The Commercial Storage of Fruits, Vegetables, and Florist and Nursery Stocks Robert E. Hardenburg, Alley E. Watada, Chien Yi Wang, 1986 Note for the electronic edition: This draft has been assembled from information prepared by authors from around the world. It has been submitted for editing and production by the USDA Agricultural Research Service Information Staff and should be cited as an electronic draft of a forthcoming publication. Because the 1986 edition is out of print, because we have added much new and updated information, and because the time to publication for so massive a project is still many months away, we are making this draft widely available for comment from industry stakeholders, as well as university research, teaching and extension staff.

Fresh-Cut Fruits and Vegetables Olusola Lamikanra, 2002-02-14 A comprehensive reference for the emerging fresh-cut fruits and vegetable industry, *Fresh-cut Fruits and Vegetables: Science, Technology and Market* focuses on the unique biochemical, physiological, microbiological, and quality changes in fresh-cut processing and storage. It highlights the distinct equipment design, packaging requirements, production economics, and marketing considerations for fresh-cut products. Based on the extensive research in this area during the last 10 years, this reference is the first to cover the complete spectrum of science, technology, and marketing issues related to this field.

Quality of Fresh and Processed Foods Fereidoon Shahidi, Arthur M. Spanier, Chi-Tang Ho, Terry Braggins, 2003-12-31

Quality is a composite term encompassing many characteristics of foods. These include color, aroma, texture, general nutrition, shelf-life, stability, and possible presence of undesirable constituents. Obviously deterioration of quality may lead to changes in the attributes that characterize the food in its fresh or freshly processed state. In addition, quality enhancement of products may be carried out using appropriate processing techniques. Interaction of different components present with one another could have a profound effect on sensory quality of products. Meanwhile, presence of extraneous matter such as pesticides and debris may also contribute to a compromise in the quality of foods. In addition, processing often brings about changes in many attributes of food including its nutritional value. Thus, examination of process-induced changes in food products is important. In this book, a cursory account of quality attributes of fresh and processed foods is provided. The book is of interest to food scientists, nutritionists and biochemists in academia, government and industry.

Postharvest Handling Robert L. Shewfelt, Stanley E. Prussia, 2012-12-02 Postharvest Handling: A Systems Approach introduces a new concept in the handling of fresh fruits and vegetable. Traditional treatments have been either physiologically based with an emphasis on biological tissue or technologically based with an emphasis on storage and handling. This book integrates all processes from production practices through consumer consumption with an emphasis on understanding market forces and providing fresh product that meets consumer expectations. Postharvest physiologists and technologists across the disciplines of agricultural economics, agricultural engineering, food science and horticulture along with handlers of minimally-processed products within the fresh produce fruit and vegetable processing industries will find this to be an invaluable source of information. - Uses a systems approach that provides a unique perspective on the handling of fresh fruits and vegetables - Designed with the applied perspective to complement the more basic perspectives provided in other treatments - Provides the integrated, interdisciplinary perspective needed in research to improve the quality of fresh and minimally processed products - Emphasizes that the design of handling systems should be market-driven rather than concentrating on narrow specifics

Global Food Trade and Consumer Demand for Quality Barry Krissoff, Mary Bohman, Julie Caswell, 2013-03-14 Consumers have always been concerned about the quality, and particularly the safety, of the foods they eat. In recent years this concern has taken on additional prominence. Consumer focus on food safety has been sharpened by reports about new risks, such as that posed by mad cow disease, and about more familiar sources of risk, such as food borne pathogens, pesticides, and hormones. At the same time, some consumers are increasingly interested in knowing more about how their food is produced and in selecting products based on production practices. Some of the questions consumers are asking include whether food is produced with the use of modern biotechnology, whether it is organically produced, how animals are treated in meat and egg production systems, and whether food is produced using traditional methods. Recent trends also show increased consumer demand for a variety of food products that are fresh, tasty, and available on a year-round basis. This has fostered

increased global trade in food. For example, consumers in temperate climates such as North America are able to buy raspberries throughout the year, and Europeans can enjoy South American coffee. Trade in processed food products is actually increasing more rapidly than trade in agricultural commodities, further addressing the demand for variety among consumers.

