Lemon-Aid New and Used Cars and Trucks 1990-2015 steers the confused and anxious buyer through the purchase of new and used vehicles unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than 42 years, pulls no punches.

Among the most adversely affected economies around the globe, none has sustained more loss than the made in the U.S.A label. The American worker has been neglected by our highest governing institutions far too long as our top legislators paved the way for corporate America in their quest for wealth and power under the guise of creating a new global economy. Put America first is decades overdue for our political leaders to protect the interest of the citizens they represent, equally to the powerful and privileged. After much research governing laws instituted, trade policies formulated and institutions created for the express benefit of multi-national corporations; The author has come to the final conclusion that while America slept, a silent form of political & economic terrorism over time crept in impacting the lively hood of middle-class America. Borrowing from the words of Paul Harvey, the world renown news commentator, Imperfect Partners tells "the rest of the story", in a way never told before!

"This book is a one of a kind, definitive reference source for technical students and researchers, government policymakers, and business leaders. It provides an overview of past and present initiatives to improve and commercialize fuel cell technologies. It provides context and analysis to help potential investors assess current fuel cell commercialization activities and future prospects. Most importantly, it gives top executive policymakers and company presidents with detailed policy recommendations as to what should be done to successfully commercialize fuel cell technologies."--pub. desc.

Co-published by Oxford University Press and the International Law Institute, and prepared by the Office of the Legal Adviser of the United States Department of State, the Digest of United States Practice in International Law presents an annual compilation of documents and commentary highlighting significant developments in public and private international law, and is an invaluable resource for practitioners and scholars in the field. Each annual volume compiles excerpts from documents such as treaties, diplomatic notes and correspondence, legal opinion letters, judicial decisions, Senate committee reports and press releases. All the documents which are excerpted in the Digest are selected by members of the Legal Adviser's Office of the U.S. Department of State, based on their judgments about the significance of the issues, their potential relevance to future situations, and their likely interest to practitioners and scholars. In almost every case, the commentary to each excerpt is accompanied by a citation to the full text. This volume is the comprehensive index for the Digest of United States Practice in International Law, covering the period 1989 - 2006, making it the long requested finding tool to the set.

Fuel cell systems have now reached a degree of technological maturity and appear destined to form the cornerstone of future energy technologies. But the rapid advances in fuel cell system development have left current information available only in scattered journals and Internet sites. The even faster race toward fuel cell commercialization further

Based on tests conducted by Consumers Union, this guide rates new cars based on performance, handling, comfort, convenience, reliability, and fuel economy, and includes advice on options and safety statistics.

This is the most recent report of the National Research Council's™ Standing Committee to Review the Research Program of the Partnership for a New Generation of Vehicles (PNGV), which has conducted annual reviews of the PNGV program since it was established in late 1993. The PNGV is a cooperative R&D program between the federal government and the United States Council for Automotive Research (USCAR, whose members are DaimlerChrysler, Ford Motor Company, and General Motors) to develop technologies for a new generation of automobiles with up to three times the fuel economy of a 1993 midsize automobile. The reports review major technology development areas (four-stroke direct-injection engines, fuel cells, energy storage, electronic/electrical systems, and structural materials); the overall adequacy of R&D efforts; the systems analysis effort and how it guides decisions on R&D; the progress toward long-range component and system-level cost and performance goals; and efforts in vehicle emissions and advanced materials research and how results target goals. Unlike previous reports, the Seventh Report comments on the goals of the program, since the automotive market and U.S. emission standards have changed significantly since the program was initiated.

Today's dynamic and uncertain environment has contributed to the changing nature of markets. In order for companies to keep up, they will need to embark on new wave marketing to ride the wave of opportunities provided by the changes in the environment, such as the digital revolution. This is critical all over the world, but none more so than in Asia. Asia is not only the world's biggest market, but also the fastest growing. It is therefore essential for marketers to understand the dynamics of Asian companies and what they have to offer to the wider world. This book analyzes competitive companies from 18 Asian countries that have successfully practiced new wave marketing and in so doing, provide invaluable lessons that others may find useful. Comprehensive case studies are used not only to describe how some of Asia's best companies compete, but also to analyze the concepts of new wave marketing their actions are based on. This book is unique in its depth and breadth of cases, from companies in the ASEAN region to North-east Asia, including Mongolia and SAARC. The authors of this book, Professor Philip Kotler, arguably the Father of Modern Marketing, Hermawan Kartajaya from Indonesia, and Hooi Den Huan from Singapore, are all experts in their field and have previously produced other bestsellers. This book, with its focus on real life examples of competitive Asian companies in the age of digitalization, complements the principles and theoretical frameworks of new wave marketing that are detailed in its sister book, Marketing for Competitiveness. Together, these books provide a comprehensive picture of the changing Asian marketing landscape.

