

## Hospice Idt Documentation

The first text to explore the history, characteristics, and challenges of hospice social work, this volume weaves leading research into an underlying framework for practice and care. A longtime practitioner, Dona J. Reese describes the hospice social work role in assessment and intervention with individuals, families, groups, organizations, and the community, while honestly confronting the personal and professional difficulties of such life-changing work. She introduces a well-tested model of psychosocial and spiritual variables that predict hospice client outcomes, and she advances a social work assessment tool to document their occurrence. Operating at the center of national leaders' coordinated efforts to develop and advance professional organizations and guidelines for end-of-life care, Reese reaches out with support and practice information, helping social workers understand their significance in treating the whole person, contributing to the cultural competence of hospice settings, and claiming a definitive place within the hospice team.

The Veterans Benefits Administration (VBA) provides disability compensation to veterans with a service-connected injury, and to receive disability compensation from the Department of Veterans Affairs (VA), a veteran must submit a claim or have a claim submitted on his or her behalf. Evaluation of the Disability Determination Process for Traumatic Brain Injury in Veterans reviews the process by which the VA assesses impairments resulting from traumatic brain injury for purposes of awarding disability compensation. This report also provides recommendations for legislative or administrative action for improving the adjudication of veterans' claims seeking entitlement to compensation for all impairments arising from a traumatic brain injury.

New trends in mental healthcare practice and a rapid increase in the aged population are causing an explosion in the fields of clinical gerontology and geropsychology today. This comprehensive second edition handbook offers clinicians and graduate students clear guidelines and reliable tools for assessing general mental health, cognitive functioning, functional age, psychosocial health, comorbidity, behavior deficits, and more. Psychopathology, behavioral disorders, changes in cognition, and changes in everyday functioning are addressed in full, and a wide range of conditions and disorders common to this patient population are covered. Each chapter provides an empirical review of assessment instruments, assessment scales in their totality, a review of how these instruments are used with and adapted for different cultural groups, illustration of assessments through case studies, and information on how to utilize ongoing assessment in treatment and/or treatment planning. This combination of elements will make the volume the definitive assessment source for clinicians working with elderly patients. The most comprehensive source of up-to-date data on gerontological assessment, with review articles covering: psychopathology, behavioral disorders, changes in cognition, and changes in everyday functioning Consolidates broadly distributed literature into single source, saving researchers and clinicians time in obtaining and translating information and improving the level of further research and care they can provide Chapters directly address the range of conditions and disorders most common for this patient population - i.e. driving ability,

Acute Care for Elders (ACE) is a model of care designed to improve functional outcomes and to improve the processes for the care of older patients. This model includes: an environment of care designed to promote improved function for older patients; an interdisciplinary team that works together to identify/address the vulnerabilities of the older patients; nursing care plans for prevention of disability; early planning to help prepare the patient to return home and a review of medical care to prevent iatrogenic illness. Acute Care for Elders: A Model for Interdisciplinary Care is an essential new resource aimed at assisting providers in developing and sustaining an ACE program. The interdisciplinary approach provides an introduction to the key vulnerabilities of older adults and defines the lessons learned from the Acute Care for Elders model. Expertly written chapters describe critical aspects of ACE: the interdisciplinary approach and the focus on function. The fundamental principles of ACE described in this book will further assist hospital leaders to develop, implement, sustain and disseminate the Acute Care for Elders model of care. Acute Care for Elders: A Model for Interdisciplinary Care is of great value to geriatricians, hospitalists, advance practice nurses, social workers and all others who provide high quality care to older patients.

