Exploring Interconnectedness Katja Gorbahn, Erla Hallsteinsdóttir, Jan Engberg, 2023-06-22 This volume explores the socio-cultural and media background of a critical and ongoing political challenge: the complex entanglement between European integration and strong national agendas in the context of globalisation. It does so using educational media - both textbooks and digital media - as sites of cultural contestation to enquire into the intricate relationships around national and European identities and aspects of students' knowledge and reception. Using a variety of methods and technologies, the chapters analyse identity constructions present in educational media discourses, embedded as they are in their national and European contexts and as both the catalysts and products of their time. The book is a study of the post-digital condition in an educational context, exploring the potential of digital humanities and linguistic approaches for educational media research and employing methods such as eye-tracking or concept maps.

Tartaglia's Science of Weights and Mechanics in the Sixteenth Century Raffaele Pisano, Danilo Capecchi, 2015-08-25 This book presents a historical and scientific analysis as historical epistemology of the science of weights and mechanics in the sixteenth century, particularly as developed by Tartaglia in his *Quesiti et inventioni diverse*, Book VII and Book VIII (1546; 1554). In the early 16th century mechanics was concerned mainly with what is now called statics and was referred to as the *Scientia de ponderibus*, generally pursued by two very different approaches. The first was usually referred to as Aristotelian, where the equilibrium of bodies was set as a balance of opposite tendencies to motion. The second, usually referred to as Archimedean, identified statics with *centrobarica*, the theory of centres of gravity based on symmetry considerations. In between the two traditions the Italian scholar Niccolò Fontana, better known as Tartaglia (1500?-1557), wrote the treatise *Quesiti et inventioni diverse* (1546). This volume consists of three main parts. In the first, a historical excursus regarding Tartaglia's lifetime, his scientific production and the *Scientia de ponderibus* in the Arabic-Islamic culture, and from the Middle Ages to the Renaissance, is presented. Secondly, all the propositions of Books VII and VIII, by relating them with the *Problemata mechanica* by the Aristotelian school and *Iordanus opusculum de ponderositate* by Jordanus de Nemore are examined within the history and historical epistemology of science. The last part is relative to the original texts and critical

transcriptions into Italian and Latin and an English translation. This work gathers and re-evaluates the current thinking on this subject. It brings together contributions from two distinguished experts in the history and historical epistemology of science, within the fields of physics, mathematics and engineering. It also gives much-needed insight into the subject from historical and scientific points of view. The volume composition makes for absorbing reading for historians, epistemologists, philosophers and scientists.
