is the key driver of economic success: Control does not necessarily mean ownership, as in complete vertical integration. Rather, it means that one must gain dominant control over all its functions as companies like Wal-Mart and Ralph Lauren, who don't own, but certainly control, their total value chains, demonstrate. * The imperative to control the value chain will favor those who own production: An increasing number of U.S. brands, wholesalers and retailers, will be acquired by Chinese manufacturers and other emerging countries who can produce consumer goods at a low cost.
