THE encyclopedic guide to hepatology – for consultation by clinicians and basic scientists Previously the Oxford Textbook of Clinical Hepatology, this two-volume textbook is now with Blackwell Publishing. It covers basic, clinical and translational science (converting basic science discoveries into the practical applications to benefit people). Edited by ten leading experts in the liver and biliary tract and their diseases, along with outstanding contributions from over 200 international clinicians, this text has global references, evidence and extensive subject matter – giving you the best science and clinical practice discussed by the best authors. It includes unique sections on: Symptoms and signs in liver disease Industrial diseases affecting the liver The effects of diseases of other systems on the liver The effects of liver diseases on other systems It's bigger and more extensive than other books and discusses new areas in more depth such as stem cells, genetics, genomics, proteomics, transplantation, mathematics and much more. Plus, it comes with a fully searchable CD ROM of the entire content. Click here to view a sample chapter on the liver and coagulation

Additionally, Mfn2 was shown to attenuate age-related changes in HSCs, connecting mitochondrial function and lifelong HSC homeostasis. Overall, these findings advance the fundamental role the mitochondrion has in HSC physiology and function, further resolving Mfn2 as an indispensable regulator of HSC biology.

The Cambridge HSC Biology Study Guide is a thorough topic-by-topic review of the revised HSC Biology course. It provides a comprehensive summary of all three core topics: 'Maintaining the Balance', 'Blueprint of Life' and 'The Search for Better Health', and three of the most popular option topics: 'Communication', 'Genetics: The Code Broken?' and 'The Human Story'. Written by experienced HSC teachers in a style accessible to students of all abilities, other features of the guide include: • Each topic broken down into easy to manage chapters • Exam style questions at the end of each chapter • Further exam style questions at the end of each topic • Solutions for all questions • A comprehensive glossary to help students remember and check essential terms • Explanation of exam verbs with specific reference to Biology Other books in the Cambridge HSC Study Guide series include: Mathematics Mathematics Extension 1 Chemistry Physics

Contains articles by different authors including Ian Biddle, Chris Greef, Maree Herrett, Debra Kelliher, Rodney Lane, Marshall Leaver, Robert Mulas, Sophie Mynott, Cameron Paterson, and Ross Todd.

Applies the Information Skills Process to the preparation of assessment tasks for the Biology, Business Studies, English, Geography, Modern History and Society and Culture HSC 2001 Syllabi.

Biology 2 HSC Course along with Biology 1 Preliminary Course are highly contemporary texts specifically for the Stage 6 Biology syllabus for Year 11 and 12 students in New South Wales. Written by experienced Biology educators and authors, it offers the most authoritative and in-depth coverage of the four Preliminary modules and the HSC topics, in an attractive visual format to stimulate students' interest and enhance their learning. In Biology 1 & Biology 2 the authors provide students with a solid grounding in biological concepts, an appreciation of the historical developments in the science, and fascinating insights into the people and technologies involved in current practice and research. Features Full-colour format with high-quality illustrations and stunning photographs Clear explanations of the syllabus content, with key ideas summaries and Quick-check questions interspersed regularly to check students' understanding The most up-to-date information on current biological research and technologies Case studies, people profiles and Odd Facts to sustain and extend students' interest Chapter reviews, with key work lists and a variety of questions, including web-based questions, that consolidate learning and encourage discussion and further research

What is the coronavirus, and why is everyone talking about it? Engagingly illustrated by Axel Scheffler, this approachable and timely book helps answer these questions and many more, providing children aged 5-10 and their parents with clear and accessible explanations about the coronavirus and its effects - both from a health perspective and the impact it has on a family's day-to-day life. With input from expert consultant Professor Graham Medley of the London School of Hygiene & Tropical Medicine, as well as advice from teachers and child psychologists, this is a practical and informative resource to help explain the changes we are currently all experiencing. The book is free to read and download, but Nosy Crow would like to encourage readers, should they feel in a position to, to make a donation to: <https://www.nhscharitiestogether.co.uk/>

Provides all the instructions and other information needed to carry out the mandatory experiments listed in column 3 of the NSW HSC Board of Studies Biology syllabus. In some cases, more than one experiment has been suggested.

