The past, present, and possible future of the agency designed to act as "the world's environmental conscience." The United Nations Environmental Programme (UNEP) was founded in 1972 as a nimble, fast, and flexible entity at the core of the UN system--a subsidiary body rather than a specialized agency. It was intended to be the world's environmental conscience, an anchor institution that established norms and researched policy, leaving it to other organizations to carry out its recommendations. In this book, Maria Ivanova offers a detailed account of UNEP's origin and history. Ivanova counters the common criticism that UNEP was deficient by design, arguing that UNEP has in fact delivered on much (though not all) of its mandate.

This is the story of how France's famed cultural icon, one of the most controversial and supremely public buildings of the century, was designed and built. Nathan Silver's detailed account of the Centre Pompidou -- still called Beaubourg by its designers, and by Parisians -- takes the form of a fascinating and insightful "building biography." Not just a book about a building but about the making of a building, this fresh, heterodox means of inquiry is a holistic reading of the intricate process of creating architecture in contemporary society that brings to light its human story, encompassing its stylistic, historical, technical, and social aspects. Beaubourg, Silver reveals, was unlike anything that had ever been built. A realization of ideals and aspirations of its architectural generation, a rethinking of fundamental precepts of design and construction, it took nothing for granted, and it has since become one of the most popular tourist attractions in Europe -- flaunting new principles that other architects have to come to terms with. This paper discusses about countries that must chart their own paths to effectively balance the potential benefits against the risks and challenges, including institutional and capacity constraints, privacy concerns, and new avenues for fraud and evasion. The digital revolution holds vast potential for fiscal policies. By transforming the way fiscal systems collect, process, and act on information, it can expand and reshape the way governments design and implement their tax, spending, and macro-fiscal policies. Countries will need to chart a path based on their individual circumstances—either by taking incremental steps to digitize, or by leapfrogging to newer and more sophisticated methods of policy formulation and implementation. A recurring theme in this book is the need for greater regional coordination in finding solutions to address the Caribbean's shared and intertwined macroeconomic and structural challenges. The analysis suggests that strengthening regional and global market integration of Caribbean economies would provide an impetus to sustained growth in incomes and jobs.

Using a cross-country sample of 169 IMF-supported programs and detailed studies of 15 programs, this evaluation report examines various aspects of fiscal adjustment in IMF-supported programs. It presents evidence that does not support some critics' view that IMF-supported programs typically adopt a one-size-fits-all approach to fiscal adjustment, nor the perception that programs always involve austerity by targeting reductions in public spending. The report also proposes a number of recommendations for IMF surveillance and program design in the future.

Describing how formerly secretive financial institutions have been slow to accept responsibility for the consequences of their investments - especially the problems that can result from projects in developing countries - she shows that financing institutions can cause significant social and environmental damage and argues that new accountability mechanisms are necessary to reduce or prevent such damage. Because such institutions operate on a global scale, only semi-judicial accounting mechanisms can provide the necessary accountability. It is time for the private financial sector to follow multilateral financial institutions in creating independent mechanisms, mediation procedures, and access to decision makers for people harmed or potentially harmed by projects financed by their institutions.