Minimally Processed Refrigerated Fruits & Vegetables R.C. Wiley,1994-04-30 Introduction to minimally processed refrigerated fruits and vegetables; Initial preparation, handling, and distribution of minimally processed refrigerated fruits; Preservation methods for minimally processed refrigerated fruits and vegetables; Packing of minimally processed fruits and vegetables; Some biological and physical principles underlying modified atmosphere packaging; Microbiological spoilage and pathogens in minimally processed refrigerated fruits and vegetables; Nutritional quality of fruits and vegetables subject to minimally processes; Regulatory issues associated with minimally processed refrigerated foods.

Advances in Fresh-Cut Fruits and Vegetables Processing Olga Martin-Belloso,Robert Soliva Fortuny,2010-10-21 Despite a worldwide increase in demand for fresh-cut fruit and vegetables, in many countries these products are prepared in uncontrolled conditions and have the potential to pose substantial risk for consumers. Correspondingly, researchers have ramped up efforts to provide adequate technologies and practices to assure product safety while keeping n

Handbook of Farm, Dairy and Food Machinery Engineering Myer Kutz,2019-06-15 Handbook of Agricultural and Farm Machinery, Third Edition, is the essential reference for understanding the food industry, from farm machinery, to dairy processing, food storage facilities and the machinery that processes and packages foods. Effective and efficient food delivery systems are built around processes that maximize efforts while minimizing cost and time. This comprehensive reference is for engineers who design and build machinery and processing equipment, shipping containers, and packaging and storage equipment. It includes coverage of microwave vacuum applications in grain processing, cacao processing, fruit and vegetable processing, ohmic heating of meat, facility design, closures for glass containers, double seaming, and more. The book's chapters include an excellent overview of food engineering, but also regulation and safety information, machinery design for the various stages of food production, from tillage, to processing and packaging. Each chapter includes the state-of-the art in technology for each subject and numerous illustrations, tables and references to guide the reader through key concepts. - Describes the latest breakthroughs in food production machinery - Features new chapters on engineering properties of food materials, UAS applications, and microwave processing of foods - Provides efficient access to fundamental information and presents real-world applications - Includes design of machinery and facilities as well as theoretical bases for determining and predicting behavior of foods as they are handled and processed

Fermented Beverage Production Andrew G.H. Lea,John R. Piggott,2012-12-06 Fermented Beverage Production, Second

Edition is an essential resource for any company producing or selling fermented alcoholic beverages. In addition it would be of value to anyone who needs a contemporary introduction to the science and technology of alcoholic beverages. This authoritative volume provides an up-to-date, practical overview of fermented beverage production, focusing on concepts and processes pertinent to all fermented alcoholic beverages, as well as those specific to a variety of individual beverages. The second edition features three new chapters on sparkling wines, rums, and Latin American beverages such as tequila, as well as thorough updating of information on new technologies and current scientific references.

Understanding Food Amy C. Brown, 2010 UNDERSTANDING FOOD: PRINCIPLES AND PREPARATION, 4e, International Edition is a best-selling food fundamentals text ideal for an undergraduate course that covers the basic elements of food preparation, food service, and food science. It is contemporary and comprehensive in coverage and introduces students to the variety of aspects associated with food preparation. UNDERSTANDING FOOD: PRINCIPLES AND PREPARATION, 4e, International Edition thoroughly explores the science of food through core material on food selection and evaluation, food safety, and food chemistry. The various aspects of food service are covered: meal planning, basic food preparation, equipment, food preservation, and government regulations. The final sections of the text cover food preparation, classification, composition, selection, purchasing, and storage information for a range of traditional food items. A rich illustration and photo program and unique pedagogical features make the information easily understandable and interesting to students.

