

I Quaderni Del Bridge 6

From an international and comparative perspective, young people's access to the labour market is a complex issue with certain contradictory aspects reflecting the level of development of labour law and industrial relations in their respective countries. In the most advanced economies, there has been a steady increase in the age at which young people exit the educational system and enter the labour market, giving rise to significant economic and social problems. The increase in levels of educational attainment is associated in some cases with an alarming rate of unemployment among those with academic qualifications, while employers encounter considerable difficulty in recruiting workers for unskilled and semi-skilled positions. The economies of developing countries, on the other hand, are characterized by different trends, reminiscent of the early stages of modern labour law, with the large-scale exploitation of young workers and children, many of whom join the flow of migrants towards the more highly developed regions of the world, with the consequent risk of impoverishing human capital in the country of origin. The ADAPT Labour Studies Book-Series has in connection been set up with a view to achieving a better understanding of these and other issues in the field of Labour and Employment relations in a global dimension, through an interdisciplinary and comparative approach.

Includes Part 1A: Books and Part 1B: Pamphlets, Serials and Contributions to Periodicals

The relationship between legislatures and executives in national parliaments is well documented. That between legislatures and citizens is relatively neglected. These writings on that relationship in a number of European states fill the gap.

Examines the relation between imperialism and religion through the practice of good government in Spanish Naples. Ideal for courses on the Renaissance, imperialism, the Spanish world, European history, diplomatic-international relations and the general reader interested in cultural history, Renaissance Italy, social minorities, and religious rituals. Without overlooking the role of coercive force in the maintenance (or overthrow) of social structures, Lincoln argues his thesis with rich illustrations drawn from such diverse areas as Platonic philosophy, the Upanishads of India, ancient Celtic banquets, professional wrestling, and the Spanish Civil War. This wide-ranging interdisciplinary study--which draws on works in history, semiotics, anthropology, sociology, classics, and indology--offers challenging new insights into the complex dynamics of social cohesion and change. The second edition includes three new chapters, new images, and an updated bibliography. Although the disciplines of architecture and structural engineering have both experienced their own historical development, their interaction has resulted in many fascinating and delightful structures. To take this interaction to a higher level, there is a need to stimulate the inventive and creative design of architectural structures and to persuade. This book covers a broad spectrum of topics, from experimental philosophy and cognitive theory of science, to social epistemology and research and innovation policy. Following up on the previously published Volume 1, "Mind, Rationality, and Society," it provides further applications of methodological cognitivism in areas such as scientific discovery, technology transfer and innovation policy. It also analyzes the impact of

cognitive science on philosophical problems like causality and truth. The book is divided into four parts: Part I “Experimental Philosophy and Causality” tackles the problem of causality, which is often seen as straddling metaphysics, ontology and epistemology. Part II “Cognitive Rationality of Science” deals with the cognitive foundation of scientific rationality, starting from a strong critique of the neopositivist rationality of science on the one hand and of the relativist and social reduction of the methodology of science on the other. Part III “Research Policy and Social Epistemology” deals with topics of social epistemology, science policy and culture of innovation. Lastly, Part IV “Knowledge Transfer and Innovation” addresses the dynamics of knowledge generation, transfer and use in technological innovation.

The Roads of Roman Italy offers a complete re-evaluation of both the evidence and the interpretation of Roman land transport. The book utilises archaeological, epigraphic and literary evidence for Roman communications, drawing on recent approaches to the human landscape developed by geographers. Among the topics considered are: * the relationship between the road and the human landscape * the administration and maintenance of the road system * the role of roads as imperial monuments * the economics of road construction and urban development.

V.G. Kiernan is recognized as one of the most remarkable historians of the twentieth century. Eric Hobsbawm says of Kiernan that his knowledge is "encyclopedic" and Edward Said refers to his writings on imperialism as "milestones." In *Imperialism and Its Contradictions*, Kiernan critically addresses the origins, consequences and legacies of modern imperialism and colonialism, discussing the imperial experience in its totality. Sensitive to the tragic and ironic character of human history, Kiernan considers and reflects upon the political, economic and cultural dimensions of the imperial experience and how it has shaped the lives and social orders of Europeans and non-Europeans alike. Issues treated in *Imperialism and Its Contradictions* include the question of the relationship between the rise of capitalism and the making of Europe's overseas empires; the creation of colonial armies and their political uses; the dialectic of imperialism and revolution; the impact of imperialism on European culture; and the social and cultural problems confronting a post-imperial and multicultural Britain. The book also includes Kiernan's discussion of the work of Antonio Gramsci and its implications for the study of imperialism.

