About PowerPoint 2000 Traditionally, presenters have had to travel to reach audiences in different parts of the world. With today's technologies, this is no longer necessary. Using Microsoft PowerPoint 2000, presenters can now easily and inexpensively collaborate on presentations and show them to remote audiences without leaving their offices. PowerPoint 2000 offers new ease-of-use features that speed users through presentation development and help users deliver Web-based presentations to remote audiences. Let this NEW Made Simple book guide you through the new features of PowerPoint 2000 and help you make the most of the product.

How I Made 2,00,000 In The Stock Market Nicholas Darvas, author of How I Made 2,000,000 in the Stock Market, concluded that Wall Street was nothing more than a huge gambling casino. It bristled with dealers, croupiers and touts--and he explained all of this in a later highly successful book, Wall Street: The Other Las Vegas. How I Made 2,000,000 in the Stock Market is an extraordinary book. It tells one of the most unusual success stories in the history of the stock market. Darvas was not a stock market professional trading on inside information. He was one half of the highest paid dance

team in show business. Yet he was able to make himself a millionaire several times over by his unique investment approach. Unlike other so-called systems, it worked regardless of whether the market rose or fell. When news of Darvas' fantastic profits and methods leaked out, he was featured in Time Magazine. He then was persuaded to write a book which became an instant hit, selling nearly 200,000 copies in eight weeks. Many of the companies talked about in this book no longer exist. Many of the stocks are no longer traded. Nevertheless, the basic principles are as sound as ever.

"Made in California is divided into five twenty-year sections, each including a narrative essay discussing the history of that era and highlighting topics relevant to its visual culture."--BOOK JACKET.

A collection of 17 papers by graduate students, taken from a symposium held at Oxford in 2000, presenting new and on-going research on a variety of aspects of Egyptian society, art, culture and history. Subjects include: royal sculpture, women's public health, dental health, transportation of quarried stone, tomb construction, Byzantine Egypt, and much more.

Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS--three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the

silence that has surrounded medical errors and their consequence--but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda--with state and local implications--for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors--which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. *To Err Is Human* asserts that the problem is not bad people in health care--it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains

how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates--as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

the jetliner became the preferred means of travel. With these changes in transport mode came changes in immigration & refugee policy which are also discussed.

Explains the year 2000 date conversion computer problem and offers practical solutions to implement, as well as guidance on technical issues, the best tools, methodologies, and service providers

The book provides an introduction to Works 2000 for new users, with the assumption that the new Works user probably has little prior experience of computers. It starts with the basics of screen control and file management, then looks at each of the main components in turn. The focus is on what is being processed - text, numbers, etc - rather than the application being used, as the same techniques recur in different applications.

Thirty papers from the November 2000 conference present research results that encompass new communication technologies and enable novel networked applications. The major networking areas discussed are protocol design, implementation, and analysis; network QoS, error control, and service management; multicasting; TCP performance; and network end-to-end service and management.

Topics include hop integrity in computer networks, dynamic internet overlay deployment and management using the X-Bone, IP multicast fault recovery in PIM over OSPF, an image transport
