As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Most of the content in the Career Pathways Handbook is based on a series of career profiles - each one packed with four pages of valuable information, including the latest U.S. employment statistics and wage information, career dialogues with "real people" who work in the occupations, and extensive information for identifying and comparing related occupations. Each profile uses a consistent format to allow for easy reading and useful comparisons between occupations. While this book is based on a foundation of 154 different occupations, it also includes valuable information on several hundred occupations via the career path and related occupations tables. It is important to me that the information in this book will not only be useful to readers, but also be as current and reliable as possible. Therefore I have included the most recent information from reliable Government sources, as well as my own proprietary information from 20 years of extensive occupational research. The Government sources are U.S. Department of Labor (DOL) programs. For example, I have incorporated information from DOL's new O*NET Database, which includes the occupation titles and definitions, common job tasks, key skills and abilities, and related occupations. I have added the most recent employment statistics and wage information from DOL's Bureau of Labor Statistics. Finally, from our own research, I have added career path and "real people" career dialogue elements, and have enhanced and expanded the DOL information throughout. For example, the O*NET Related Occupations lists were significantly expanded and education/training information, along with growth and wage data, were added to make occupational comparisons more meaningful. The Job Tasks have been expanded to make them more useful. The education and training information is based on DOL's Typical Education Levels, but has also been expanded for this book. I have also written or rewritten many of the job outlook and analysis statements that are incorporated into the Employment Outlook sections. Finally, I have included a number of resource guides to help job seekers and career explorers reach their goals. Beginning on page 617, there are guides on Planning Your Career, Researching Occupations, Education & Training Options, Looking for a Job, Competing for a Job, Writing a Resume, Writing a Cover Letter, Completing the Application, Preparing for the Interview, and Common Interview Questions. There are countless numbers of books (both good and bad ones) on all of these subjects, so I've included a list of my favorite books on my website under Readers' Resources (see www.cassio.com). Also included on this website is an online guide to "State Training & Postsecondary Education Directories" and a list of my "Favorite Job Websites." Best regards, Jim Cassio www.cassio.com An absolutely essential career reference for finding comprehensive job information spanning a total of 150+ occupations. This is the all-inclusive guide to helping a job seeker go from planning a career to looking for a job. The career profiles offer extensive statistical research on employment and job skills for each career path. Highly recommended for all public and academic libraries. Regina Jimenez, Research Librarian, Folsom Lake College This book is a wonderful and powerful tool for guidance counselors and individuals who are looking to start, change, or enhance their careers. The Career Pathways Handbook provides useful and insightful job skills information in a clear and reasoned manner. The personal point-of-view provided by the career professionals in each career gives the user an inside perspective on making career decisions that is refreshing! Describes 250 occupations which cover approximately 107 million jobs.

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care. The nursing profession, is the largest health care occupation, with more than 2 million jobs. It is also one of the 10 occupations

projected to have the largest numbers of new jobs. Licensed Practical Nurse training lasts about one year and is available in about 1,100 State-approved programs, mostly in vocational or technical schools. Nursing homes are expected to offer the most new jobs. Job seekers in hospitals may face competition as the number of hospital jobs for LPNs declines. Job prospects for nursing and home health aides will also be very good because of fast growth and high replacement needs in these large occupations. Minimum education or training is generally required for entry-level jobs, but earnings are low. This book brings together a detailed description of the profession, including the educational requirements as well as what can be expected upon entering the profession. Present and future issues in the field as well are also examined and a selective bibliography is included on books and journals of particular interest to newcomers to the field.