The study of the biology of tumours has grown to become markedly interdisciplinary, involving chemists, statisticians, epidemiologists, mathematicians, bioinformaticians, and computer scientists alongside biologists, geneticists, and clinicians. The Oxford Textbook of Cancer Biology brings together the most up-to-date developments from different branches of research into one coherent volume, providing a comprehensive and current account of this rapidly evolving field. Structured in eight sections, the book starts with a review of the development and biology of multi-cellular organisms, how they maintain a healthy homeostasis in an individual, and a description of the molecular basis of cancer development. The book then illustrates, as once cells become neoplastic, their signalling network is altered and pathological behaviour follows. It explores the changes that cancer cells can induce in nearby normal tissue, the new relationship established between them and the stroma, and the interaction between the immune system and tumour growth. The authors illustrate the contribution provided by high throughput techniques to map cancer at different levels, from genomic sequencing to cellular metabolic functions, and how information technology, with its vast amounts of data, is integrated with traditional cell biology to provide a global view of the disease. The effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side, why some treatments succeed, and on the other, how they can affect the biology of resistant and recurrent disease. The book concludes by summarizing what we know to date about cancer, and in what direction our understanding of cancer is moving. Edited by leading authorities in the field with an international team of contributors, this book is an essential resource for scholars and professionals working in the wide variety of sub-disciplines that make up today's cancer research and treatment community. It is written not only for consultation, but also for easy cover-to-cover reading.

Popular with generations of practitioners, Brocklehurst's Textbook of Geriatric Medicine and Gerontology has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage

to help you meet the unique challenges posed by this growing patient population. Consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more make reference quick and easy, while over 255 illustrations compliment the text to help you find what you need on a given condition. Examples of the latest imaging studies depict the effects of aging on the brain, and new algorithms further streamline decision making. Emphasizes the clinical relevance of the latest scientific findings to help you easily apply the material to everyday practice. Features consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more that make reference quick and easy. Includes over 255 illustrations—including algorithms, photographs, and tables—that compliment the text to help you find what you need on a given condition. Provides summary boxes at the end of each chapter that highlight important points. Features the work of an expert author team, now led by Dr. Howard M. Fillit who provides an American perspective to complement the book's traditional wealth of British expertise. Includes an expanded use of algorithms to streamline decision making. Presents more color images in the section on aging skin, offering a real-life perspective of conditions for enhanced diagnostic accuracy. Includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging. Offers Grade A evidence-based references keyed to the relevant text.

The definitive NSW biology textbook, Biology in Context, has been completely revised and updated for the publication of its Third Edition in 2009. Written by biologists and biology teachers, Biology in Context 3rd Edition is the authoritative biology textbook for Preliminary and HSC students. With cutting edge content and new developments in biology covered, seamless adherence to the syllabus and tried-and-tested investigations, Biology in Context 3rd Edition will ensure success for more of your biology students. A brand new design with stunning photographic and illustrative sources will ensure greater accessibility for all students whilst the two-year format offers flexibility and encourages ongoing revision. Review by STANSW publication SEN

A comprehensive study guide covering the complete Preliminary mathematics course. Special features include a thorough and complete summary of each topic. Outcomes provided at the beginning of each chapter and important definitions and formulae. Complete and correct solutions provided for all questions. Suitable for 2001 HSC.

Cambridge Checkpoints HSC provides the most up-to-date exam preparation and revision for HSC students.

studyON; the next generation in online study, revision and exam practice! studyON is an interactive and highly visual online tool designed to help maximise your exam results. All the course content is presented within a system that is easy to navigate and tracks your progress. By using studyON you'll be able to clearly identify strengths and weaknesses prior to the exams. You can then confidently target areas of greatest need, enabling you to achieve your best results. The studyON booklets are also a great study companion as they contain an image of each online concept screen and practice questions with space for your working out and notes. studyON HSC Biology contains: ? past Board Of Studies exam questions online ? 700+ exam practice questions ? instant feedback ? online progress tracker ? videos and animations ? and much more! Change the way you approach study, revision and exam practice today with studyON! For students who do not wish to purchase the studyON booklet, there is an online only version of studyON available. Visit studyON HSC Biology (Online Purchase) Like us on Facebook:

"This easy-to-follow Macquarie Revision Guide for HSC Biology presents a concise, systematic review of coursework and practice in skills essential to high level performance in the HSC. It contains: a complete review of the core and the most popular options on the revised HSC course visual aids to learning and memory concise definition of key and specialised terms progressive Test yourself opportunities within each chapter HSC-style examination questions and suggested answers at the e