"We hope that the lives of all children will be filled with possibility, with open horizons and rainbows into the future. Children with serious illnesses, their families, and those who care for them, confront the realization that "not everything is possible," that despite dramatic scientific and medical advances, the lifespan of some children will be shortened. This

threat of premature loss heightens the sense of time for children and families alike, and challenges clinicians to create new pathways of hope for them"--

A NEW YORK TIMES BOOK CRITICS' TOP 10 BOOK OF THE YEAR "In its loving, fierce specificity, this book on how to die is also a blessedly saccharine-free guide for how to live" (The New York Times). Former NEA fellow and Pushcart Prize-winning writer Sallie Tisdale offers a lyrical, thought-provoking, yet practical perspective on death and dying in *Advice for Future Corpses (and Those Who Love Them)*. Informed by her many years working as a nurse, with more than a decade in palliative care, Tisdale provides a frank, direct, and compassionate meditation on the inevitable. From the sublime (the faint sound of Mozart as you take your last breath) to the ridiculous (lessons on how to close the sagging jaw of a corpse), Tisdale leads us through the peaks and troughs of death with a calm, wise, and humorous hand. *Advice for Future Corpses* is more than a how-to manual or a spiritual bible: it is a graceful compilation of honest and intimate anecdotes based on the deaths Tisdale has witnessed in her work and life, as well as stories from cultures, traditions, and literature around the world. Tisdale explores all the heartbreaking, beautiful, terrifying, confusing, absurd, and even joyful experiences that accompany the work of dying, including: *A Good Death: What does it mean to die "a good death"? Can there be more than one kind of good death? What can I do to make my death, or the deaths of my loved ones, good?* *Communication: What to say and not to say, what to ask, and when, from the dying, loved ones, doctors, and more.* *Last Months, Weeks, Days, and Hours: What you might expect, physically and emotionally, including the limitations, freedoms, pain, and joy of this unique time.* *Bodies: What happens to a body after death? What options are available to me after my death, and how do I choose—and make sure my wishes are followed?* *Grief: "Grief is the story that must be told over and over...Grief is the breath after the last one."* Beautifully written and compulsively readable, *Advice for Future Corpses* offers the resources and reassurance that we all need for planning the ends of our lives, and is essential reading for future corpses everywhere. "Sallie Tisdale's elegantly understated new book pretends to be a user's guide when in fact it's a profound meditation" (David Shields, bestselling author of *Reality Hunger*).

"This 5th edition is an important achievement; it is a symbol of commitment to the field of palliative nursing, where we have been and where we are going." - Betty Rolling Ferrell, PhD, MA, FAAN, FPCN, CHPN From the Foreword The aging population has only grown since the first edition of this comprehensive and seminal publication nearly 20 years

ago. Based on the need to humanize rather than medicalize the illness experience for patients, this text delves into palliative care beyond the specific diseases affecting the patient. Instead, content focuses on the whole person and family. Palliative patients struggle with chronic, debilitating, and painful conditions, and grapple with the fact that life as they knew it has already passed away. Families and friends reciprocally suffer, not knowing how to help and therefore become the secondary victims of the disease. This is not the challenge of a lone nurse, or a single physician, therapist, or social worker. Rather, palliative and hospice care requires the expertise and unique roles of an interprofessional team to help the patient and family strengthen their resilience, continue to find meaning and purpose in life, and cure what can be cured. Palliative Care Nursing, Fifth Edition, delivers advanced empirical, aesthetic, ethical and personal knowledge. This new edition brings an increased focus on outcomes, benchmarking progress, and goals of care. It expounds upon the importance of the cross-disciplinary collaboration introduced in the previous edition. Every chapter in Sections I, II, and III includes content written by a non-nursing member of the interprofessional team. Based on best-evidence and clinical practice guidelines, this text presents comprehensive, targeted interventions responsive to the needs of palliative and hospice patients and family. Each chapter contains compassionate, timely, appropriate, and cost-effective care for diverse populations across the illness trajectory. Key Features The expanded new edition offers current, comprehensive, one-stop source of highly-relevant clinical information on palliative care Life-span approach: age-appropriate nursing considerations (e.g. geriatric, pediatric and family) Includes disease-specific and symptom-specific nursing management chapters Promotes a holistic and interdisciplinary approach to palliative care Offers important legal, ethical and cultural considerations related to death and dying Case Studies with Case Study Conclusion in each clinical chapter New to The Fifth Edition: An expanded chapter on Palliative Care incorporates most up to date scope and standards, information on Basic and Advanced HPNA certification, self-reflection and self-care for nurses. A chapter on Interprofessional Collaboration Instructor Resources: Power points and Test bank