Post-harvest Pathology Dov Prusky, Maria Lodovica Gullino, 2009-12-01 As a collection of papers that includes material presented at the 2008 International Congress for Plant Pathology, this text features research right at the leading edge of the field. The latest findings are particularly crucial in their implications for fruit production; an important market sector where in some areas up to 50 per cent of the crop can be lost after harvest. While post-harvest fruit treatments with fungicides are the most effective means to reduce decay, rising concerns about toxicity have led to the development of alternative approaches to disease control, including biological methods, the subject of three chapters of this book. With several new techniques requiring modification of current post-harvest practices, it is more important than ever to stay abreast of the latest information. Other chapters deal with the mechanisms of host fruit and vegetable resistance, fungal pathogenicity factors and their relationship with the host response, and a number of subjects related to disease assessments before harvest as well as their relationship to the postharvest treatment of fruits and vegetables. The book also includes several useful case studies of crops such as kiwifruit and peaches, where different approaches at the pre- and post-harvest levels are combined to good effect. With food production issues gaining an ever higher profile internationally, this text makes an important contribution to the debate.

Masters Theses in the Pure and Applied Sciences W. H. Shafer, 1982-02-01 Masters Theses in the Pure and Applied

Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) * at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volume were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 25 (thesis year 1980) a total of 10,308 theses titles from 27 Canadian and 214 United States universities. We are sure that this broader base for theses titles reported will greatly enhance the value of this important annual reference work. While Volume 25 reports theses submitted in 1980, on occasion, certain universities do report theses submitted in previous years but not reported at the time.

Naturopathic Oncology Neil McKinney, 2012-10 Updated for 2012, this book, Dr. Neil McKinney's fourth on naturopathic oncology, is updated with the rewards of clinical practice, study, research and reader feedback over the last several years. Patients and integrative physicians will find it easier to navigate, more complete, and of real service. DO: use this book to be informed about your best options, and what to expect them to accomplish. THEN: get expert guidance from a licensed, accountable, health professional team experienced in treating cancer. Cancer is a life-threatening disease in most cases. You do not have the objectivity, experience or knowledge to make critical medical decisions alone. This is not just a legal disclaimer! Cancer is unforgiving of delays and poor choices.

Food Packaging and Preservation M. Mathlouthi, 2013-12-14 This book is an updating of *Food Packaging and Preservation, Theory and Practice* published in 1986 by Elsevier Applied Science. Since that date, many things have changed in the world. Hence the name given to the first IFTEC meeting held at the Hague (NL), November 15-18, 1992 *Food Technology for a Changing World*. Is the world changing for better or worse and what can food technology improve? The keynote lecture of the IFTEC meeting dealt with hunger and the challenge it represents to food science and technology. In the preface to the 1986 book it was suggested that food packaging could solve some of the problems of crop preservation in countries where starvation is prevalent. However, such thoughts did not solve any problems. The famine is still spreading in Africa. The unbalanced north-south situation evoked in the 1986 preface has not improved. The international market of foods and agricultural products is constantly changing and food packaging scientists can only explore new ways to help cope with this. Some of these ideas are approached in this book, particularly in chapters 9, 10 and 12.

Rancho Costa Nada Phil Garlington,2003-01-01 Rancho Costa Nada outlines the principles for the dirt cheap desert homestead, including transportation, sanitation, food storage, electricity, and much, much more, plus fascinating portraits of the desert homesteaders who are Phil Garlington's neighbours. This book is an American classic, full of ingenuity and good old Yankee know-how, and making do, and living way off the grid, and getting by on your own without kissing anybody's ass, or being a slave to the consumer economy. This is an amazing tale of what can be done on a low-tech scale with good old American free-thinking in these high-tech times.

Edible Films and Coatings for Food Applications Milda E. Embuscado,Kerry C. Huber,2009-06-10 Edible films and coatings play an important role in the quality, safety, transportation, storage, and display of a wide range of fresh and processed foods. Edible films and coatings, while preventing moisture loss and maintaining quality, prevent spoilage and microbial contamination of foods. The edible film and coating industry is now a multimillion dollar industry. Less than \$1 million in 1999, the market has grown to more than \$100 million and is expected to grow to \$350 million by 2008, according to James Rossman of Rossman Consulting. Pharmaceutical and consumer products have been responsible for the tremendous increase. This growth has produced an enormous amount of scientific articles, patents, and research projects undertaken by members of the food industry, academia, and research institutions. *Edible Films and Coatings for Food Applications* brings together this vast wealth of scientific knowledge in a systematically organized volume. It examines the science, application, function, and market for edible films and coatings.
