Brian Scaddan's guides to the IEE Wiring Regulations have established themselves as an industry standard, so this new edition will be welcomed by anyone who wants to know more about the new issue of the Wiring Regs published on June 1st 2001, and mandatory from 1st January 2001. This book is essential reading for anyone with practical or management responsibility for testing and inspecting electrical installations. It is designed specifically to meet the requirements of the City & Guilds 2391 course, of which Brian Scaddan is the Chief Examiner. The 2391 is the next step for anyone with a 2380 qualification, advancing technical knowledge without the supervisory emphasis of the 2400. The text is supported by a sample test paper, complete with model answers and mark scheme. Brian Scaddan is a Leading Scheme Assessor, Examiner and Honorary Member of City and Guilds. He has 22 years' experience in Further Education, and is now Director of Brian Scaddan Associates, Engineering Training Consultants. IEE Wiring Regulations BS7261: 2001, Requirements for Electrical Installations Changes and additions include:

- Updated section on scope and fundamental principles
- Protection against overvoltages due to atmospheric conditions or switching
- Precautions where particular fire risks exist
- Update on construction site installations
- Locations containing a bath or shower
- Extended information on circuit breakers and RCBOs
- Introduction of continuous monitoring and maintenance of

electrical installations

Handbook of Electrical Installation Practice covers all key aspects of industrial, commercial and domestic installations and draws on the expertise of a wide range of industrial experts. Chapters are devoted to topics such as wiring cables, mains and submains cables and distribution in buildings, as well as power supplies, transformers, switchgear, and electricity on construction sites. Standards and codes of practice, as well as safety, are also included. Since the Third Edition was published, there have been many developments in technology and standards. The revolution in electronic microtechnology has made it possible to introduce more complex technologies in protective equipment and control systems, and these have been addressed in the new edition. Developments in lighting design continue, and extra-low voltage luminaires for display and feature illumination are now dealt with, as is the important subject of security lighting. All chapters have been amended to take account of revisions to British and other standards, following the trend to harmonised European and international standards, and they also take account of the latest edition of the Wiring Regulations. This new edition will provide an invaluable reference for consulting engineers, electrical contractors and factory plant engineers.

This book covers all the basics of inspection and testing and clearly explains all the legal requirements. It not only tells you what tests are needed but also describes all of them step-by-step with the help of colour photos. Sample forms show how to verify

recorded test results and how to certify and fill in the required documentation. The book is also packed with handy advice on how to avoid and solve common problems encountered on the job. With its focus on the practical side of the actual inspection and testing rather than just the requirements of the regulations, this book is ideal for students, experienced electricians and those working in allied industries, such as plumbers and heating specialists, kitchen and bathroom fitters, alarm installers and others, whether they are working on domestic or industrial installations. All the theory required for passing the City & Guilds Level 3 Certificate in Inspection, Testing and Certification of Electrical Installations (2391-01) is covered. The book also includes sample questions and scenarios as encountered in the exams. Questions encourage readers to research answers in the On-Site Guide, as required in the exams for Part P Competent Person courses from EAL, NICEIC, NAPIT, BPEC and others. Model answers are provided for all questions. The book will also help prepare students on City & Guilds 2330 Level 3 courses, NVQs and apprenticeship programmes for their practical inspection and testing exams. Chris Kitcher is an Electrical Installation lecturer at Central Sussex College and has 45 years of experience in the electrical industry. This popular guide provides an understanding of basic design criteria and calculations, along with current inspection and testing requirements and explains how to meet the requirements of the IEE Wiring Regulations. The book explains in clear language those parts of the regulations that most need simplifying. There are common misconceptions

regarding bonding, voltages, disconnection times and sizes of earthing conductors. This book clarifies the requirements and outlines the correct procedures to follow. It is an affordable reference for all electrical contractors, technicians and other workers involved in designing and testing electrical installations. It will answer queries quickly and help ensure work complies with the latest version of the Wiring Regulations. With the coverage carefully matched to the syllabus of the City & Guilds Certificate in Design, Erection and Verification of Electrical Installations (2391-20) and containing sample exam questions and answers, it is also an ideal revision guide. Brian Scaddan, I Eng, MIET, is a consultant for and an Honorary Member of City & Guilds. He has over 35 years' experience in Further Education and training. He is Director of Brian Scaddan Associates Ltd, an approved City and Guilds and NICEIC training centre offering courses on all aspects of Electrical Installation Contracting including the C&G 2391 series. He is also a leading author of books on electrical installation.

