TOP KNIFE: The Art & Craft of Trauma Surgery Asher Hirshberg,, Kenneth L Mattox, 2004-10-01 This book will help you take a badly wounded patient to the operating room, organize yourself and your team, do battle with some vicious injuries and come out with the best possible result. It is a practical guide to operative trauma surgery for residents and registrars, for general surgeons with an interest in trauma, and for isolated surgeons operating on wounded patients in military, rural or humanitarian settings. A surgical atlas may show you what to do with your hands but not how to think, plan and improvise. Here you will find practical advice on how to use your head as well as your hands when operating on a massively bleeding trauma patient. The first part of this book presents some general principles of trauma surgery. The second part is about trauma surgery as a contact sport. Here we show you how to deal with specific injuries to the abdomen, chest, neck and peripheral vessels. The single most important lesson we hope you will derive from this book is to always keep it simple because, in trauma surgery, the simple stuff works.

Surgical Critical Care Mazyar Kanani, Simon Lammy, 2015-07-16 Surgical practice has changed enormously since the first edition of Surgical Critical Care Vivas, as shown by the introduction of the MRCS Part B OSCE. This landmark book has been fully updated to reflect the latest NICE and SIGN guidelines and common ALS principles in critical care patients, as well as current ATLS® and CCrISP® guidelines (such as CT scanning in trauma). The alphabetical format of the previous edition is replaced by an ABCDE chapter format, incorporating an escalating level of diagnostic and management complexity in conjunction with a concise mini-bibliography in each chapter, enabling the reader to rapidly access the required information. Covering both non-ICU-based patients and basic fundamentals of ICU care, the chapters introduce standard definitions, pathological processes and diagnostic features, before discussing common investigations and suggested

management plans. A must-have revision guide for all surgical trainees, from final year medical students through to junior surgical registrars.

50 Landmark Papers Every Acute Care Surgeon Should Know Stephen M Cohn, Peter Rhee, 2019-11-26 In 50 Landmark Papers every Acute Care Surgeon Should Know, editors Stephen Cohn and Peter Rhee have compiled a selection of the most influential recent contributions to the specialty of acute care surgery/emergency surgery. This book comprises 50 thought-provoking and relevant topics, reviewing carefully selected papers to update the readers on what has been published in the last decade. 50 key papers cover the most relevant studies from a wide range of topics from Acute Cholecystitis to Ventilator-Associated Pneumonia. This book is of interest to surgical residents and trainees, Trauma and Surgical Critical Care fellows and all members of the Acute Care team. This is both an informative and personal look at evidence-based topics, and is relevant to all general and acute care surgeons. About the Editors Stephen M. Cohn, MD FACS Hackensack Meridian School of Medicine at Seton Hall University Nutley, New Jersey, USA Peter Rhee New York Medical College Westchester Medical Center Valhalla, New York, USA

Reducing Mortality in Critically Ill Patients Giovanni Landoni, Martina Baiardo Redaelli, Chiara Sartini, Alberto Zangrillo, Rinaldo Bellomo, 2021-06-08 The 2nd edition of this book describes the recent techniques, strategies, and drugs that have been demonstrated by multicenter randomized trials to influence survival in critically ill, defined as those who have acute failure of at least one organ, due to either a pathological condition or a medical intervention, and require intensive care treatment. Each chapter focuses on a specific procedure, device, or drug. The scope is accordingly wide, with coverage of topics as diverse as noninvasive mechanical ventilation, protective ventilation, prone positioning, intravenous salbutamol in ARDS, high-frequency oscillatory ventilation, mild hypothermia after cardiac arrest, daily interruption of sedatives, tranexamic acid, diaspirin cross-linked hemoglobin, albumin, growth hormone, glutamine supplementation, tight glucose control, supranormal oxygen delivery, and hydroxyethyl starch in sepsis. The topics selection was performed with the help of hundreds of specialists from dozens of countries; they expressed via web if they agreed or not with these topics and if they used them in their daily clinical practice. The clear text is supported by how to do sections and key point boxes that provide easily accessible practical information. Written by acknowledged international experts, Reducing Mortality in Critically Ill Patients is of interest for a wide variety of specialists, including intensivists, emergency doctors, and anesthesiologists.

