This is a book that helps children learn their ABC's while learning about birds at the same time. Twenty-three of the 26 letters of the alphabet are accompanied by a full-page, full-color drawing of a bird whose name starts with that letter, such as Robin for "R.." Each letter is also accompanied by a description of the bird, including its scientific name. This will be instructive for older children. The author also includes what she calls "nonsense rhymes" for younger children for each bird. These little poems are really very

sensible and much above the average of verse for children -- such as these witty line of the Ibis: "That bill it is so very long, Your shortest note must be a song." We heartily recommend her book for holiday time and all times. Included in this Illustrated Edition of ABC Book of Birds are all 23 original illustrations, in color, rejuvenated.

Before Audubon, there was Buffon's *Histoire naturelle, générale et particulière*, originally published in thirty-six volumes between 1749 and 1778. All the World's Birds comprises selections from the original, which explored all flora and fauna, and features the beautiful full color illustrations by François-Nicolas Martinet. —NPR In *What It's Like to Be a Bird*, David Sibley answers the most frequently asked questions about the birds we see most often. This special, large-format volume is geared as much to nonbirders as it is to the out-and-out obsessed, covering more than two hundred species and including more than 330 new illustrations by the author. David Sibley's exacting artwork and wide-ranging expertise bring observed behaviors vividly to life. (For most species, the primary illustration is reproduced life-sized.) And while the text is aimed at adults—including fascinating new scientific research on the myriad ways birds have adapted to environmental changes—it is nontechnical, making it the perfect occasion for parents and grandparents to share their love of birds with young children, who will delight in the big, full-color illustrations of birds in action. Unlike any other book he has written, *What It's Like to Be a Bird* is poised to bring a whole new audience to David Sibley's world of birds.

Differences are gorgeously illustrated in a heartwarming picture book about a colorless peacock who learns to love himself in a jungle full of color. Mo has always felt a little different. While all the other peacocks grew bright, bold, beautiful feathers in rich greens and vibrant blues, Mo's feathers grew in a snowy white. And even though Mo's friends try to include him in their playtime, Mo doesn't like to be reminded that he's different from his friends. But when a storm threatens to ruin the group's annual celebration, Mo must learn to stand tall, strut his stuff, and shake his brilliantly glowing tail feathers--in a way only he can--to help his friends and set things right. From debut author Sita Singh, and brought to life by Stephanie Fizer Coleman, comes a story about finding strength in the things that make us different, and beauty in all its forms.

Another Book About Birds is about birds. Sometimes. Sometimes it isn't about birds. Not all the time, but frequently. What the Hell do I know, anyway. I wrote the damn thing and now they want me to write this thing. I'm not supposed to use "I" language because it makes it sound more official. Like some guy with a mustache and a fancy hat wrote this. Somebody that reads the New Yorker, or something. Somebody with stocks. Somebody who defends Ayn Rand. AYN RAND! Well

this ain't that, jack. Your guess is as good as mine. Sometimes it's fun, sometimes it's a bummer, but I like it. I think you will, too. If you don't, keep it round. Books make you look smart.

Birds come in all sizes, shapes, and colors. Birds are magic. Birds are everywhere. If you listen very carefully you will hear them, no matter where you live. And if you look very closely you will see them, no matter where you are. And if you can't go outside right this minute, you can always read this book!

A stunningly illustrated look at the mating and parenting lives of the world's birds Bird Love looks at the extraordinary range of mating systems in the avian world, exploring all the stages from courtship and nest-building to protecting eggs and raising chicks. It delves into the reasons why some species, such as the wattled jacana, rely on males to do all the childcare, while others, such as cuckoos and honeyguides, dump their eggs in the nests of others to raise. For some birds, reciprocal promiscuity pays off: both male and female dunnocks will rear the most chicks by mating with as many partners as possible. For others, long-term monogamy is the only way to ensure their offspring survive. The book explores the wide variety of ways birds make sure they find a mate in the first place, including how many male birds employ elaborate tactics to show how sexy they are. Gathering in leks to display to females, they dance, pose, or parade to sell their suitability as a mate. Other birds attract a partner with their building skills: female bowerbirds rate brains above beauty, so males construct elaborate bowers with twig avenues and cleared courtyards to impress them. Looking at the differing levels of parenting skills across species around the world, we see why a tenth of bird species, including the fairy-wrens of Australia, have helpers at the nest who forgo their own reproduction to assist the breeding pair; how brood parasites and their hosts have engaged in evolutionary arms races; and how monogamous pairs share—or relinquish—their responsibilities. Illustrated throughout with beautiful photographs, Bird Love is a celebration of the global diversity of avian reproductive strategies.

Featuring nearly 200 entries—on topics ranging from plumage and migration to birds in art, literature, and folklore—this enticing collection is brimming with wisdom and wit about all things avian. Leahy shares illuminating insights about pioneering ornithologists such as John James Audubon and Florence Bailey, and describes unique bird behaviors such as anting, caching, duetting, and mobbing. He discusses avian fossils, the colloquial naming of birds, the science and history of ornithology, and more.