"The overarching purpose of this manual, reflecting the essential goals of hospice, is to help maximize the quality of living and dying of patients during the last phase of life. It will be through disciplined clinical uniformity and standardized practices that personalized, tailored care can then be aptly applied. And with that, hopes for individual epiphany may have the chance to be realized as those who entrust their care to us meet their earthly ends. With due regard for the complexities of peoples' lives, especially during severe illness, it is premised that identification and understanding of discrete situations (intertwined and enmeshed as they may be) will promote the elaboration of a care plan that will have the greatest likelihood of meeting these worthy ends"--

Originally published in 2001, the Textbook of Palliative Nursing has become the standard text for the field of hospice and

palliative care nursing. In this new edition, the authors and editors have updated each chapter to ensure that the content is evidence-based and current references are included. They also have retained the important focus on case studies throughout the text and practical, clinically-relevant tables, figures, and other resources. Like the previous edition, this text has an introductory section of the general principles of palliative care followed by a comprehensive section on symptom assessment and management encompassing twenty-one different symptoms. Other key sections include psychosocial support and spiritual care, providing holistic perspective on care of patients facing advanced disease. The text also includes an innovative section on special populations addressing those most in need of palliative care. The textbook is a useful resource for all nurses with the excellent section on end-of-life care across settings. In this new edition, the pediatric palliative care section has been greatly expanded and includes seven separate chapters on pediatric care. It includes a section on "special issues" addressing topics such as ethical considerations, nursing research, and public policy perspectives and concludes with a section presenting models of excellence including six international models. This edition also offers a narrative on dying based on a spouse's perspective. The text includes an appendix with an extensive list of resources for nurses in the field.

For patients and their loved ones, no care decisions are more profound than those made near the end of life.

Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages

who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. *Dying in America* evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

The expanded second edition of this key clinical reference provides the most up-to-date and comprehensive review of oncologic emergencies. It covers the diagnosis and management of the full range of emergencies caused directly by cancer and/or treatment, including chemotoxicity, radiotoxicity and post-surgical complications, as well as transplant-related issues and toxicities of novel antineoplastic agents and the new immunotherapies. The book also shows how the entire spectrum of clinical medicine is brought to bear in the care of cancer patients in the unique setting of the emergency department (ED), from health promotion and prevention, to treatment and palliative care. Recognizing the multiple, overlapping contexts in which emergency care of cancer patients occurs, the book addresses clinically crucial interdisciplinary topics such as the ethics of ED cancer care, analgesic misuse and abuse, informatics, quality improvement and more. Finally, perspectives on care system and social forces that shape ED cancer care, such as cancer care disparities and care models, frame the book as a whole. Edited and written by world-renowned experts in emergency medicine and oncology, the Second Edition of *Oncologic Emergency Medicine: Principles and Practice* is the definitive resource for emergency physicians, oncologists, internists, family physicians, emergency nurses, nurse practitioners, physician assistants, and policy makers as well as pre and postgraduate trainees.

Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. *Crossing the Quality Chasm* makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A

suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, *Crossing the Quality Chasm* also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

Homecare agency leaders expect staff to stay current on policies and procedures, complete documentation on time, and practice excellent patient care. But holding them accountable can be challenging because nurses, therapists, and aides work autonomously in the field. This manual delivers a simple, six-step plan that homecare leaders can use to build a culture of commitment and accountability. Discover real-world strategies that the author uses with her own staff with measurable results.

Physicians who care for patients with life-threatening illnesses face daunting communication challenges. Patients and family members can react to difficult news with sadness, distress, anger, or denial. This book defines the specific communication tasks involved in talking with patients with life-threatening illnesses and their families. Topics include delivering bad news, transition to palliative care, discussing goals of advance-care planning and do-not-resuscitate orders, existential and spiritual issues, family conferences, medical futility, and other conflicts at the end of life. Drs Anthony Back, Robert Arnold, and James Tulsky bring together empirical research as well as their own experience to provide a roadmap through difficult conversations about life-threatening issues. The book offers both a theoretical framework and practical conversational tools that the practising physician and clinician can use to improve communication skills, increase satisfaction, and protect themselves from burnout.