Civetta, Taylor, & Kirby's Critical Care Andrea Gabrielli, A. Joseph Layon, Mihae Yu, Joseph M. Civetta, Robert Wesley Taylor, Robert R. Kirby, 2009 Now in its fourth edition, this leading critical care textbook contains more than 30 new chapters and completely updated information. The book addresses every problem encountered in the intensive care unit and covers surgical critical care more thoroughly than any other text.

The Trauma Manual Andrew B. Peitzman, Michael Rhodes, C. William Schwab, 2008 The thoroughly updated Third

Edition of this popular and widely used pocket reference guides the trauma team through every aspect of patient care after injury and before, during, and after acute care surgery—from prehospital care, to resuscitation, treatment of specific organ injuries, priorities in intensive care, and management of special situations. Designed for rapid, on-the-spot information retrieval, this manual will be a staple reference in emergency departments and trauma centers. Flow charts, algorithms, sequential lists, and tables throughout facilitate quick clinical decision-making. More than 200 illustrations demonstrate specific injuries and procedures. Appendices include organ injury scales, tetanus prophylaxis recommendations, and frequently used forms.

Training in Minimal Access Surgery Nader Francis, Abe Fingerhut, Roberto Bergamaschi, Roger Motson, 2015-08-11 This book provides a broad overview on training in Minimal Access Surgery, with expert opinions from leaders in the field clarifying the definitions and terminology related to competence and accreditation. It also provides expert advice on how to set up a training unit and explores the role and impact of all types of simulations on training including virtual reality simulation. How to design a competency-based training curriculum in advanced laparoscopic surgery is also explored along with in depth examination of the role of assessment and competency based accreditation. *Training in Minimal Access Surgery* is a valuable resource for all health care professionals who are involved in training and education in Minimal Access Surgery including trainers and supervisors. There is well established and robust evidence to support the benefits of laparoscopic surgery in terms of better pain control, fewer complications and shorter length of stay with an earlier return to work. Hence, there is now widespread adoption of laparoscopic techniques in many surgical specialties including colorectal and morbid obesity surgery across the world.

It is a comprehensive introduction to nursing research that will allow readers to build up their understanding of the research process and develop confidence in its practical application. - Text supported by examples from 'real life' research - International perspective on nursing research - Comprehensive coverage including established and innovative designs and methods

Epilepsy Jerome Engel, Timothy A. Pedley, Jean Aicardi, 2008 Written and edited by world-renowned authorities, this three-volume work is, to quote a reviewer, the definitive textbook about seizures and epilepsy. This Second Edition is thoroughly updated and gives you a complete print and multimedia package: the three-volume set plus access to an integrated content Website. More than 300 chapters cover the spectrum of biology, physiology, and clinical information, from molecular biology to public health concerns in developing countries. Included are detailed discussions of seizure types and epilepsy syndromes; relationships between physiology and clinical events; psychiatric and medical comorbidity; conditions that could be mistaken for epilepsy; and an increasing range of pharmacologic, surgical, and alternative therapies, including vagus nerve stimulation and deep brain stimulation. This edition describes many new antiepileptic drugs, major advances in surgical treatment, and state-of-the-art neuroimaging, EEG, and other technologies for diagnosis and seizure prediction. A companion Website offers instant access to the complete, fully searchable text, plus an image bank of additional figures, video footage, and annual updates to selected chapters.

Cancer Pain Eduardo D. Bruera, Russell K. Portenoy, 2010 This is the second edition of the widely praised book by Drs Eduardo D. Bruera and Russell K. Portenoy on all aspects of cancer pain.
