This book explores the properties and health benefits of three important Adaptogen Herbs and introduces the reader to its research proven uses in medicine. The health claims made on Rhodiola rosea, Eleuthero (*Eleutherococcus senticosus*) and Jiaogulan (*Gynostemma pentaphyllum*) are substantiated in detail by extensive scientific references. This book is not too technical for the average reader, but detailed enough for the medical practitioner interested in becoming acquainted with these herbs. The book details history, the role of herbs in maintaining health and fighting disease, bioactive components, typical doses, side effects and toxicity. This book remains a great reference on these three herbs. Dr. Saleeby was the founder of Vita Sanus™ Formulations (Vita Sanus Nutraceuticals) (1998- 2006. Held the company until it was sold to Dr. Trevor Neil, DPM in 9/2006) With the publication of this book he has been called upon to formulate unique and exciting dietary supplements covering a range of

uses from sports ergogenic aids to fertility formulas. He was the chief formulator and consultant for SSN, Incs PREGAME Tennis and PREGAME Golfers formula sports enhancement dietary supplements launched in April 2004. He was asked to come up with a unique formula for AdapTX Labs CardioFactor and PreFight line of supplements (2007-2008). As chief formulator for Ovion BioPharma/ Pharlian Labs he put his knowledge to use in formulating a subfertility/infertility herbal cycle pulse product (2008-2009). Some of the herbs discussed in this book have found their way into these formulations. Dr. Saleeby already a medical consultant for the Aerobics & Fitness Association of America (AFAA) became in late 2008 the medical/nutritional consultant on the advisory board of BeachBody / Product Partners during their new launch of a meal replacement shake (Shakeology). Current research has given us a more complete understanding of how the chemicals in foods and herbs interact with natural and synthetic drugs. In some cases a single food or supplement can profoundly increase or decrease the toxicity and/or efficacy of a single drug. Although it is standard practice to examine the effects of food consumption on the absorption and pharmacokinetics of new drugs, the issue has become greater than "should this medicine be taken with or without food." Nutrient-Drug Interactions focuses on food, herbals, and their chemical constituents as contributors to human health through control of metabolism, primarily as they relate to chronic disease development and treatment. The book's organization highlights the ailment being treated or prevented and the targets of therapy. Each chapter provides a comprehensive examination of the macronutrient, micronutrient, and phytochemical impact on drug action and includes advice on modification or supplementation in those cases where diet is a factor. The chapters focus on the molecular mechanism by which a food or chemical is thought to modify disease process and drug behavior. The book describes the roles of genetic variation and polymorphism in determining nutrient/drug responses, how they might be "profiled" to identify those likely to demonstrate specific interactions, and who would benefit from adjuvant or complementary therapies. The book explores how what is consumed affects response, whether on a population or individual level, to the pharmacologic agents that are the mainstay of chronic disease

With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the Handbook of African Medicinal Plants provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the

Dietary supplements are widely available through a rapidly expanding market of products commonly advertised as beneficial for health, performance enhancement, and disease prevention. Given the importance and frequent evaluation of physical performance and health as a criteria to join and remain in the military, the use of these

products by military personnel has raised concern regarding over-all and long-term efficacy and safety. This evaluation is especially difficult, as many of these supplements contain multiple ingredients, have a changing composition over time, or are used intermittently at doses difficult to measure. This book analyzes the patterns of dietary supplement use among military personnel, examines published reviews of the scientific evidence, and identifies those dietary supplements that are beneficial and/or warrant concern due to risks to health or performance. The book also recommends a system to monitor adverse health effects and a framework to identify the need for active management of dietary supplements by military personnel. Military policy makers, personnel, and recruits will find this book useful, as will nutritionists, athletes, and others working in strenuous environments.
