Percy Bysshe Shelley joined the deluge of sightseers that poured onto the Continent after Napoleon's defeat in 1814, and over the next eight years Shelley followed major travelling trends, visiting Switzerland in 1816 and Italy from 1818. Shelley's Eye is the first study to address Shelley's participation in the travel culture of Post-Napoleonic Europe, and the first to consider Shelley as an important travel writer in his own right. This book is informed by original research on a wide range of period travel writings, including Mary Shelley and Shelley's neglected collaboration, History of a Six Weeks' Tour (1817), in which 'Mont Blanc' first appeared. Fully responsive to the culture of travel, Shelley's travel prose and poetry form fascinating conversations with major Romantic travellers like Byron, Wollstonecraft, and Wordsworth, as well as lesser-known but widely read travel writers of the day, including Morris Birkbeck, Charlotte Eaton, and John Chetwode Eustace. In this provocative study, Benjamin Colbert demonstrates how the Grand Tour remains a vital cultural metaphor for Shelley and his contemporaries, under pressure from mass travel and popular culture. Shelley's travel prose and 'visionary' poetry explore motives of perception underlying travel discourse and posit an authentic 'aesthetic vision' that reconfigures social, historical, and political meanings of 'sights' from the perspective of an ideal tourist-observer. Shelley's Eye offers a new perspective on Shelley's intellectual history. It is also a timely and important contribution to recent interdisciplinary scholarship that aims to re-evaluate Romantic idealism in the context of physical, experiential, or material cultural practices.

Ranging widely over biology, evolutionary psychology, physiology, and neuroscience, "The Tending Instinct" examines the biological imperative that drives women to seek each other's company and to tend to the young and the infirm, bestowing great benefits to the group but often at great cost to themselves.

Introducing original methods for integrating sociocultural and discourse studies into science and engineering education, this book provides a much-needed framework for how to conduct qualitative research in this field. The three dimensions of learning identified in the Next Generation Science Standards (NGSS) create a need for research methods that examine the sociocultural components of science education. With cutting-edge studies and examples consistent with the NGSS, this book offers comprehensive research methods for integrating discourse and sociocultural practices in science and engineering education and provides key tools for applying this framework for students, pre-service teachers, scholars, and researchers.

For the past years, more emphasis has been given in understanding the level of cultural adjustment that individuals face on migrating to a new country. Not much attention has been given on studying repatriates. This phenomenological study deals with the experiences of 17 Indian repatriates, their emotional challenges and the various coping strategies that they had to employ in order to smoothen their repatriation process on returning to their home country. Six main themes were identified on applying thematic analysis to the individual semi-structured interviews: relief from hardships faced in the host country, stronger bond with the home country, feeling of being an alien in your home country, dynamic factors upon repatriation, emotive encounters and coming to terms with chaos associated with repatriation. Findings from the study, shows that the repatriates had faced many emotional challenges such as feeling of alienation, difficulty in adjusting to the old culture and getting a job, adjusting to the new work settings, grief on leaving the host country, idleness and laziness felt on repatriation, societal and familial pressure and financial struggles. Financial security, positive adjustment to the new work settings and the new income scale, lessons learned from the hostile experiences faced while abroad, pre-arrangements done in the home country before repatriating and reintegrating host culture into home culture served as an effective coping strategy, which eventually helped them in their successful repatriation over time.

A large body of research has established a causal relationship between experiences of racial discrimination and adverse effects on mental and physical health. In Measuring the Effects of Racism, Robert T. Carter and Alex L. Pieterse offer a manual for mental health professionals on how to understand, assess, and treat the effects of racism as a psychological injury. Carter and Pieterse provide guidance on how to recognize the psychological effects of racism and racial discrimination. They propose an approach to understanding racism that connects particular experiences and incidents with a person's individual psychological and emotional response. They detail how to evaluate the specific effects of race-based encounters that produce psychological distress and possibly impairment or trauma. Carter and Pieterse outline therapeutic interventions for use with individuals and groups who have experienced racial trauma, and they draw attention to the importance of racial awareness for practitioners. The book features a racial-trauma assessment toolkit, including a race-based traumatic-stress symptoms scale and interview schedule. Useful for both scholars and practitioners, including social workers, educators, and counselors, Measuring the Effects of Racism offers a new framework of race-based traumatic stress that helps legitimize psychological reactions to experiences of racism.

