Coverage emphasizes essential themes throughout the book, including the building of better, faster, more competitive organizations through HRM; practical applications that help all managers deal with their personnel-related responsibilities; and technology and HR. Specific topics include the strategic role of human resource

management; equal opportunity and the law; job analysis; personnel planning and recruiting; employee testing and selection; interviewing candidates; training and developing employees; managing organizational renewal; appraising performance; managing careers and fair treatment; establishing pay plans; pay-for-performance and financial incentives; benefits and services; labor relations and collective bargaining; employee safety and health; managing human resources in an international business; human resources information systems and technology. For practicing Human Resource Managers as well as any business managers who deal with human resource/personnel issues. Information technology has had a profound effect on almost every aspect of our lives including the way we purchase products, communicate with others, receive health care services, and deliver education and training. It has also had a major impact on human resource management (HR) processes, and it has transformed the way that we recruit, select, motivate, and retain employees (Gueutal & Stone, 2005; Kavanagh, Thite, & Johnson, 2015). For example, some estimates indicated that 100 % of large organizations now use web-based recruiting (Sierra-Cedar, 2016-2017), and over half of the training conducted in America is delivered using technology-based methods (American Society for Training and Development, 2015). Results of a survey by the Society for Human Resource Management (SHRM) (2002) revealed that technology is one of the major drivers of change in today's HR departments. In spite of the increased use of technology in the field of HR, relatively little research has examined the acceptance and effectiveness of electronic human resource management (eHRM) methods. As a consequence, practitioners are implementing these new systems without the benefit of research. Thus, the primary purpose of this issue is to review the results of research on a number of important eHRM practices including e-recruitment, e-selection, gamification, e-socialization, e-learning, and e-performance management. It also considers how technology can be used to manage task-based contingent workers, and examines the problems associated with cyberdeviance in organizations. The chapters in this series should be extremely beneficial for HR researchers and practitioners who are employing these new systems. Since 1995, USC's Center for Effective Organizations (CEO) has conducted the definitive longitudinal study of the human resource management function in organizations. By analyzing new data every three years since then, the Center has been able to consistently chart changes in how HR is organized and managed, while at the same time providing guidance on how professionals in the field can drive firm performance. Global Trends in Human Resource Management, the seventh report from CEO, provides the newest findings about what makes HR successful and how it can add value to organizations today. Edward E. Lawler III and John W. Boudreau conclude that HR is most powerful when it plays a strategic role, makes use of information technology, has tangible metrics and analytics, and integrates talent and business strategies. To adapt to the demands of a changing global marketplace, HR is increasingly required to span the boundaries between its function, the organization as a whole, and the dynamic environment within which it operates. This report tracks changes in a global sample of firms that shows how HR differs across Europe, the U.S., and Asia, providing an international benchmark against which to measure a company's practice and shows how HR can adapt in a rapidly changing landscape.

Although construction is one of the most labour-intensive industries, people management issues are given inadequate attention. To help redress these problems, this book takes a broad view of HRM, examining the strategic and operational aspects of managing people within the construction sector. The book is aimed at project managers and students of project management who, until now, have been handed the responsibility for human resource management without adequate knowledge or training. The issues addressed in this book are internationally relevant, and are of fundamental concern to both students and practitioners involved in the management of construction projects. The text draws on the authors' experience of working with a range of large construction companies in improving their HRM operational activities at both strategic and operational levels, and is well illustrated with case studies of projects and organizations.