Robert Cox's writings have had a profound influence on recent developments in thinking in world politics and political economy in many countries. This book brings together for the first time his most important

essays, grouped around the theme of world order. The volume is divided into sections dealing respectively with theory; with the application of Cox's approach to recent changes in world political economy; and with multilateralism and the problem of global governance. The book also includes a critical review of Cox's work by Timothy Sinclair, and an essay by Cox tracing his own intellectual journey. This volume will be an essential guide to Robert Cox's critical approach to world politics for students and teachers of international relations, international political economy, and international organisation. Following the tradition and style of the acclaimed Index Islamicus, the editors have created this new Bibliography of Art and Architecture in the Islamic World. The editors have surveyed and annotated a wide range of books and articles from collected volumes and journals published in all European languages (except Turkish) between 1906 and 2011. This comprehensive bibliography is an indispensable tool for everyone involved in the study of material culture in Muslim societies.

Venetian art - Venice - Themes and motives - Narrative painting Renaissance Italy.

A comprehensive survey of how scientific disciplines have always been informed by politics and ideology on the basis of the Gramscian views in historical materialism, hegemony and civil society.

Beginning with the first settlements in the Paleolithic, and ending with the Roman period, this book brings together in a

single volume the latest research in Sardinian studies. This Festschrift includes discussions over the nature of Paleolithic settlement on Sardinia, and presents new data on Neolithic chronology, architecture, religion, settlement patterns and metallurgy. The relations between Phoenician, Punic, Greek and Roman colonists and the indigenous Sards in the Iron Age are also treated.

This book examines the Accademia degli Arcadi in its heyday, a little known phenomenon in Italian history in the first part of the eighteenth century. The Roman academy aimed for a peninsula-wide cultural renewal induced by literary reform. Operating within a papal-court society, it eschewed extant patronage systems and social hierarchies and introduced enlightened ideas to its members. By about 1730, the Arcadi was on the wane, the reform largely unmet. It was an easy target for critics, both its proponents and opponents, in part because of the visible role it assigned to women. By attending to the institution's policies, this book provides a rich understanding of the Arcadi's goals. It locates the organization's interest in theater, including the physical environment of the theatrical drama, as central to its operations.

This is the first volume ever to systematically study the subject of disabilities in the Roman world. The contributors examine the topic from head to toe: mental and intellectual disability, alcoholism, visual impairment, speech disorder, hermaphroditism, monstrous births, mobility problems, osteology and visual representations of disparate bodies. Masonry constructions are the great majority of the buildings in Europe's historic centres and the most important monuments of its architectural heritage. Given the age of these constructions, the demand for safety assessments and restoration projects is pressing and constant; still within the broad studies in the subject it is not yet recognised, in

particular within the seismic area, a unitary approach to deal with Masonry structures. This successful book contributes to clarify the issues with a rigorous approach offering a comprehensive new Statics of Masonry Constructions. This third edition has been driven by some recent developments of the research in the field, and it gives the fundamentals of Statics with an original and rigorous mathematical formulation, further in-depth inquired in this new version. With many refinements and improvements, the book investigates the static behaviour of many historic monuments, such as the Gothic Cathedrals, the Mycenaean Tholoi, the Pantheon, the Colosseum, the domes of Santa Maria del Fiore in Florence and St Peter's in Rome, as well as the Leaning Tower of Pisa. The last chapter – the 11th - regarding the behaviour of masonry buildings under seismic actions, has been modified and integrated in order to take into account the numerous recent achievements of the research in the dynamic and seismic analysis. The focal point is that there's no dissipation of energy during the deformation of masonry structures, even if accompanied by cracks. If properly reinforced, masonry constructions have the sole resource to escape the seismic action developing the rocking without failure, under alternate seismic action. In this context, the rocking of pier walls, the main resistant components of the masonry structure, has been here thoroughly examined. Furthermore, the out of plane and the in-plane seismic strengths of masonry walls with openings has been investigated within the framework of Limit Analysis. Through an interdisciplinary approach, involving Mathematics, Engineering and Architecture, this book highlights the tight connection existing between the Statics of Masonry constructions and the principles that ruled the history of constructions, since the beginnings as far as the Seventeenth century.

