Champions, as the familiar adage preaches, are not born—they're made. Reaching the top of any sport, or any aspect of life, takes years upon years of dedication and proper preparation. But if there's a huge pool of individuals who have undertaken the same commitment and steps towards becoming the best, what truly separates the winners from everyone else? Joanna Zeiger believes proper mental preparation is the answer. The Champion Mindset is a much-needed and long overdue look into how to program a competitor's mind to achieve optimal success. Changing behaviors and ways of thinking are never easy, but the chapters in this book aim to simplify this process to make it manageable and achievable. This book is for every athlete—from the weekend warrior, who wants to complete in his or her first 5k running race, to those who have aspirations of one day becoming Olympians and world champions. The Champion Mindset is a compendium of Zeiger's own personal journey from struggling novice swimmer to Olympian and World Champion. Through steps including: Proper Goal Setting, Keeping it Fun, Building Your Team, Intention in Training, Improving Motivation, Promoting Self-

Confidence, and Mind/Body Cohesion, among others, Zeiger uses her decades of personal experience, doctoral-level research, and professional success, to prepare readers to go all-in with their mental game.

A New York Review Books Original Hav is like no place on earth. Rumored to be the site of Troy, captured during the crusades and recaptured by Saladin, visited by Tolstoy, Hitler, Grace Kelly, and Princess Diana, this Mediterranean city-state is home to several architectural marvels and an annual rooftop race that is a feat of athleticism and insanity. As Jan Morris guides us through the corridors and quarters of Hav, we hear the mingling of Italian, Russian, and Arabic in its markets, delight in its famous snow raspberries, and meet the denizens of its casinos and cafés. When Morris published *Last Letters from Hav* in 1985, it was short-listed for the Booker Prize. Here it is joined by *Hav of the Myrmidons*, a sequel that brings the story up-to-date. Twenty-first-century Hav is nearly unrecognizable. Sanitized and monetized, it is ruled by a group of fanatics who have rewritten its history to reflect their own blinkered view of the past. Morris's only novel is dazzlingly sui-generis, part erudite travel memoir, part speculative fiction, part cautionary political tale. It transports the reader to an extraordinary place that never was, but could well be.

The ever-increasing demands placed on combustion engines are just as great when it comes to this centerpiece-the piston. Achieving less weight or friction, or even greater wear resistance, requires in-depth knowledge of the processes

taking place inside the engine, suitable materials, and appropriate design and manufacturing processes for pistons, including the necessary testing measures. It is no longer possible for professionals in automotive engineering to manage without specific expertise of this kind, whether they work in the field of design, development, testing, or maintenance. This technical book answers these questions in detail and in a very clear and comprehensible way. In this second, revised edition, every chapter has been revised and expanded. The chapter on "Engine testing", for example, now include extensive results in the area of friction power loss measurement and lube oil consumption measurement. Contents
