medicinal plants. Consequently they are of considerable importance in the horticultural trade and for their commercial value. Aloes: The definitive guide is a comprehensive account of all known aloes. For the first time since the publication of G.W. Reynolds' two books over 40 years ago, all currently accepted Aloe taxa are brought together, with descriptions, illustrations, reference topologies, location of types, distribution, habitat, and brief notes on diagnostic features and relationships. Dichotomous keys lead to identification of all taxa arranged in 10 groups based on habit and size, from small to large. An extensive, illustrated chapter on the history of discovery, especially in tropical Africa, adds interest. The text includes a pictorial glossary, bibliography, and index with synonyms. A must-have reference for succulent plant enthusiasts, hobbyists, nurserymen, CITES agencies, research workers and libraries, and botanists.

Our world is being revolutionized by data-driven methods: access to large amounts of data has generated new insights and opened exciting new opportunities in commerce, science, and computing applications.

Processing the enormous quantities of data necessary for these advances requires large clusters, making distributed computing paradigms more crucial than ever. MapReduce is a programming model for expressing distributed computations on massive datasets and an execution framework for large-scale data processing on clusters of commodity servers. The programming model provides an easy-to-understand abstraction for designing scalable algorithms, while the execution framework transparently handles many system-level details, ranging from scheduling to synchronization to fault tolerance.

This book focuses on MapReduce algorithm design, with an emphasis on text processing algorithms common in natural language processing, information retrieval, and machine learning. We introduce the notion of MapReduce design patterns, which represent general reusable solutions to commonly occurring problems across a variety of problem domains. This book not only intends to help the reader "think in MapReduce", but also discusses limitations of the programming model as well. This volume is a printed version of a work that appears in
