Image Restoration Bahadir Kursat Gunturk, Xin Li, 2018-09-03 Image Restoration: Fundamentals and Advances responds to the need to update most existing references on the subject, many of which were published decades ago. Providing a broad overview of image restoration, this book explores breakthroughs in related algorithm development and their role in supporting real-world applications associated with various scientific and engineering fields. These include astronomical imaging, photo editing, and medical imaging, to name just a few. The book examines how such advances can also lead to novel insights into the fundamental properties of image sources. Addressing the many advances in imaging, computing, and communications technologies, this reference strikes just the right balance of coverage between core fundamental principles and the latest developments in this area. Its content was designed based on the idea that the reproducibility of published works on algorithms makes it easier for researchers to build on each other's work, which often benefits the vitality of the technical community as a whole. For that reason, this book is as experimentally reproducible as possible. Topics covered include: Image denoising and deblurring Different image restoration methods and recent advances such as nonlocality and sparsity Blind restoration under space-varying blur Super-resolution restoration Learning-based methods Multi-spectral and color image restoration New possibilities using hybrid imaging systems Many existing references are scattered throughout the literature, and there is a significant gap between the cutting edge in image restoration and what we can learn from

standard image processing textbooks. To fill that need but avoid a rehash of the many fine existing books on this subject, this reference focuses on algorithms rather than theories or applications. Giving readers access to a large amount of downloadable source code, the book illustrates fundamental techniques, key ideas developed over the years, and the state of the art in image restoration. It is a valuable resource for readers at all levels of understanding.

Pattern Recognition Sergios Theodoridis, Konstantinos Koutroumbas, 2006-04-07 Pattern recognition is a fast growing area with applications in a widely diverse number of fields such as communications engineering, bioinformatics, data mining, content-based database retrieval, to name but a few. This new edition addresses and keeps pace with the most recent advancements in these and related areas. This new edition: a) covers Data Mining, which was not treated in the previous edition, and is integrated with existing material in the book, b) includes new results on Learning Theory and Support Vector Machines, that are at the forefront of today's research, with a lot of interest both in academia and in applications-oriented communities, c) for the first time treats audio along with image applications since in today's world the most advanced applications are treated in a unified way and d) the subject of classifier combinations is treated, since this is a hot topic currently of interest in the pattern recognition community. - The latest results on support vector machines including v-SVM's and their geometric interpretation - Classifier combinations including the Boosting approach - State-of-the-art material for clustering algorithms tailored for large data sets and/or high dimensional data, as required by applications such as web-mining and bioinformatics - Coverage of diverse applications such as image analysis, optical character recognition, channel equalization, speech recognition and audio classification

PRICAI 2004: Trends in Artificial Intelligence Chengqi Zhang, Hans W. Guesgen, Wai K. Yeap, 2004-09-21 The Pacific Rim International Conference on Artificial Intelligence (PRICAI) is a biennial international event which focuses on Artificial Intelligence (AI) theories and technologies, and their applications which are of social and economic importance for countries in the Pacific Rim region. Seven earlier conferences were held in: Nagoya, Japan (1990); Seoul, Korea (1992); Beijing, China (1994); Cairns, Australia (1996); Singapore (1998); Melbourne, Australia (2000); and Tokyo, Japan (2002). PRICAI 2004 was the eighth in the series and was held in Auckland, New Zealand in August 2004. PRICAI 2004 had attracted a historical record number of submissions, a total of 356 papers. After careful reviews by at least two international Program Committee members or referees, 94 papers were accepted as full papers (27%) and 54 papers (15%) were accepted as posters. Authors of accepted papers came from 27 countries. This volume of the proceedings contains all the 94 full papers but only a 2-page-tended abstract of each of the accepted posters. The full papers were categorized into four sections, namely: AI foundations, computational intelligence, AI technologies and systems, and AI specific application areas. Among the papers submitted, we found "Agent Technology" to be the area having the most papers submitted. This was followed by "Evolutionary Computing",

“Computational Learning”, and “Image Processing”.

The Rise and Fall of Modern Empires, Volume IV Martin Shipway, 2016-12-05 The collection of essays in this volume offers an overview of scholarly approaches to the ways in which diverse actors, representing the colonised or the colonising nations, or indeed the international community, reacted to colonialism during the lifetime of the modern colonial empires or in their aftermath. The coverage is broad in terms of geographical scope and historical period, with articles on the major colonial empires in Asia and Africa and the imperial centres of Paris, London and Berlin, from the conquests of the late nineteenth century to the period of decolonisation. The selection also reflects recent academic trends by focusing on countries whose colonial past and experience of decolonisation have been studied and debated with particular intensity, such as Algeria, Kenya and India. The volume draws on previously published articles and book chapters by leading international scholars writing in, or translated into, English and includes a critical introduction which situates each essay in relation to recent debates in this dynamic and expanding field of study.

Private Pictures Janina Struk, 2020-09-14
Snapshots taken by American soldiers of Iraqi prisoners stripped naked, humiliated and tortured shocked the world in 2004 and more have followed from the conflict in Afghanistan, but whether the public have been horrified by the soldiers' conduct or the fact they have taken pictures has not been clear. In fact, as this remarkable book reveals and relates, soldiers have taken photographs of war and its atrocities for more than 100 years. But their pictures are private, intended mainly for the soldiers themselves, as mementoes or as attempts to make sense of the chaos, brutality and boredom of war. They can be gruesome or sociable, shocking or mundane and they are seldom regarded as serious contributions to a visual culture of war, which since 1939 has been dominated by professional war photography. But with the 21st-century shift to simple digital photography, transmission by the internet available to all, and a new 'citizen journalism', soldiers' pictures are acquiring a new resonance. Private Pictures traces this unacknowledged genre of photography from the origins of popular photography in the Boer War through to the present day; it discusses how the images have been used and it asks: what effect might the wider appreciation of soldiers' pictures have on the popular perception of war?
