Much time and money is devoted to training - but courses do not always produce the outcomes desired. As a result many training organizations need to rethink the way they plan, design, deliver and evaluate their courses. Here Peter Taylor shows how to improve the quality of the entire training process - from initial assessments through to delivery and evaluation - by creating effective partnerships between trainers, trainees and other stakeholders. This wonderfully practical guide will allow users to adapt the PCD approach to their local conditions and create a sustainable improvement in training quality.

This book examines the whole new world of possibilities in using mobiles and the Internet to address healthcare challenges.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. This volume presents findings and insights from contemporary thinking and research on the application of Information Technology in Educational Management. It analyzes the ways in which ICT has been used, across a range of educational institutions, to support various aspects of educational management. It is the latest in a series of books produced by IFIP Working Group 3.7.

Well-educated populations are important aspects of any contemporary society, as education increases national and global development and the positive expansion of communities to participate actively in civil matters also increases. Educational equality is based on the principles of administrative competence and fairness of access and distribution of resources, opportunities, and treatment, which ensures success for every

person. Ensuring equal access to quality education requires addressing a wide range of persistent inequalities in society and includes a stronger focus on how different forms of inequalities intersect to produce unequal opportunities or outcomes that affect marginalized and vulnerable groups. Policy and Practice Challenges for Equality in Education takes a multifaceted look at issues of equality and inequality in education as related to policy, practice, resource access, and distribution. As such, this book explores the potential practices in education that serve to mitigate and transform unproductive practices which have left societies scarred by social and educational inequalities. The chapters provide a critical analysis of the manifestations of inequalities in various educational contexts and discerns how broader social inequalities are informed by education-related matters. This book is ideal for sociologists, administrators, instructors, policymakers, data scientists, community leaders, practitioners, stakeholders, researchers, academicians, and students interested in educational equality and the unique challenges being faced worldwide.

This series contains the decisions of the Court in both the English and French texts. This is a pivotal period in Sri Lanka's economic development. The end of conflict opens a door for accelerated economic growth and poverty reduction. Reform is needed to regain momentum because fiscal imbalances and rising public debt could jeopardize macroeconomic stability. The economy would benefit from significant trade and commercial policy reform. The labor market suffers from sluggish growth of formal sector employment and from skills mismatches, which can be addressed by changes in education policy and systems. The book analyzes these and related critical constraints on the Sri Lankan economy, and proposes a set of policy reforms that would lay the foundations for more rapid and inclusive development.

Information and communication technology (ICT) has the potential to revolutionize education equity, quality, and efficiency. South Asia's governments have recognized this potential and invested in ICT-focused education initiatives and projects. While these efforts helped to introduce ICT-enabled teaching and learning practices, they may not be sufficient for widespread sustainable adoption within their countries. The stage of implementation and impact of investments also vary significantly from country to country in South Asia. This paper examines the existing state and gaps of ICT in

education of three South Asian countries---Bangladesh, Nepal, and Sri Lanka---and suggests strategies to address these gaps.

According to Forbes, we generate almost 2.5 quintillion bytes of data every day. The next generation of agriculture heavily depends on data. The ability to capture, sort, analyze and extract actionable intelligence from large data sets to reveal patterns (human, climate, market) and related trends is an important emerging field. The increase in the use of Internet of Things (IoT) devices would only add to this data deluge. The Economist rightly called data as the world's most valuable resource , while some calling data the new oil . Agriculture would be one of the major users of IoTs.

How can individuals, organizations and governments build capacities and processes in place to take advantage of this huge influx of data. This coupled with existing data streams (weather, satellite imagery, markets etc.,) would create an ecosystem which if managed efficiently would provide rich dividends especially in the agriculture sector where the right information at the right time will make a great influence in the livelihoods of people involved in agriculture and allied activities. This publication looks at how various initiatives are leveraging data, related to agriculture value chains, to influence decision making and efficient service delivery together with addressing key building blocks such as interoperability, data sharing, data security and the necessary policies and regulations that are needed to be implemented to sustain the data ecosystem.

Lawrence Lessig, “the most important thinker on intellectual property in the Internet era”, masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such control over what we can and can’t do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.