The IET Wiring Regulations are of interest to all those concerned with the design, installation and maintenance of electric wiring in buildings. The market includes electricians, electrical contractors, consultants, local authorities, surveyors and architects. This book will also be of interest to professional engineers, as well as students at university and further education colleges. All users of the IET Wiring Regulations need to be aware of the coming changes in the 18th Edition (BS 7671:2018). This is intended to come into effect on 1st January 2019, although industry

needs to start preparing for this from its point of publication (2nd July 2018). The Institution issues a series of Guidance Notes, each of which enlarges upon and amplifies the particular requirements of a part of the 17th Edition Wiring Regulations. Each of these guides is extensively cross-referenced to the Regulations, thus providing convenient and ready access. Some Guidance Notes contain information not included in the 17th Edition but which was included in earlier editions of the IEE Wiring Regulations. All of the Guidance Notes contain references to other relevant sources of information. Guidance Note 3 is suitable for the City & Guilds 2391 Certificate in Inspection, Testing and Certification, this guidance note is concerned principally with Inspection and Testing. It has been updated to align with the IEE Wiring Regulations (BS 7671) 17th Edition. It includes detailed coverage of initial verification, periodic inspection and test instruments.

This textbook covers all the material you need to pass the first part of the new City & Guilds 2357 Diploma in Electrotechnical Technology. Aligned with the 17th edition IEE Wiring Regulations, this new edition has been thoroughly updated to cover the 'performance' section of the latest 2357 course. Written in an accessible style and with a separate chapter for each unit, this book helps you to master each topic before moving on to the next. End of chapter revision questions help you to check your understanding and consolidate the key concepts learned in each chapter. With associated online animations and instructional videos to further support your learning,

Continuously in print since 1952, *Modern Wiring Practice* has now been fully revised to provide an up-to-date source of reference to building services design and installation in the 21st century. This compact and practical guide addresses wiring systems design and electrical installation together in one volume, creating a comprehensive overview of the whole process for contractors and architects, as well as electricians and other installation engineers. Best practice is incorporated throughout, combining theory and practice with clear and accessible explanation, all within the framework of the Wiring Regulations. Introducing the fundamentals of design and installation with a minimum of mathematics, this book is also relevant reading for all students of electrical installation courses, such as the 2330 Certificate in Electrotechnical Technology, and NVQs from City & Guilds (including 2356, 2391 and 2382 awards), as well as trainees in industry undertaking Apprenticeships and Advanced Apprenticeships. Previous ed.: published as 16th edition IEE wiring regulations. 2005.

This well established handbook, written and sponsored by the Electrical Contractors' Association and Select (formerly the Electrical Contractors' Association of Scotland), provides a detailed, authoritative guide to the Wiring Regulations, BS 7671: Requirements for Electrical Installations. As the regulations are not drafted by topic, the handbook will be particularly useful in guiding designers, installers, inspectors and testers round the various requirements. It gives practical guidance on how to approach new installations, extensions to existing installations, and the more extensive testing and inspection

which are required. The handbook has been revised to take account of amendments introduced by BS 7671:2001 effective from 1 January 2002. The most significant changes are:

- chapter 13 rewritten to include three sections on protection for safety, design and selection of electrical equipment
- a new chapter 44 on overvoltage protection
- a new chapter 48 on high fire risk situations
- revisions to the requirements on rooms containing a bath or shower
- new earthing requirements for the installation of equipment with high protective conductor outlets

This book has for many years been the standard guide to the practical aspects of domestic electrical wiring. It explains step-by-step what needs to be done so that work can be carried out safely and correctly first time. The thirteenth edition has been fully updated in line with the 17th Edition Wiring Regulations and latest best practice. It is essential reading for anyone obtaining a Domestic Installer Scheme Qualification which relates to Part P of the Building Regulations. The handy format and clear, straightforward text have also made this book popular as a quick guide to best practice for electricians. Although it is not intended as a DIY manual, non-qualified persons will also find the book useful before calling in qualified operatives.
