Use your Instant Pot—or other electric pressure cooker or multi-cooker—to make fresh and flavorful, safe and natural, fast and convenient foods for your baby! Parents everywhere are turning to do-it-yourself baby food making. They do so to ensure that the food they feed their children is all-natural and free of additives. They do it because, in recent years, pediatricians and dietitians have been recommending that a baby's diet—and especially a toddler's diet—feature a wide variety of ingredients, well beyond what you can buy in jars at the supermarket. And, nothing to sneeze at, they do it to save money—sometimes lots of money. How do they find the time? It isn't always easy. Enter the wildly popular Instant Pot, along with other brands of electric pressure cooker, the perfect solution for time-crunched moms and dads. Pressure cooking is skyrocketing in popularity in large part because of its speed. You can cook up a batch of baby purees, fruit sauces, or cereals in a matter of minutes. Consider how long some classic ingredients in baby foods, such as potatoes, apples, and squash, would take to cook up on a stove top or in an oven. Now reduce that time to a fraction of what it was and you can see why pressure cooking is the ideal method for making baby foods yourself. No less an expert than Barbara Schieving, the world's most widely read blogger on pressure cooking (her blog is called Pressure Cooking Today), author of the best-selling *The Electric Pressure Cooker Cookbook*, and a mom and recent grandmother herself, delivers here more than 50 tasty and good-looking recipes that will make you feel good about how you are feeding

The Natural, No-Fuss, No-Purée Method for Starting Your Baby on Solid Foods “[Baby-Led Weaning] makes life so much easier.” —The Times, London Baby-Led Weaning explodes the myth that babies need to be spoon-fed and shows why self-feeding from the start of the weaning process is the healthiest way for your child to develop. With baby-led weaning (BLW, for short), you can skip purées and make the transition to solid food by following your baby's cues. At about six months, most babies are ready to join the family at the kitchen table and discover food for themselves. Baby-Led Weaning is the definitive guide to this crucial period in your child's development, and shows you how to help your baby: Participate in family meals right from the start Experiment with food at his or her own pace Develop new abilities, including hand-eye coordination and chewing Learn to love a variety of foods and to enjoy mealtimes Baby-led weaning became a parenting phenomenon in the UK practically overnight, inspiring a fast-growing and now international online community of parents who practice baby-led

weaning—with blogs and pictures to prove it! In *Baby-Led Weaning*, world-leading BLW authority Gill Rapley and early BLW practitioner and coauthor Tracey Murkett deliver everything you need to know about raising healthy, confident eaters.

Children's eating habits change often between infancy and preschool. Dr. Paula's *Good Nutrition Guide for Babies, Toddlers, and Preschoolers* provides nutrition guidelines for young children and gives parents confidence in this confusing and important area. Pediatrician Paula Elbirt discusses nutrition by age group. Breastfeeding, formula, solids, allergy issues, gas, and burping are issues for infants. Topics for toddlers include creating a healthful diet, snacks, whole versus skim milk, tantrums and food, and eating styles. Food issues change again for preschoolers, and include friends' influence on eating habits, what to do when a child is cranky from hunger, and much more. Sample recipes and menus are provided for each group. Dr. Elbirt describes important differences between emerging eating disorders and odd but harmless food preferences kids embrace briefly and then discard. Whether they have "fussy eaters" or are looking for better ways to provide their children with the best nutrition, Dr. Paula's *Good Nutrition Guide for Babies, Toddlers, and Preschoolers* has the information parents need.

A baby can be a good excuse to skip a party, but . . . goodbye alone time, hello awkward new social obligations. All parents want the same things: to balance work and home life, to raise happy kids, to never attend a baby drumming class, and to build a secret room in their home where they can hide (preferably not the bathroom). Yes, an introverted parent would more keenly want to be free of the slew of attention and expectations that accompany both pregnancy and parenthood, but even the most outgoing person is sure to reach their limit eventually. Here, with laugh-out-loud humor and well-earned experience, Julie Vick offers coping mechanisms for everything from sharing the news that you are becoming a parent to the moment the baby is born (one way or another, it will happen), from managing doctor's visits to handling playdates. She offers advice on finding childcare and ignoring the nursing versus formula conversation with strangers. Witty yet valuable, her tips, checklists, and the occasional chart focus on the time from pregnancy through preschool.

In this groundbreaking historical work, Amy Bentley explores how the invention of commercial baby food shaped American notions of infancy and influenced the evolution of parental and pediatric care. Until the late nineteenth century, infants were almost exclusively fed breast milk. But over the course of a few short decades, Americans began feeding their babies formula and solid foods, frequently as early as a few weeks after birth. By the 1950s, commercial baby food had become emblematic of all things modern in postwar America. Little jars of baby food were thought to resolve a multitude of problems in the domestic sphere: they reduced parental anxieties about nutrition and health; they made caretakers feel empowered; and they offered women entering the workforce an irresistible convenience. But these baby food products laden with sugar, salt, and starch also became a gateway to the industrialized diet that blossomed during this period. Today, baby food continues to be shaped by medical, commercial, and parenting trends. Baby food producers now contend with health and nutrition problems as well as the rise of alternative food movements. All of this matters because, as the author suggests, it's during infancy that American palates become acclimated to tastes and textures, including those of highly processed, minimally nutritious, and calorie-dense industrial food products.
