The authors maintain that regions are the outcomes of a set of twin forces of globalization and regionalization. Therefore, each regional chapter stresses the global systems of connection that drive unique regional processes, making regions different. By studying regions, students not only learn the critical elements of different places, but also come to understand the fundamental processes that drive change. The Fifth Edition discusses geographies of emerging regions, incorporates cutting-edge data visualizations and infographics, including Quick Response codes linking to online media, features a completely modernized cartography program, and much more.

Human Geography: Places and Regions in Global Context takes a fresh approach to human geography, reflecting the major changes that have recently been impressed on global, regional, and local landscapes. These changes include the globalization of industry, the rise of China and India, the upwelling of ethnic regionalisms on the heels of decolonization and the formation of new states, the rapid urbanization of the periphery and the physical restructuring of cities, the transformation of traditional agricultural practices, the trend toward transnational

political and economic organizations, and the dramatic advances in information and communication technologies. Human Geography: Places and Regions in Global Context introduces the many new ideas, concepts, and theories that address these changes while also teaching the fundamentals of human geography: the principles, concepts, theoretical frameworks, and basic knowledge that are necessary to more specialized studies.

Geographies of Globalization 2nd edition offers an animated and fully-updated exposition of the geographical impacts of globalization and the contribution of human geography to studies and debates in this area. Energetic and engaging, this book:

- Illustrates how the core principles of human geography – such as space and scale – lead to a better understanding of the phenomenon
- Debates the historical evolution of globalized society
- Analyses the interconnected economic, political and cultural geographies of globalization
- Examines the impact of global transformations 'on the ground' using examples from six continents
- Discusses the three global crises currently facing the world – inequality, the environment and unstable capitalism most recently manifested in the Great Recession
- Articulates a human geographical framework for progressive globalization and approaching solutions to the problems we face

Boxed sections highlight key concepts and innovative work by geographers as well as topical and lively debates concerning current global trends. The book is also generously illustrated with a wide range of Figures, photographs, and maps.

Urbanization: An Introduction to Urban Geography, Third Edition captures the changes in the nature and outcomes of urbanization processes for people, as well as the development of new ways of thinking about urban geography. Unraveling the interlocking processes of urbanization, Knox and McCarthy present a vivid and meaningful explanation of constantly changing urban geographies and urban life. This framework supports the discussion of recent changes while addressing much of the traditional subject matter of urban geography. The book's dynamic approach also allows for integration of both theories and facts, where key concepts and theories are presented in relation to prior events and ideas—providing a coherent and comprehensive introduction to urban geography that is both a historical and process-oriented approach. With a U.S. focus that also offers global context and comparative international perspectives, the authors examine urban trends and their outcomes in both developed and less-developed countries to understand, analyze, and interpret the landscapes, economies, and communities of towns and cities around the world
