Di chiara matrice trattatistica, questo testo cerca di assolvere all'esigenza di comprendere i raccordi neurofisiologici, biomeccanici e, non per ultimo, patologici che caratterizzano quello stato di alterazione funzionale meglio noto come "mal di schiena". L'esposizione delle nozioni è stata organizzata così da rendere agevole la comprensione dei temi trattati pur senza sacrificare una progressiva ed adeguata conoscenza dei meccanismi con cui la situazione organismica si sposta da una condizione di equilibrio fisiologico (stato di benessere) ad una di squilibrio più o meno grave (stato di malattia). Lo studio semiotico torna ad essere un momento cruciale per la definizione di una corretta diagnosi clinica, indispensabile nei processi di organizzazione e gestione di un idoneo, specifico e differenziale intervento terapeutico. Il volume si costituisce di 2 sezioni (della teoria, della pratica) e 17 capitoli (le matrici dottrinali, caratteristiche morfo-funzionali del rachide, cenni di biomeccanica, le dinamiche corporee, la fascia corporis, i carichi agenti, la conduzione delle informazioni, la via del dolore, le cause di interferenza nella conduzione delle informazioni, il metodo scientifico, la clinica, l'approccio concettuale alla normalizzazione, la normalizzazione del tessuto fasciale, la normalizzazione del tessuto muscolare, la normalizzazione delle giunture articolari, la normalizzazione del tessuto nervoso), completato da un'iconografia di oltre 100 immagini
