The main driver of inequality—returns on capital that exceed the rate of economic growth—is again threatening to generate extreme discontent and undermine democratic values. Thomas Piketty's findings in this ambitious, original, rigorous work will transform debate and set the agenda for the next generation of thought about wealth and inequality.

'Teaching economics is the most important job that economists do. Thus it is nice to see a book devoted to teaching written by two economists who have played an important role in advancing the teaching of economics throughout the profession.' - David Colander, Journal of Economic Methodology

This book is an introduction to health economics and finance for lower income countries, which is easy to use and does not assume previous training in economics. It explains health economics in an accessible applied way using material from, and relevant to, developing countries. The focus is on practical use. Core areas are selected for health economists to study in detail, with brief discussions and suggestions for further reading of linked topics more commonly studied under other related disciplines, such as public health and health management. Each chapter introduces a topic then, by the use of question and answer sessions between a group of (humorously named) characters in a fictional country, the relevant material is covered in a lively way. The chapter ends with a summary, practice experiences for the reader and a list of references and suggestions for further reading. There is a glossary of health economic terms to help the reader. The authors are experienced teachers and consultants in economic health economics, based at the Centre for Health Economics at the University of York. All four teach short courses on health economics for students from developing countries.

With over a million copies sold, Economics in One Lesson is an essential guide to the basics of economic theory. A fundamental influence on modern libertarianism, Hazlitt defends capitalism and the free market from economic myths that persist to this day. Considered among the leading economic thinkers of the "Austrian School," which includes Carl Menger, Ludwig von Mises, Friedrich (F.A.) Hayek, and others, Henry Hazlitt (1894-1993), was a libertarian philosopher, an economist, and a journalist. He was the founding vice-president of the Foundation for Economic Education and an early editor of The Freeman magazine, an influential libertarian publication. Hazlitt wrote Economics in One Lesson, his seminal work, in 1946. Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to dissemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of Economics in One Lesson. Hazlitt's focus on non-governmental solutions, strong — and strongly reasoned — anti-deficit position, and general emphasis on free markets, economic liberty of individuals, and the dangers of government intervention make Economics in One Lesson every bit as relevant and valuable today as it has been since publication.

Combining a global approach with examples from everyday life, this work describes the lives of two children who live very different lives in different parts of the world: in the Mid-West USA and in Ethiopia. Along the way, it provides an introduction to key economic factors and concepts such as individual choices, national policies, and equity.

Interest in power systems economics is gaining momentum with the recent power supply shortages in America and the rising cost of fossil fuels. The involvement of independent power generators, brokers and distributors has changed the way in which power systems operate. Kirschen and Strbac use a combination of traditional engineering techniques and fundamental economics to address the long-term problems of power system development in a competitive environment. Power system engineers, operators, planners and policy makers working in the deregulated environment will value this practical guide, also of great interest to postgraduate and advanced undergraduate students in electrical and power engineering. Outlines the principles of competitive electricity markets alongside the operation and development of the supporting transmission and distribution networks Applies basic economic principles to power system operating and planning Written by recognised experts in the field For further information and to register for the solutions manual visit: <http://www.wiley.com/go/powersystemeconomics>

Workbook in Introductory Economics, Third Edition, is designed to help readers learn and use economics, to aid in testing their level of understanding, and to improve their skills in answering multiple-choice and data-response questions. This workbook, unlike many others, is not written to ""accompany"" a particular text, but to be suitable for use with the standard ones on the market. The book begins with discussion of the subject of economics. This is followed by separate chapters on concepts such as supply and demand; production and distribution; national income; money, banking, and prices; international trade; and economic policy. Each chapter is divided into four main sections—textual summaries of the ground covered, questions and problems in economic analysis, questions and exercises on the U.K. economy, and essays. The book also includes a Reading Guide, which lists the major British standard general textbooks at an introductory level as well as one or two of the best-known American and a small number in special fields.

What is economics? What can - and can't - it explain about the world? Why does it matter? Ha-Joon Chang teaches economics at Cambridge University, and writes a column for the Guardian. The Observer called his book 23 Things They Don't Tell You About Capitalism, which was a no.1 bestseller, 'a witty and timely debunking of some of the biggest myths surrounding the global economy.' He won the Wassily Leontief Prize for advancing the frontiers of economic thought, and is a vocal critic of the failures of our current economic system.

Applies traditional economic theory to contemporary problems such as unemployment, inflation, and conflicting economic systems.