"When I wrote the first edition of Health Psychology over 30 years ago, the task was much simpler than it is now. Health psychology was a new field and was relatively small. In recent decades, the field has grown steadily, and great research advances have been made. Chief among these developments has been the use and refinement of the biopsychosocial model: the study of health issues from the standpoint of biological, psychological, and social factors acting together. Increasingly, research has attempted to identify the biological pathways by which psychosocial factors such as stress may adversely affect health and potentially protective factors such as social support may buffer the impact of stress. My goal in the tenth edition of this text is to convey this increasing sophistication of the field in a manner that makes it accessible, comprehensible, and exciting to undergraduates"--

In Victor Frankenstein, the Monster and the Shadows of Technology: The Frankenstein Prophecies, Romanyshyn asks eight questions that uncover how Mary Shelley's classic work Frankenstein haunts our world. Providing a uniquely interdisciplinary assessment, Romanyshyn combines Jungian theory, literary criticism and mythology to explore answers to the query at the heart of this book: who is the monster? In the first six questions, Romanyshyn explores how Victor's story and the Monster's tale linger today as the dark side of Frankenstein's quest to create a new species that would bless him as its creator. Victor and the Monster are present in the guises of climate crises, the genocides of our "god wars," the swelling worldwide population of refugees, the loss of place in digital space, the Western obsession with eternal youth and the eclipse of the biological body in genetic and computer technologies that are redefining what it means to be human. In the book's final two questions, Romanyshyn uncovers some seeds of hope in Mary Shelley's work and explores how the Monster's tale reframes her story as a love story. This important book will be essential reading for academics and students of Jungian and post-Jungian theory, literature, philosophy and psychology, psychotherapists in practice and in training, and for all who are concerned with the political, social and cultural crises we face today.

This book addresses the intersections between the interdisciplinary realms of Ecocriticism and Indigenous and Native American Studies, and between academic theory and pragmatic eco-activism conducted by multiethnic and indigenous communities. It illuminates the multi-layered, polyvocal ways in which artistic expressions render ecological connections, drawing on scholars working in collaboration with Indigenous artists from all walks of life, including film, literature, performance, and other forms of multimedia to expand existing conversations. Both local and global in its focus, the volume includes essays from multiethnic and Indigenous communities across the world, visiting topics such as Navajo opera, Sami film production history, south Indian tribal documentary, Maori art installations, Native American and First Nations science-fiction literature and film, Amazonian poetry, and many others. Highlighting trans-Indigenous sensibilities that speak to worldwide crises of environmental politics and action against marginalization, the collection alerts readers to movements of community resilience and resistance, cosmological thinking about inter- and intra-generational multi-species relations, and understandings of indigenous aesthetics and material ecologies. It engages with emerging environmental concepts such as multispecies ethnography, cosmopolitics, and trans-indigeneity, as well as with new areas of ecocritical research such as material ecocriticism, biosemiotics, and media studies. In its breadth and scope, this book promises new directions for ecocritical thought and environmental humanities practice, providing thought-provoking insight into what it means to be human in a locally situated, globally networked, and cosmologically complex world.

Since Dr. Brizendine wrote *The Female Brain* ten years ago, the response has been overwhelming. This New York Times bestseller has been translated into more than thirty languages, has sold nearly a million copies between editions, and has most recently inspired a romantic comedy starring Whitney Cummings and Sofia Vergara. And its profound scientific understanding of the nature and experience of the female brain continues to guide women as they pass through life stages, to help men better understand the girls and women in their lives, and to illuminate the delicate emotional machinery of a love relationship. Why are women more verbal than men? Why do women remember details of fights that men can't remember at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine, M.D., brings together the latest findings to show how the unique structure of the female brain determines how women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on neurology, psychology, and neurobiology focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In *The Female Brain*, Dr. Brizendine distills all her findings and the latest information from the scientific community in a highly accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy.