Ford FE engines, which were manufactured from the late 1950s all the way through the mid-1970s, were designated as the large-displacement engines in the Ford lineup. FE means Ford Edsel, and reflects an era when Ford sought to promote the Edsel name. The design of these engines was implemented to increase displacement over its predecessor, the Y-Block engines of the previous decade. Early models were fairly modest in displacement, as were most big-blocks of the era, but they grew quickly to fill the needs of rapidly changing chassis requirements and consumer demand for larger vehicles. As it grew, the FE engine performed admirably as a heavy passenger car and light truck engine. It also became quite accomplished in performance circles, winning the 24 Hours of Le Mans, as well as powering Ford's muscle car and drag racing programs in the mid- to late 1960s. In this book, you will learn everything you need to know to rebuild one of these legendary engines. CarTech's unique Workbench series format takes you step-by-step through the entire rebuilding process. Covered are engine identification and selection, disassembly, cleaning, parts analysis and assessment, machine shop processes, replacement parts selection, re-assembly and start-up/break-in techniques. Along the way you find helpful tips on performance upgrades, trouble spots to look for, special tools required, and professional builder's tips. FE master, owner of Survival Motorsports, and veteran author Barry Raboutnick shares all of his tricks and secrets on building a durable and reliable FE engine. Whether you are simply rebuilding an old truck for reliable service use, restoring a 100-point show car, or building the foundation for a high-performance street and strip machine, this book will be an irreplaceable resource for all your future FE engine projects.

This book looks at Japanese companies in manufacturing and services sectors and how they are trying to emerge from the prolonged uncertainty of the pandemic. The chapters are written by those dealing with Japanese business under the shadow of the pandemic and being influenced by the continuous and rapid adoption of digital technologies in business and our daily lives. This book brings together the experiences of big and small corporations while looking at how digital transformation and the pandemic combined have led to a transformation in the product, production processes and services. It highlights the role played by robots, 3-D printing and renewable energy in manufacturing while the impact can be seen in the changes coming to future offices, how we work and interact and how we relax through tourism and travel on the service side. The services sector is as much impacted by digital transformation and the pandemic as any other field in business. Aimed at academics, researchers and practitioners, Japanese Business Operations in an Uncertain World will provide valuable insights into how Japanese organizations are adapting to the dual impact of the pandemic and advancements in digital technologies.

Electric and Hybrid Vehicles: Power Sources, Models, Sustainability, Infrastructure and the Market reviews the performance, cost, safety, and sustainability of battery systems for hybrid electric vehicles (HEVs) and electric vehicles (EVs), including nickel-metal hydride batteries and Li-ion batteries. Throughout this book, especially in the first chapters, alternative vehicles with different power trains are compared in terms of lifetime cost, fuel consumption, and environmental impact. The emissions of greenhouse gases are particularly dealt with. The improvement of the battery, or fuel cell, performance and governmental incentives will play a fundamental role in determining how far and how substantial alternative vehicles will penetrate into the market. An adequate recharging infrastructure is of paramount importance for the diffusion of vehicles powered by batteries and fuel cells, as it may contribute to overcome the so-called range anxiety." Thus, proposed battery charging techniques are summarized and hydrogen refueling stations are described. The final chapter reviews the state of the art of the current models of hybrid and electric vehicles along with the powertrain solutions adopted by the major automakers. Contributions from the world's leading industry and research experts Executive summaries of specific case studies Information on basic research and application approaches

While an ever-present and familiar toxin, carbon monoxide (CO) remains the number one poison in our environment. This silent killer is responsible for over 2,000 deaths a year in the United States alone. The public and healthcare communities need quality information about the many risks presented by carbon monoxide exposure. Edited by a leading expert in the field, Carbon Monoxide Poisoning delineates the successful means to prevent, identify, and manage the effects of CO poisoning. This volume explores new information on CO toxicity, including rehabilitation, the dissemination of information to the public, litigation involving CO poisoning, economic loss assessment, and firefighting. A series of chapters detail the risk of CO poisoning from kitchen ranges, recreational vehicles, and power boats. Expert contributors survey diagnostic procedures and devices, incorporating advances in brain SPECT imaging and non-invasive pulse-oximetry. The book includes chapters that specifically address the pros and cons of hyperbaric oxygen therapy and thoroughly review the physiological effects of acute and long term exposure to CO, as well as the neurocognitive and neurobehavioral sequelae. Whether you are a healthcare professional who treats CO poisoning, a lawyer involved in litigation for loss of life or property due to CO poisoning, or an engineer developing a well-insulated structure with sufficient ventilation; you will face the challenges raised by CO toxicology. Offering the only comprehensive reference on the subject, this multi-faceted guide takes an innovative look at how we can identify, treat, and prevent harmful exposure to carbon monoxide.

This book steers buyers through the the confusion and anxiety of new and used vehicle purchases unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than forty-five years, pulls no punches. Drivers buy more wheels and tires for their cars and trucks than any other aftermarket accessory. This book is a comprehensive source for wheel and tire information. Whether you want to know how your wheels and tires actually work and how they affect vehicle performance, or whether you just need advice as to what best suits your vehicle, this book provides the information you are looking for. This book covers daily use and competition cars and trucks, including off-road, circle track, drag, autocross, rally, and show vehicles. Beginning with a chapter on vehicle dynamics, with explanations of center of gravity, slip angle, yaw, roll, and pitch. Author Richard Newton then moves on to general information about tires and wheels--from materials and construction to use and maintenance. He also explores how this general information applies to specific types of vehicles, using pertinent examples throughout.
