When her identity's exposed, hiding on a lawman's family ranch is her last hope. After her mother is killed, Melissa Morgan's shocked to learn she's spent her life in witness protection. Now it's US marshal Miles Avery's job to keep her and her little boy safe. And with a mole in his agency, the only way to evade the killer is to hide Melissa on Miles's family ranch...and pretend she's his wife for the holidays.

"Deals with safety aspects of transformers, reactors, power supply units and combinations thereof such as electrical, thermal and mechanical safety. This document covers the following independent or associated stationary or portable types of dry-type transformers, power supply units, including switch mode power supply units, reactors and combinations thereof in the field of safety. The windings can be encapsulated or non-encapsulated. They are not forming a part of the distribution network. This edition constitutes a technical revision and includes many significant technical changes with respect to the previous edition. Adopted with national modifications from, and includes the text of, IEC 61558-1 Ed 3."--Standards New Zealand website. This standard specifies the terminology and definition, technical parameters, charging mode, classification and functional definition, structural dimensions, performance requirements, test methods and inspection rules for the conductive charge coupler of electric vehicles.

This Part of GB 2099 applies to plugs and fixed or portable socket-outlets for a.c. only, with or without earthing contact, with a rated voltage greater than 50 V but not exceeding 440 V and a rated current not exceeding 32 A, intended for household and similar purposes, either indoors or outdoors.

The IBM® TS4500 (TS4500) tape library is a next-generation tape solution that offers higher storage density and better integrated management than previous solutions. This IBM Redbooks® publication gives you a close-up view of the new IBM TS4500 tape library. In the TS4500, IBM delivers the density that today's and tomorrow's data growth requires. It has the cost-effectiveness and the manageability to grow with business data needs, while you preserve investments in IBM tape library products. Now, you can achieve a low cost per terabyte (TB) and a high TB density per square foot because the TS4500 can store up to 11 petabytes (PB) of uncompressed data in a single frame library or scale up to 2 PB per square foot to over 350 PB. The TS4500 offers the following benefits: High availability: Dual active accessors with integrated service bays reduce inactive service space by 40%. The Elastic Capacity option can be used to eliminate inactive service space. Flexibility to grow: The TS4500 library can grow from the right side and the left side of the first L frame because models can be placed in any active position. Increased capacity: The TS4500 can grow from a single L frame up to another 17 expansion frames with a capacity of over 23,000 cartridges. High-density (HD) generation 1 frames from the TS3500 library can be redeployed in a TS4500. Capacity on demand (CoD): CoD is supported through entry-level, intermediate, and base-capacity configurations. Advanced Library Management System (ALMS): ALMS supports dynamic storage management, which enables users to create and change logical libraries and configure any drive for any logical library. Support for IBM TS1160 while also supporting TS1155, TS1150, and TS1140 tape drive: The TS1160 gives organizations an easy way to deliver fast access to data, improve security, and provide long-term retention, all at a lower cost than disk solutions. The TS1160 offers high-performance, flexible data storage with support for data encryption. Also, this enhanced fifth-generation drive can help protect investments in tape automation by offering compatibility with existing automation. The TS1160 Tape Drive Model 60E delivers a dual 10 Gb or 25 Gb Ethernet host attachment interface that is optimized for cloud-based and hyperscale environments. The TS1160 Tape Drive Model 60F delivers a native data rate of 400 MBps, the same load/ready, locate speeds, and access times as the TS1155, and includes dual-port 16 Gb Fibre Channel support. Support of the IBM Linear Tape-Open (LTO) Ultrium 8 tape drive: The LTO Ultrium 8 offering represents significant improvements in capacity, performance, and reliability over the previous generation, LTO Ultrium 7, while still protecting your investment in the previous technology. Support of LTO 8 Type M cartridge (m8): The LTO Program introduced a new capability with LTO-8 drives. The ability of the LTO-8 drive to write 9 TB on a brand new LTO-7 cartridge instead of 6 TB as specified by the LTO-7 format. Such a cartridge is called an LTO-7 initialized LTO-8 Type M cartridge. Integrated TS7700 back-end Fibre Channel (FC) switches are available. Up to four library-managed encryption (LME) key paths per logical library are available. This book describes the TS4500 components, feature codes, specifications, supported tape drives, encryption, new integrated management console (IMC), command-line interface (CLI), and REST over SCSI (RoS) to obtain status information about library components. October 2020 - Added support for the 3592 model 60S tape drive that provides a dual-port 12 Gb SAS (Serial Attached SCSI) interface for host attachment.

The author of this immensely thought-provoking book points out that Zero Failure Performance is a realistic and easily attainable target. The book gives a number of simple DOs and DON'Ts which the supervisors and engineers can follow to attain the goal of zero failure performance. Written in an easy and non-jargonistic style, the book should be of tremendous use to front-line electrical supervisors, engineers and managers of all industries which generate, distribute, and utilize electrical energy. The text is suitably aided by a number of illustrations, charts, tables and photographs

This standard applies to portable devices performing simultaneously the functions of detection of the residual current, of comparison of the value of this current with the residual operating value and of opening of the protected circuit when the residual current exceeds this value.

Technical Film and TV for Nontechnical People introduces film students, actors, producers and other nontechnical film people to the technical aspects that everyone working on a film set should know. Author Drew Campbell is a lighting and sound designer for Universal Studios who started out in theater and who was struck by the complex technical procedures and idiosyncratic expressions that he encountered on his first weeks on the set. Topics explained: Who does what on a film set: the roles of technical and non-technical team members Seeing a script: turning a story into a storyboard and then into a production Shooting on film or video: when each format is best used The parts of a camera: how it functions and how actors can best cooperate with it Sound: the process of recording and editing Shooting: the geography and schedule of a set and "getting the shot" Postproduction: editing, continuity, and the dailies

"The objective of this standard is to outline equipment, methods, and terminology for performance monitoring and analysis of photovoltaic (PV) systems. This Standard addresses sensors, installation, and accuracy for monitoring equipment in addition to measured parameter data acquisition and quality checks, calculated parameters, and performance metrics. In addition, this Standard serves as a basis for other standards which rely upon the data collected." --Taken from the preface.