Ecocriticism and the Idea of Culture: Biology and the Bildungsroman draws on work by Kinji Imanishi, Frans de Waal, and other biologists to create an interdisciplinary, materialist notion of culture for ecocritical analysis. In this timely intervention, Feder examines the humanist idea of culture by taking a fresh look at the stories it explicitly tells about itself. These stories fall into the genre of the Bildungsroman, the tale of individual acculturation that participates in the myth of its complete separation from and opposition to nature which, Feder argues, is culture's own origin story. Moving from Voltaire's *Candide* to Mary Shelley's *Frankenstein* and from Virginia Woolf's *Orlando* to Jamaica Kincaid's *Lucy*, the book dramatizes humanism's own awareness of the fallacy of this foundational binary. In the final chapters, Feder examines the discourse of animality at work in this narrative as a humanist fantasy about empathy, one that paradoxically excludes other animals from the ethical community to justify the continued domination of both human and nonhuman others.

Scientists Making a Difference is a fascinating collection of first-person narratives from the top psychological scientists of the modern era. These readable essays highlight the most important contributions to theory and research in psychological science, show how the greatest psychological scientists formulate and think about their work, and illustrate how their ideas develop over time. In particular, the authors address what they consider their most important scientific contribution, how they got the idea, how the idea matters for the world beyond academic psychology, and what they would like to see as the next steps in research. The contributors, who were chosen from an objectively compiled list of the most eminent psychological scientists, provide a broad range of insightful perspectives. This book is essential reading for students, researchers and professionals interested in learning about the development of the biggest ideas in modern psychological science, described firsthand by the scientists themselves.

NATIONAL BOOK CRITICS CIRCLE AWARD WINNER • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY THE SEATTLE TIMES This groundbreaking dual biography brings to life a pioneering English feminist and the daughter she never knew. Mary Wollstonecraft and Mary Shelley have each been the subject of numerous biographies, yet no one has ever examined their lives in one book—until now. In *Romantic Outlaws*, Charlotte Gordon reunites the trailblazing author who wrote *A Vindication of the Rights of Woman* and the Romantic visionary who gave the world *Frankenstein*—two courageous women who should have shared their lives, but instead shared a powerful literary and feminist legacy. In 1797, less than two weeks after giving birth to her second daughter, Mary Wollstonecraft died, and a remarkable life spent pushing against the boundaries of society's expectations for women came to an end. But another was just beginning. Wollstonecraft's daughter Mary was to follow a similarly audacious path. Both women had passionate relationships with several men, bore children out of wedlock, and chose to live in exile outside their native country. Each in her own time fought against the injustices women faced and wrote books that changed literary history. The private lives of both Marys were nothing less than the stuff of great Romantic drama, providing fabulous material for Charlotte Gordon, an accomplished historian and a gifted storyteller. Taking readers on a vivid journey across revolutionary France and Victorian England, she seamlessly interweaves the lives of her two protagonists in alternating chapters, creating a book that reads like a richly textured historical novel. Gordon also paints unforgettable portraits of the men in their lives, including the mercurial genius Percy Shelley, the unbridled libertine Lord Byron, and the brilliant radical William Godwin. "Brave, passionate, and visionary, they broke almost every rule there was to break," Gordon writes of Wollstonecraft and Shelley. A truly revelatory biography, *Romantic Outlaws* reveals the defiant, creative lives of this daring mother-daughter pair who refused to be confined by the rigid conventions of their era. Praise for *Romantic Outlaws* "[An] impassioned dual biography . . . Gordon, alternating between the two chapter by chapter, binds their lives into a fascinating whole. She shows, in vivid detail, how mother influenced daughter, and how the daughter's struggles mirrored the mother's."—*The Boston Globe*

"Polished, clear, insightful, and meaningful.... This volume amounts to nothing less than a complete rethinking of what progressive education can be at its best and how education can be reconceptualized as one of the central practices of a genuinely democratic and sustainable society.... It is the kind of book that has the potential to be transformative."