Examines the developments that paved the way for the

Surrealist movement in literature and art.

Written by some of the most outstanding researchers in the field of Jewish history, this collection offers a rich and consistent picture of the main developments in communications in the Jewish world before the era of the mass-media. This pioneering research deals with both the techniques of communications and linguistic developments in communities widely separated between Europe, North Africa, and the Levant.

All Religion Is Inter-Religion
analyses the ways inter-religious relations have contributed both historically and philosophically to the constructions of the category of "religion" as a distinct subject of study. Regarded as contemporary classics, Steven M. Wasserstrom's *Religion after Religion* (1999) and *Between Muslim and Jew* (1995) provided a theoretical reorientation for the study of religion away from hierophanies and ultimacy, and toward lived history and deep pluralism. This book distills and systematizes this reorientation into nine theses on the study of religion. Drawing on these theses--and Wasserstrom's opus more generally--a distinguished group of his colleagues and former students demonstrate that religions can, and must, be understood through encounters in real time and

space, through the complex relations they create and maintain between people, and between people and their pasts. The book also features an afterword by Wasserstrom himself, which poses nine riddles to students of religion based on his personal experiences working on religion at the turn of the twenty-first century.

Includes entries for maps and atlases.

Philosophy, Religion, Social sciences, Law, Education, Economy, Exact and natural sciences, Medicine, Science and technology, Agriculture, Management, Architecture, Art, History, Sport, Biography, Literature.

At publication date, a free ebook version of this title will be available through Luminos, University of California Press's Open Access publishing program. Visit www.luminosoa.org to learn more. Flight during times of persecution has a long and fraught history in early Christianity. In the third century, bishops who fled were considered cowards or, worse yet, heretics. On the face, flight meant denial of Christ and thus betrayal of faith and community. But by the fourth century, the terms of persecution changed as Christianity became the favored cult of the Roman Empire. Prominent Christians who fled and survived became founders and influencers of Christianity over time. *Bishops in Flight* examines the various ways these episcopal leaders both appealed to and altered the discourse of Christian flight to defend

their status as purveyors of Christian truth, even when their exiles appeared to condemn them. Their stories illuminate how profoundly Christian authors deployed theological discourse and the rhetoric of heresy to respond to the phenomenal political instability of the fourth and fifth centuries.

Margaret Plant presents a wide-ranging cultural history of the city from the fall of the Republic in 1797, until 1997, showing how it has changed and adapted and how perceptions of it have shaped its reality.

In recent years, the European Commission has attached increasing importance to the use of financial engineering instruments rather than traditional grant-based financing for the microcredit sector, considering these to be the most efficient option available. This book presents a study of capacity building and structural funds in public managing authorities for the microcredit sector. It presents two surveys to highlight the strengths and weaknesses of the managing authorities' capacity building. The first survey investigates the authorities' need for and interests in capacity building activities, assessing the areas in which capacity building support is needed, and explores the different types of support offered. The second survey analyses the results of the microcredit and microfinance programming activity, investigating its target groups and other operational features. It examines the key

monitoring and reporting issues involved in this activity, before analysing the regulatory framework of the microcredit and microfinance sector. This book presents an in-depth analysis of structural funds and their management by policy-makers in the European convergence regions. It explores the interests of managing authorities, microcredit institutions, operators and other financial intermediaries involved in microcredit programming activities, and offers some core strategic and operational recommendations for the use of structural funds in the microcredit sector.

Articolato in un solo tomo, il Notiziario 2010 contiene, in apertura, gli Atti del convegno in onore di Valerio Cianfarani dal titolo “Valerio Cianfarani e le culture medioadriatiche”, tenutosi a Chieti e Teramo dal 27 al 29 giugno 2008. Gli Atti sono curati da Emanuela Ceccaroni, Amalia Fastoferri e Andrea Pessina. Il volume include le consuete due sezioni dedicate alle Notizie e alle Attività Varie. Le prime, suddivise per province, accolgono le relazioni degli interventi effettuati nel corso del 2010 dalla Soprintendenza, sia direttamente che indirettamente attraverso il controllo e/o la partecipazione a scavi, ricerche e studi di archeologia di Università, cooperative o società archeologiche, gruppi archeologici e centri di ricerca italiani e stranieri. L'ultima sezione contiene brevi notizie sugli eventi, mostre, laboratori scolastici collegati alla

Soprintendenza archeologica.