Stephen Preskill, University of New Mexico "The editors and contributors are pioneers in the field of educational theory, policy, and philosophy.... They are opening new areas of inquiry and educational reform in ways that promise to make this book in very short time into a classic.... The practical applications and experiments included reveal the richness of grassroots initiatives already underway to bring educational theory and policy down to earth. While spanning the richest and deepest intellectual ideas and concepts, the stories told are the types that practitioners and teachers will be able to relate to in their daily undertakings." Madhu Suri Prakash, The Pennsylvania State University This volume – a landmark contribution to the burgeoning theory and practice of place-based education – enriches the field in three ways: First, it frames place-based pedagogy not just as an alternative teaching methodology or novel approach to environmental education but as part of a broader social movement known as the "Anew localism", which aims toward reclaiming the significance of the local in the global age. Second, it links the development of ecological awareness and stewardship to concerns about equity and cultural diversity. Third, it presents examples of place-based education in action. The relationship between the new localism and place-based education is clarified and the process of making connections between learners and their wider communities is demonstrated. The book is organized around three themes: Reclaiming Broader Meanings of Education; Models for Place-Based Learning; and Global Visions of the Local in Higher Education This is a powerfully relevant volume for researchers, teacher educators, and students across the fields of curriculum theory, educational foundations, critical pedagogy, multicultural education, and environmental education.

Couples on the Couch provides a clear guide to applying the Tavistock model of couple psychotherapy in clinical psychoanalytic practice, offering a compelling sampling of ideas about couple relationships and couple psychotherapy from a broadly relational psychoanalytic perspective. The book provides an in-depth perspective to understanding intimate relationships and the complexities of working in this domain. The chapters and their accompanying discussion also offer a fertile resource of material for readers who have not previously had exposure to the theory and technique of psychoanalytic psychotherapy, as well as offering an expanded and more rigorous approach to those who are already familiar with the Tavistock model. The chapters cover key topics including: unconscious beliefs, forms of couple relating, sex and aging and draw upon the work of Klein, Winnicott and Bion, as well as attachment and object relations theory. The majority of the contributors are affiliated with the Tavistock Centre for Couple Relations (TCCR) in London or The Psychoanalytic Couple Psychotherapy Group in Berkeley, California and make fundamental use of the theoretical model that has been developed at TCCR since the 1940's. Couples on the Couch provides an introduction to the TCCR approach to couple psychotherapy and exposure to the depth and breadth of this framework. Each of the chapters contain in-depth theoretical and clinical case material, presented in tandem with formal discussion, demonstrating how theory may be applied in a variety of clinical encounters and by doing so, deepening the theoretical understanding of the difficulties that beset couples and the challenges posed to those who work with them. The book provides an in-depth perspective to understanding intimate relationships and the complexities of working in this domain. Couples on the Couch will be of great interest to couple psychotherapists and counselors, marriage and family therapists, psychoanalysts, as well as graduate and postgraduate students in psychology, marriage and family therapy, or those in psychoanalytic training programs.

Every day we are asked to fulfil others' requests, and we make regular requests of others too, seeking compliance with our desires, commands and suggestions. This accessible text provides a uniquely in-depth overview of the different social influence techniques people use in order to improve the chances of their requests being fulfilled. It both describes each of the techniques in question and explores the research behind them, considering questions such as: How do we know that they work? Under what conditions are they more or less likely to be effective? How might individuals successfully resist attempts by others to influence them? The book groups social influence techniques according to a common characteristic: for instance, early chapters describe "sequential" techniques, and techniques involving egotistic mechanisms, such as using the name of one's interlocutor. Later chapters present techniques based on gestures and facial movements, and others based on the use of specific words, re-examining on the way whether "please" really is a magic word. In every case, author Dariusz Dolinski discusses the existing experimental studies exploring their

effectiveness, and how that effectiveness is enhanced or reduced under certain conditions. The book draws on historical material as well as the most up-to-date research, and unpicks the methodological and theoretical controversies involved. The ideal introduction for psychology graduates and undergraduates studying social influence and persuasion, *Techniques of Social Influence* will also appeal to scholars and students in neighbouring disciplines, as well as interested marketing professionals and practitioners in related fields.
